# **SOI BULLETIN**

A Quarterly Statistics of Income Report

#### Volume 15, Number 4

The Statistics of Income (SOI) Bulletin is issued quarterly, in July, October, January and April, by the Statistics of Income Division of the Internal Revenue Service. The report provides the earliest published annual financial statistics obtained from the various types of tax and information returns filed, as well as information from periodic or special analytical studies of particular interest to students of the U.S. tax system, tax policymakers and tax administrators. It also includes personal income and tax data by State and historical data for selected types of taxpayers, in addition to data on tax collections and refunds and on other tax-related items.

Information on the availability of supplemental data on the topics included in this issue, special tabulations undertaken on a reimbursable basis, or other SOI subjects, may be obtained by telephoning the SOI Statistical Information Services office (202-874-0410), or by writing to the Director, Statistics of Income Division CP:R:S, Internal Revenue Service, P.O. Box 2608, Washington, D.C. 20013-2608.

Beth Kilss and Tom Petska of the Statistics of Income Division are the editors of the *Bulletin*. Wendy Alvey, Clementine Brittain, Bettye Jamerson, Ruth Schwartz, Lisa Smith, and also Bob Wilson, as a private contractor, made major contributions in the production of this issue. Views expressed in the articles are those of the authors and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

## Individual Income Tax Returns, Preliminary Data, 1994

By Therese M. Cruciano

For 1994, taxpayers filed ll6.1 million individual income tax returns, an increase of 1.5 million over 1993. Adjusted gross income (AGI) increased 5.0 percent to \$3.9 trillion, more than twice the growth rate for 1993. "Taxable income" rose 5.9 percent to nearly \$2.6 trillion, while total income tax increased 6.2 percent to over \$532.3 billion. Salaries and wages, the largest component of AGI, rose \$141.0 billion, or 4.9 percent, for 1994. Other income items that showed substantial changes included taxable social security benefits, which increased 57.0 percent; taxable distributions from Individual Retirement Arrangements, which increased 22.0 percent; partnership and S Corporation net income (less loss), which increased 19.3 percent; and unemployment compensation, which decreased 27.1 percent. In large part due to a change in law, the total earned income credit increased 36.2 percent, to \$21.2 billion, and was claimed on over 19 million returns.

#### **S Corporation Returns, 1993**

By Amy M. Gill and Susan M. Wittman For 1993, the number of returns filed by S Corporations (qualifying corporations that elected to be taxed through their shareholders) rose 6.5 percent to 1.9 million. This was almost half of all corporation income tax returns. Their total net income (less deficit) amounted to \$66.2 billion, about 13.3 percent of the total for all corporations. Net income (less deficit) from a trade or business increased by 17.2 percent, due mainly to increases attributable to companies classified in services or in wholesale and retail trade. Real estate rental net income nearly tripled for 1993, increasing from \$0.4 billion for 1992 to \$1.2 billion. A total of 1.5 million of the 1.9 million S Corporations filed distribution schedules that indicated they had either one or two shareholders. The maximum number of shareholders these corporations could have was 35.

# Exempt Organization Business Income Tax Returns, 1992

By Margaret Riley

For 1992, tax-exempt organizations filed 5 percent fewer Forms 990-T, Exempt Organization Business Income Tax Return, overall, dropping from 32,690 for 1991 to 31,122 for 1992. Organizations with gross "unrelated business income," or UBI, of \$10,000 or less were largely responsible for this drop, with 16 percent fewer returns filed.

However, larger organizations, those with gross UBI over \$10,000, filed 5 percent more returns for 1992 and accounted for the increase in the four principal financial items for 1992: gross UBI, up 20 percent to \$4.1 billion; total deductions, up 28 percent to \$5.2 billion; and "unrelated business taxable income" and total income tax, each up 13 percent to \$485.9 million and \$132.4 million, respectively.

# Taxes and Organizational Choice: An Analysis of Trends, 1985-1992

By Tom Petska

In an analysis of trends in business activity based on statistics compiled from tax and information returns, this article shows some dramatic changes since the mid-1980's, particularly between businesses electing to be taxed at the individual income tax rates versus those taxed at the regular corporation income tax rates. This shift was initially observed in the statistics for 1987, the first year under the Tax Reform Act of 1986 (TRA 86). This shift to S Corporations, which is more apparent in the number of businesses than in economic activity they reported, is consistent with a response by smaller-size corporations to the marginal tax rate reductions in TRA 86. Also, the fact that this change primarily affected smaller corporations is consistent with the restrictions affecting the size of S Corporations.

#### Some Observations and Insights

Surely, 1996 will be remembered as a lean year for the Federal sector. What with more and more budget constraints, furloughs, and continuing resolutions, many Federal agencies face increasingly

difficult decisions on how to stretch their appropriations while still maintaining quality service for their customers. The Statistics of Income Division has been no exception....

One area that has come under close scrutiny, as we try to absorb budget cuts while continuing to produce the vast array of data that you have become accustomed to receiving, is our publications costs. SOI was notified of a dramatic cut in funds available for publications. In order to absorb the cut and still release our regular reports, several options have been explored. In fact, if you are a regular user of SOI data, you may have noticed some of the changes already. If not, here are some things we plan

to do in the future, to reduce our printing and distribution costs:

- Discontinue general announcements.-- This action was introduced last fall. Since then, instead of sending separate data releases out to the 12,000 or so names on our information mailing list to announce the availability of new data files or publications, we are looking at different ways to get this information to you. Any new reports or publications will be announced in the quarterly SOI Bulletin -- look for mention of them in this section of the Bulletin and for ad pages at the back of each SOI publication. Information will also be put on the SOI electronic bulletin board and on the SOI homepage on the World Wide Web (WWW).
- Reduce distribution.-- After considerable research, it was decided that we had been ordering more books than we needed. Our in-house supply was greater than necessary, and some of our customers were receiving more copies than they actually used. We were able to reduce our distribution in about half. This will help in cutting printing costs.
- Reduce the number of pages.-- Since the greatest cost of printing is the set-up cost per page, we determined that leaner books would be more cost effective. In looking for places to cut, we are considering more "data releases" (i.e., one- or two-page articles, which introduce a set of basic tables), in place of some featured articles; elimination of some duplication from issue to issue; and more selectivity in articles for inclusion.

For example, Historical Table 2.-- Individual Income and Tax Data by State and Size of Adjusted Gross Income (in the colored section of pages toward the back of the Bulletin) came to our attention. Table 2 runs 53 pages (including the U.S. total and a page for each state, the District of Columbia, and other areas) and has been included in each issue of the Bulletin, although it is only updated once a year. Therefore, beginning with this issue, the table will only be published once a year -- see pages 106-158 of this volume for the 1994 data for Table 2.

■ Explore electronic dissemination.-- Finally, we have resolved to explore our options for making better use of electronic data dissemination. The SOI electronic bulletin board has been up and running

for about 4 years, and it has proven quite successful. Now, we are only beginning to venture out onto the Internet. We are curious to see what our presence on the World Wide Web brings in, in terms of inquiries, new customers, and new demands.

We will also be evaluating how that will impact the sales of our products. To begin with, we expect to take a conservative approach, limiting what is available on the WWW and looking at the kinds of feedback and interest it generates. We are also considering other forms of electronic data dissemination -- maybe even providing data on CD ROM -- and ways to offer electronic subscriptions for those who are interested in more than just casual browsing through our tables of income and tax data.

We hope that these cutbacks will not adversely affect the data you use. We will certainly keep you informed of these developments as they occur and welcome feedback from you, to let us know how these changes impact your data needs. Your comments can be sent to us at the following address:

Director Statistics of Income Division CP:R:S P.O. Box 2608 Washington, DC 20013-2608.

#### **Behind the Scenes**

SOI is pleased to announce the release of its two latest reports:

1993 Corporation Source Book and Statistics of Income -1993, Individual Income Tax
Returns. Both the Source

**Book**, which provides detailed industry data by asset size based on corporation income tax returns, and the *Individual* SOI report, which contains the most complete individual income tax data for the tax year, are long-time publications of Statistics of Income.

#### **Source Book**

The SOI corporate data are the only publicly-available source of financial information on *all* corporations; other sources are generally limited to information for large or publicly-held corporations or for businesses in certain regulated industries. The *Source Book* is an extremely rich source of data, including complete income statement, balance sheet, tax computation, and other selected items

by major and minor industrial groups and by size of total assets for all returns and separately for returns with net income. As such, this annual series of SOI corporate data has become an ideal source for use in estimating corporate profits for the national accounts. (The latest *Bulletin* article on corporation income tax returns appeared in the Summer 1995 issue -- "Corporation Income Tax Returns, 1992," by Jonathan Shook and Janice Washington.)

The Source Book is based on a stratified probability sample of corporation income tax returns, which were selected after revenue processing, but before audit examination. The 1993 book represents returns with accounting periods ending between July 1993 and June 1994 -- so that the calendar year accounting period is centered at the middle of the span of months.—The report has been divided into four main sections -- returns with and without net income, i.e., all returns; returns with net income; S Corporation returns with and without net income; and S Corporation returns with net income. (For more information on S Corporations -- filed on Form 1120S -- see Amy M. Gill and Susan M. Wittman, "S Corporation Returns, 1993," in this issue of the SOI Bulletin.)

This represents the second year that the *Source Book* has been produced entirely in-house, thus resulting in more timely publication than in the past. The 511-page report can be purchased in its entirety or by page. Magnetic tape or diskette versions containing tabular statistics for 1993 are also available for sale. For information, contact the Statistical Information Services staff at (202) 874-0410.

#### **Individual Income Tax Returns**

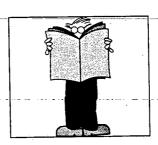

The *Individual* complete report is perhaps the most well known of our annual reports. First published in 1918, providing information on individuals for Tax Years 1913-1916, it now contains Tax Year 1993 data on sources of income, adjusted gross income, exemptions, deductions, taxable income, income tax, modified income tax, tax credits, self-employment tax, and tax payments, by tax status, size of adjusted gross income, marital status, and type of tax computation.

The latest *Individual* SOI report is based on a stratified probability sample of individual income tax returns, selected before audit, which represents a population of nearly 115 million Forms 1040, 1040A, 1040EZ, and 1040PC -- including electronic returns -- for Tax Year 1993. Along with additional underlying data on the file from these returns, they constitute the most comprehensive and complete data set available about the individual income tax system.

Preliminary data for 1994 appear in this issue of the SOI Bulletin -- see Therese M. Cruciano, "Individual Income Tax Returns, Preliminary Data, 1994." Preliminary statistics are comprised of data for the full year, based on an early cut-off (in September) of the probability sample, and are adjusted to represent all returns filed for Tax Year 1994. Because returns filed during the last 3 months of the year are not included in the preliminary estimates, however, some variables differ from final estimates that will appear in the complete report.

The current 209-page report should soon be available for sale through the Government Printing Office -- call (202) 512-1800. If you determine that this (or any other) SOI report is out of print, contact SOI's Statistical Information-Services --- at (202) 874-0410 --- for assistance.

#### **Your Call**

#### **Good Press**

SOI has gotten some nice press lately. A staffer using *TurboTax for Windows* noted that the *SOI Bulletin* was cited -- under "National Averages" -- as a source for "data collected from returns that were filed during previous years."

In a Washington Post article (March 17, 1996) entitled "More Money Migrating to Outer Areas: Relocating Residents Bring Their Higher Incomes, Too," D'Vera Cohn and William Casey used "new statistics from the Internal Revenue Service" to look at migration trends in the Washington metropolitan area. The authors point out that, with SOI county-to-county and state-to-state migration data, "what the IRS numbers add to the picture is a detailed look at how incomes move along with people. They show, for example, that people moving into communities that hug the Capital Beltway or lie inside it have lower median incomes than those moving out."

#### **World Wide Web**

By the time you read this, SOI should have its homepage up and running on the Internet's World Wide Web. SOI is listed under *Tax Stats* at the IRS Web site. IRS also has tax forms to download, instructions for completing tax forms and schedules, replies to general tax inquiries, and other general information about the Internal Revenue Service.

If you click on Tax Stats, you will find the following:

- Individuals
- Corporations
- Partnerships
- Exempt Organizations
- Estates/Wealth
- International Income and Taxes
- Sole Proprietorships
- Excise Taxes
- Other SOI Information
- About SOI
- Other IRS Information.

Look us up and browse through our new homepage; let us know what you think -- to access us on the WWW, our address is: http://www.irs.ustreas.gov/prod/tax\_stats/index.html.

#### **Upcoming Features**

The following are some of the articles planned for inclusion in upcoming issues of the SOI Bulletin:

- Corporation Income Tax Returns, 1993;
- Individual Income Tax Rates and Tax Shares, 1993;
- Sole Proprietors Filing Schedules C or C-EZ, Tax Year 1992.

Future "data releases" include:

- Tax-exempt Organizations, 1992; and
- Foreign Recipients of U.S. Income, 1993.

by Therese M. Cruciano

or Tax Year 1994, taxpayers filed 116.1 million U.S. individual income tax returns, an increase of 1.5 million returns, or 1.3 percent, from the number filed for 1993. Between 1993 and 1994, adjusted gross income less deficit (AGI) increased 5.0 percent to over \$3.9 trillion, more than twice the growth rate that occurred between 1992 and 1993. Taxable income rose 5.9 percent to nearly \$2.6 trillion, while total income tax increased 6.2 percent to over \$532.3 billion. The average tax rate for 1994 rose slightly to 13.6 percent of AGI, compared to 13.5 percent for 1993. However, except for taxpayers in two of the four highest income size classes in the statistics, the average tax rate for 1994 either declined or remained the same.

Between 1993 and 1994, the consumer price index (CPI-U) grew at an annual rate of 2.6 percent [1]. In contrast to 1993, the growth of both aggregate AGI and aggregate salaries and wages was greater than the rate of inflation. In addition to the 4.9 percent growth in salaries and wages. other-income items-showed-substantial-increases, therebycontributing to the growth of AGI. Notably, taxable distributions from Individual Retirement Arrangements and partnership and S Corporation net income (less loss) increased, 22.0 percent and 19.3 percent, respectively. Unemployment compensation continued to decline, as did the national unemployment rate. For 1994, the amount of unemployment compensation in AGI decreased 27.1 percent. In large part due to changes in law, the total earned income credit increased 36.2 percent, and taxable social security benefits increased 57.0 percent.

The comparisons of data for Tax Years 1993 and 1994 in this article are based on the preliminary estimates for both years [2]. A few income and tax items tend to be understated in preliminary estimates; therefore, comparisons based on preliminary estimates for one year and final estimates from previous years could be misleading. Comparisons based entirely on preliminary estimates both reduce the likelihood of misinterpretation of the data and afford a more accurate representation of year-to-year change. Final statistics for Tax Year 1993 are available in the historical tables at the end of this issue of the *Bulletin*.

# Adjusted Gross Income, Taxable Income, and Total Income Tax

AGI grew at a lower annual rate than taxable income for 1994--5.0 percent versus 5.9 percent (Figure A). How-

Therese M. Cruciano is an economist with the Individual Returns Analysis Section. This article was prepared under the direction of Jeff Hartzok, Chief. ever, growth rates for both AGI and taxable income were significantly higher than the corresponding rates for 1993 of 2.3 percent and 2.2 percent, respectively [3]. Total income tax increased by 6.2 percent, 0.9 percentage points higher than for 1993. The alternative minimum tax (AMT) rose 5.5 percent for 1994.

Average AGI reported on 1994 individual income tax returns was \$33,658, representing a growth of \$1,169, or

Income tax increased 6.2 percent to \$532.3 billion; the "earned income credit" increased 36.2 percent to \$21.2 billion, due in large part to a change in law.

3.6 percent, over the amount for 1993; in contrast, average AGI for 1993 grew \$494 to \$32,489, or a 1.5 percent increase from 1992. Average taxable income for 1994 equaled \$27,897, up \$936 (or 3.5 percent) from the 1993 amount of \$26,961, (which,

in turn, grew \$594, or 2.3 percent, over the amount for 1992). In addition, average total income tax for 1994 grew \$269 (or 4.6 percent) to \$6,065 per taxable return, in contrast to the \$319 increase (or 5.8 percent) to \$5,796 per taxable return for 1993 [4].

The average tax rate for 1994 (i.e., total income tax divided by AGI reported on all returns, taxable and nontaxable) was 13.6 percent, only 0.1 percentage point more than for 1993 (Figure B). In the statistics, all income size classes except two had average tax rates that were the same as, or 0.1 percentage point lower than, for 1993. Of the two income size classes showing increases, the average tax rate for the "\$100,000 under \$200,000" class rose 0.1 percentage point, while the average tax rate for the "\$500,000 under \$1,000,000" class increased 0.2 percentage points. The constant or lower average tax rates for 1994 were mainly the result of inflation indexing of the size of the standard deduction, the size of the deduction for personal exemptions, and the width of the tax rate brackets.

#### **Selected Sources of Income**

The largest component of AGI, salaries and wages, rose \$141.0 billion, or 4.9 percent, for 1994 (Figure C). Business or profession net income (less loss) increased 4.7 percent. Both salaries and wages and business or profession net income (less loss) grew by more than the 2.6 percent rate of inflation for 1994. However, the growth rates of these two items were notably less than the 6.2 percent growth rate for the Gross Domestic Product [5].

Taxable income from pensions and annuities, the second largest component of AGI, increased 6.5 percent,

<sup>&</sup>lt;sup>1</sup>Includes returns with adjusted gross deficit

to \$208.2 billion. The largest percentage increase of any income item was for taxable social security benefits which increased 57.0 percent to \$39.4 billion. Much of this increase can be attributed to the change in law which required up to 85 percent of social security benefits to be included in taxable income for 1994. This percentage represents an increase from the maximum of 50 percent

for 1993 and prior years. (See the Definitions and Changes in Law section of this article for an explanation of taxable social security benefits). Unemployment compensation declined 27.1 percent to \$20.2 billion, the lowest level since 1990, reflecting the comparatively low unemployment rate (6.1 percent) for 1994 [6]. Other income items with large percentage increases were taxable Indi-

n.a. - Not available

vidual Retirement Arrangement (IRA) distributions which increased 22.0 percent to \$33.1 billion, and partnership and S Corporation net income (less loss) which increased 19.3 percent to \$112.5 billion.

Interest rates remained relatively low during 1994, and taxable interest declined 5.1 percent to \$120.6 billion. This decline made Tax Year 1994 the fourth consecutive year for which taxable interest decreased.

Excluded from Figure C are "statutory adjustments," which are subtracted in the computation of AGI (see the Statutory Adjustments section of this article).

"Total positive income" (TPI) differs from AGI in that it includes only the positive income line items from individual tax returns [7]. For 1994, TPI grew 4.9 percent, to \$4.1 trillion (Figure D). TPI is particularly useful when examining percentage changes in income items which can have either positive or negative results, i.e., a gain or loss, such as estate and trust income, rent and royalty income, and farm income, that are relatively similar in size. This is because the netting effect tends to camouflage the separate gains and losses which can be quite substantial [8]. Major increases included estate and

trust net income which increased 16.2 percent to \$5.2 billion, and partnership and S Corporation net income which rose 14.4 percent to \$141.8 billion.

#### Losses

In contrast to total positive income, total negative income includes only the negative income line items from individual tax returns. Total negative income, i.e., net loss, included in AGI increased for 1994 by 4.1 percent to \$144.0 billion (Figure E). "Other net loss," representing the total amount (including positive amounts) reported on the "all other" residual income line of Form 1040 (excepting the foreignearned income exclusion), was responsible for 25.0 percent of the total and showed a 4.5 percent increase. The "net operating loss carryforward" accounted for 94.0 percent or \$33.9 billion of "other net loss." The second largest component of total net loss, partnership and S Corporation net loss, decreased 1.4 percent to just over \$29.2 billion. The largest dollar amount change occurred in farm net loss, which increased \$2.6 billion to \$15.4 billion. The largest percentage change was for net capital loss, which increased 29.4 percent to \$10.3 billion for 1994.

#### **Statutory Adjustments**

Statutory adjustments to total income increased 5.9 percent, from \$35.9 billion for 1993 to \$38.0 billion for

1994 (Figure F). The largest of all statutory adjustments was the deduction for one-half of self-employment tax, representing 33.4 percent of the total. This deduction

<sup>1</sup> Includes capital gain distributions not reported on Schedule D.

<sup>2</sup> Includes farm rental net income.

<sup>&</sup>lt;sup>3</sup> "Other net income" represents only data reported on the residual line on Form 1040.

<sup>1</sup> includes farm rental net loss.

<sup>&</sup>lt;sup>2</sup> Includes only the portion of capital losses deducted during the calculation of adjusted gross income.

<sup>&</sup>lt;sup>3</sup> Represents only data reported on the residual line of Form 1040, except the foreign-earned income exclusion.

NOTE: Detail may not add to totals because of rounding.

Prior to 1994 moving expenses were an itemized deduction reported on Schedule A Excludes amended returns on which deduction was claimed retroactively for 1994.

Percentage not computed.

increased 9.1 percent, mostly because of an increase in the amount of self-employment income subject to the Medicare portion of self-employment tax. The ceiling on the amount of self-employment income subject to the Medicare tax was eliminated for 1994. The self-employed health insurance deduction expired in 1993 and was not restored until April 1995. Therefore, taxpayers who wished to take the deduction but had already filed their 1994 returns, had to file an amended return. However, amended returns are not reflected in these statistics. (See the Definitions and Changes in Law section of this article for further explanation of the changes to the deductions for self-employed health insurance and self-employment tax.) Deductible payments to Individual Retirement Arrangements, despite a continued downward trend which began with 1986, accounted for 22.2 percent of all statutory adjustments.

The deduction for moving expenses was available for all taxpayers as a statutory adjustment for 1994, rather than as an itemized deduction. Comparing the 1993 deduction and the 1994 adjustment (and 1994 deduction for prior-year moves), the number of taxpayers claiming moving expenses increased 14.3 percent, while the amount of the expenses declined 50.7 percent. This decrease in the amount of moving expenses claimed may be attributed to the changes in law which eliminated the deductibility of several expenses previously allowed (see the Definitions and Changes in Law section of this article).

#### **Deductions**

The aggregate amount of all standard deductions claimed on 1994 individual income tax returns, i.e., the basic standard deduction plus the additional standard deduction for age or blindness, increased 4.2 percent to \$399.2 billion (Figure G). Total deductions, the sum of the standard deductions and total itemized deductions (after limitation), equaled \$881.8 billion, an increase of only 2.1 percent. Since taxable income is the result of AGI less deductions and exemptions, this relatively small increase in total deductions resulted in a larger increase in taxable income. (See the Definitions and Changes in Law section of this article for a definition of the itemized deduction limitation.)

The number of returns claiming a standard deduction increased 1.6 percent for 1994, accounting for 70.9 percent of all returns filed and 45.3 percent of the total deductions amount. The 1994 average standard deduction equaled \$4,851, up \$121 from the average for 1993. The increase was largely due to inflation indexing of the standard deduction amounts.

Itemized deductions were claimed on 28.3 percent of all returns filed and represented 54.7 percent of the total deductions amount. The average total for itemized deductions (after limitation) equaled \$14,668, down \$25 from the average for 1993. (The remaining 0.8 percent of the returns did not claim either standard or itemized deductions because there was no AGI on these returns.)

Total itemized deductions (before limitation) increased 0.6 percent for 1994. Interest paid constituted the largest portion (38.7 percent) of the total, with home mortgage interest accounting for 95.3 percent of total interest paid. The remaining portion of interest paid was divided between investment interest and deductible points paid on a mortgage. The home mortgage interest deduction decreased 1.6 percent from the 1993 amount. The taxes paid

#### Figure G

Itemized deductions in excess of limitation	3,289	12,408	3,355	12,866	3.7
Total itemized deductions after limitation	32,694	480,355	32,903	482,620	0.5
Total standard deduction	81,014	383,231	82,290	399,215	4.2
Total deductions (after itemized deduction limitation)	113,708	863,586	115,192	881,835	2.1

' Returns with no adjusted gross income are not included in the deduction counts. For this reason, the sum of the number of returns with total itemized deductions and

the number of returns with total standard deduction is less than the total number of returns for all filers.

<sup>2</sup> Includes investment interest and deductible mortgage "points" not shown separately.

3 Amount shown is for moving expenses incurred in years prior to 1994, but reported on 1994 returns.

Percentage not computed.

deduction increased 3.3 percent, to comprise 35.0 percent of total itemized deductions (before limitation), while the deduction for charitable contributions increased only 2.6 percent, less than half the rate of the increases seen in recent years. The change in law requiring written acknowledgment of contributions over \$250 may account for the "modest" increase for 1994. The moving expenses deduction is for expenses incurred in prior years. All current-year moving expenses were deducted from gross income as a statutory adjustment.

The AGI threshold for the limitation of itemized deductions increased to \$111,800 (\$55,900 if married filing separately) for 1994. Due to this limitation, higher-income taxpayers were unable to deduct \$12.9 billion in itemized deductions, a 3.7 percent increase from the 1993 amount.

#### **Tax Credits**

Total tax credits rose 6.4 percent, or \$0.5 billion, for 1994 to \$8.4 billion. The change was primarily a result of the large increase in the earned income credit (used to offset income tax before credits) (Figure H). The general business credit and the credit for prior-year minimum tax also increased considerably for 1994. However, a large portion of the increases was offset by decreases in three other credits (the child care credit, the credit for the elderly or disabled, and the foreign tax credit). Despite a 19.5 percent increase in the number of returns claiming

the foreign tax credit, the total amount of this credit decreased 6.3 percent.

The portion of the earned income credit (EIC) used to offset income tax before credits increased 21.4 percent for 1994, nearly twice the increase for 1993. The largest part of the EIC was the refundable portion, which was treated as a refund and paid directly to taxpayers who had no tax against which to apply the credit, or whose EIC exceeded income tax (and other taxes, such as the self-employment tax). The refundable portion of the EIC totaled \$16.7 billion for 1994, an increase of 38.3 percent from 1993.

The EIC changed significantly for 1994. For the first time, taxpayers without eligible children could qualify for the credit, provided they were between the ages of 25 and 64, had earned income, and their earned income and AGI were each less than \$9,000. In addition, the structure of the credit changed with the elimination of both the health insurance credit and the extra credit for a child born during the year. Only the basic credit part of the computation from 1993 remained. Moreover, for 1994 the income eligibility level was increased for taxpayers with two or more qualifying children. This change allowed taxpayers with two or more qualifying children to have a higher income than taxpayers with only one qualifying child and still be eligible for the EIC. Previously, there was only one income eligibility level for all taxpayers (see the Definitions and Changes in Law section of this article for details).

#### Figure H

#### Selected Tax Credits, Tax Years 1993 and 1994

[Number of returns is in thousands--money amounts are in millions of dollars]

	1993 (pre	liminary)	1994 (pre	Percentage	
ttem .	Number of returns	Amount	Number of returns	Amount	increase in amount
	(1)	(2)	(3)	(4)	(5)

<sup>1</sup> Includes credits not shown separately.

The total earned income credit increased 36.2 percent to \$21.2 billion for 1994 (Figure I). When returns without qualifying children were excluded (making the data comparable to 1993), the amount of EIC reported rose 31.8 percent, yet the number of returns decreased 1.3 percent. This decline may reflect the Internal Revenue Service (IRS) program which verified social security numbers of all dependents claimed on tax returns in order to reduce fraudulent EIC claims. For taxpayers with one qualifying child, the number of returns claiming the EIC decreased 3.9 percent for 1994 while the amount of the credit increased 20.8 percent. For taxpayers with two or more qualifying children claiming the EIC, the number of

returns increased 1.6 percent, and the amount of the credit dramatically rose 45.5 percent. The increases for these returns may be related to the increased income eligibility level for taxpayers with two or more qualifying children, allowing more taxpayers to take advantage of the EIC. Similar changes can be seen in the statistics for the refundable portion of the credit.

Figure J shows a history of the EIC from 1985 through 1994. This program expanded greatly over this time period, with major increases (due to previous tax law changes) in 1987 and 1991. The tax law change for 1994 once again greatly increased the number of participants in this program and the amount of credit and refunds they received.

#### Figure I

#### Earned Income Tax Credit, Tax Years 1993 and 1994

<sup>&</sup>lt;sup>2</sup> Represents portion of earned income credit used to offset income tax before credits. Additional earned income credit amounts were used to offset other taxes (\$1.2 billion for 1993 compared to \$1.7 billion for 1994), and some amounts were either refundable or paid directly to the taxpayer (\$12.1 billion for 1993 compared to \$16.7 billion for 1994).

Figure J

#### Earned Income Credit (EIC), Tax Years 1985-1994

NOTE: Data for Tax Years 1985 and 1989 are final; data for all other years are preliminary.

#### Summary

Adjusted gross income and total positive income grew at over twice the rate for 1994 as they had for 1993, exceeding the rate of inflation by more than 2 percentage points. While income tax increased for this same period, for most income size classes used for the statistics, the average tax rates were the same as or lower than the rates for 1993. The two income size classes that did have a higher average tax rate for 1994 experienced only slight increases (0.1 or 0.2 percentage points) in their average tax rates. Total deductions increased only 2.1 percent, and taxable income rose 5.9 percent.

There were changes in law which affected several income and tax items for 1994. The total earned income credit increased 36.2 percent. The amount of social security benefits in AGI rose 57.0 percent. Moving expenses, while available to all taxpayers as a statutory adjustment, decreased as several expenses were no longer deductible. Other income items that showed substantial changes for 1994 include taxable distributions from IRA's

which increased 22.0 percent, partnership and S Corporation net income (less loss) which increased 19.3 percent, and unemployment compensation which declined 27.1 percent.

#### **Definitions and Changes in Law**

In general, the definitions used in this article are the same as those in *Statistics of Income—1993*, *Individual Income Tax Returns*. The following is a partial list of tax law and IRS administrative changes that had a major bearing on the 1994 preliminary data presented in this article.

Charitable Contributions Deduction. — Beginning in 1994, written acknowledgment from the qualified recipient organization was required for all charitable contributions of \$250 or more.

Earned Income Credit. — The earned income credit had several changes for 1994. The law determining who could claim the credit was modified to include certain taxpayers without qualifying children. Taxpayers between the ages of 25 and 64 who had earned income, had less than \$9,000

in both earned income and adjusted gross income, and did not have a qualifying child could claim the earned income credit. These taxpayers filled out the EIC Worksheet (instead of Schedule EIC) and claimed the credit on the Form 1040, Form 1040A, Form 1040EZ, or Form 1040PC return. For working taxpayers with qualifying children and claiming the earned income credit, both earned income and adjusted gross income had to be less than \$23,755 for one qualifying child or less than \$25,296 for two or more qualifying children. These taxpayers were required to attach the Schedule EIC to their Form 1040, Form 1040A, or Form 1040PC return.

The computation of the earned income credit was changed for 1994. The health insurance credit and the extra credit for a child born during the year were eliminated. For 1993, the health insurance credit could have been as much as \$465, and the extra credit could have been as much as \$388. In addition, for 1993 there was only a single earned income and adjusted gross income eligibility level of \$22,370 for all taxpayers, and the maximum basic credit amounts were \$1,434 for one qualifying child, and \$1,511 for two or more qualifying children. The credit for 1994 could have been as much as \$306 for taxpayers without children, \$2,038 for taxpayers with one qualifying child, and \$2,528 for taxpayers with two or more qualifying children.

Exemption Amount. — Indexing for inflation allowed a taxpayer to claim a \$2,450 deduction for each exemption to which he or she was entitled for 1994, a \$100 increase over the amount allowed for 1993. The threshold for the limitation of exemption amounts was also indexed for inflation, from \$108,450 to \$111,800 for single filers; \$162,700 to \$167,700 for married persons filing jointly and surviving spouses; \$135,600 to \$139,750 for heads of household; and \$81,350 to \$83,850 for married persons filing separately. After adjustment for inflation, the phaseout of the deduction for exemptions was completed at AGI levels above \$234,300 for single filers; \$290,200 for married persons filing jointly and surviving spouses; \$262,250 for heads of household; and \$145,100 for married persons filing separately. Above these levels, no deduction for exemptions was allowed.

Itemized Deductions. — If a taxpayer's AGI was greater than \$111,800 (\$55,900 if married filing separately), some types of his or her itemized deductions may have been limited; this threshold was increased from \$108,450 (\$54,225) for 1993, as a result of indexing for inflation. The limitation did not apply to deductions for medical and dental expenses, investment interest expenses, casualty or theft losses, and gambling losses; all other deductions were subject to the limitation. To arrive at allowable

itemized deductions, total itemized deductions were reduced by the smaller of: (a) 80 percent of the deductions that were subject to the limitation, or (b) 3 percent of AGI in excess of the limitation threshold.

Moving Expenses. — Beginning with 1994, currentyear moving expenses were no longer an itemized deduction on Schedule A. Instead, taxpayers deducted currentyear qualified moving expenses in the calculation of adjusted gross income as a statutory adjustment. This change allowed taxpayers who used the standard deduction to deduct their moving expenses. In order to deduct allowable moving expenses, the taxpayer's new job location had to be at least 50 miles farther from their former home than their old job location. Prior to 1994, the distance requirement was 35 miles. The following expenses were no longer deductible: meals while moving from the old residence to the new residence; travel expenses for pre-move house hunting trips; expenses while occupying temporary quarters in the area of the new job; and qualified residence sale, purchase, and lease expenses.

Self-employed Health Insurance Deduction. —The self-employed health insurance deduction expired on December 31, 1993. A bill was signed on April 11, 1995 restoring the provision retroactively to January 1, 1994. Taxpayers who had already filed their 1994 returns had to file an amended return if they wished to take advantage of the deduction. Amended returns, however, are not reflected in these statistics.

Self-employment Tax. — The ceilings on taxable "self-employment income" were changed for 1994. The maximum amount of net earnings subject to the social security part of self-employment tax increased to \$60,600. In contrast, all net earnings (without limit) greater than \$433 (\$108 for church employees) were subject to the Medicare tax portion. The limits for 1993 were \$57,600 for self-employment tax and \$135,000 for Medicare tax. (Self-employment taxes and Medicare taxes are reflected in the statistics for "total tax liability.") A deduction for one-half of self-employment tax was taken as an adjustment to income.

Social Security Benefits. — Beginning with 1994, certain taxpayers who received social security or equivalent "tier 1 railroad retirement benefits" had to include up to 85 percent of benefits received in their taxable income. By using a worksheet, taxpayers who had income in addition to any benefits received, calculated their "modified income" and compared it to both a base amount and an adjusted base amount [9]. If the "modified income" was between \$32,000 and \$44,000 for married taxpayers filing jointly, or \$25,000 and \$34,000 for all other taxpayers (except married taxpayers filing separately who lived

with their spouse anytime during the year and had a base amount of zero), 50 percent of the income over the base, but not more than 50 percent of the benefits received, was taxable. However, if the "modified income" exceeded the adjusted base amount of \$44,000 for married taxpayers filing jointly, or \$34,000 for all other taxpayers (except married taxpayers filing separately who lived with their spouse anytime during the year and had an adjusted base amount of zero), \$4,500 (\$6,000, if married filing jointly) plus 85 percent of the income above the \$34,000 or \$44,000 threshold would be taxable, with the taxable amount limited to 85 percent of social security benefits. If the "modified income" amount was less than the base amount, none of the benefits received were taxable. Prior to 1994, a maximum of 50 percent of social security or tier 1 railroad retirement benefits was included in adjusted gross income.

Standard Deduction. — The basic standard deduction and additional standard deduction for age or blindness increased for 1994 as a result of inflation indexing. For single filers, the basic standard deduction rose from \$3,700 to \$3,800; for married persons filing jointly or surviving spouses, from \$6,200 to \$6,350; for married persons filing separately, from \$3,100 to \$3,175; and for heads of household, from \$5,450 to \$5,600. The additional standard deduction for taxpayers, age 65 or older or the blind rose from \$900 to \$950 for single filers and heads of households, and from \$700 to \$750 for married persons filing jointly, surviving spouses, and married persons filing separately.

Tax Brackets. — To counterbalance the effects of inflation, the boundaries for the 15 percent and 28 percent tax brackets were widened. The 15 percent bracket applied to taxable income equal to or below \$22,750 for single filers; \$38,000 for joint filers or surviving spouses; \$19,000 for married persons filing separately; and \$30,500 for heads of household. The 28 percent tax bracket applied to taxable income in excess of the 15 percent bracket ceiling and equal to or below \$55,100 for single filers; \$91,850 for joint filers or surviving spouses; \$45,925 for married persons filing separately; and \$78,700 for heads of household. The 31 percent tax bracket applied to taxable income in excess of the 28 percent bracket ceiling and equal to or below \$115,000 for single filers; \$140,000 for joint filers or surviving spouses; \$70,000 for married persons filing separately; and \$127,500 for heads of households. The 36 percent tax bracket applied to taxable income in excess of the 31 percent bracket ceiling and equal to or below \$250,000 for single filers, joint filers or surviving spouses, and heads of

households, and \$125,000 for married persons filing separately. The 39.6 percent tax rate applied to taxable income in excess of the upper boundary for the 36 percent tax bracket.

#### **Data Sources and Limitations**

These preliminary statistics are based on a sample of individual income tax returns (Forms 1040, 1040A, 1040EZ, and 1040PC, including electronically-filed returns) filed during Calendar Year 1995. Returns in the sample were stratified based on: (a) the larger of positive income or negative income; (b) the size of business and farm receipts; (c) the presence or absence of specific forms or schedules; and (d) the usefulness of returns for tax policy modeling purposes [10]. Returns were then selected at rates ranging from 0.02 percent to 100 percent. The preliminary 1994 data are based on a sample of 91,044 returns and an estimated final population of 116,976,544 returns. The corresponding sample and population for the preliminary 1993 data were 88,191 and 115,616,004 returns, respectively.

Since the data presented here are estimates based on a sample of returns filed, they are subject to sampling error. To properly use the statistical data provided, the magnitude of the potential sampling error must be known; coefficients of variation (CV's) are used to measure that magnitude. Estimated CV's for the number of returns and money amounts for selected income items are presented in Figure K. The reliability of estimates based on samples, and the use of coefficients of variation for evaluating the precision of estimates based on samples, are discussed in the appendix to this issue of the *Bulletin*.

While the preliminary estimates are intended to represent a full year of taxpayer reporting, they are actually based on returns processed for tax administration purposes, in the case of 1994 returns, between January and late September of 1995. In general, returns processed during the remainder of each year tend to have somewhat different characteristics compared to the returns processed earlier. These characteristics include disproportionately large amounts of investment income, passive losses, and alternative minimum tax, for example.

All comparisons between 1994 and 1993 are based on preliminary estimates for each year. A comparison of 1993 preliminary and final data is provided in Figure L. Items such as AGI, salaries and wages, and total income tax, which are reported on most returns, changed little. In contrast, other items, including partnership and S Corporation net loss, "other" income less loss, and the alternative minimum tax tend to be understated, to varying degrees, in all preliminary estimates.

#### **Notes and References**

[1] Economic Report of the President, 1995, p. 341. The consumer price index (CPI-U) represents annual averages of monthly figures and reflects buying patterns of all urban consumers (1982-84=100):

1994 CPI-U = 148.2 1993 CPI-U = 144.5; 1992 CPI-U = 140.3.

[2] "Preliminary estimates" differ from the "early tax estimates" published for 1994 in the Fall 1995 edition of the *Bulletin*. The preliminary estimates in this article represent estimated totals expected for the full tax year, based on returns processed by the Internal Revenue Service through September 1995. The early tax estimates represent data only for returns filed through April 28.

- [3] For more information on the growth rates of AGI and taxable income for 1993, see Cruciano, Therese M., "Individual Income Tax Returns, Preliminary Data, 1993," *Statistics of Income Bulletin*, Spring 1995, Volume 14, Number 4.
- [4] Average AGI is defined as the amount of AGI divided by the number of returns filed. Average taxable income is defined as the amount of taxable income divided by the number of returns with taxable income. Average total income tax is defined as the amount of total income tax divided by the number of taxable returns. Taxable returns are defined as returns with "total income tax" (the sum of income tax after credits and the alternative minimum tax) present.

Alternative minimum tax	1,751	2,053	302	17.2

- 1 Less than 0.05 percent.
- [6] Economic Report of the President, 1995, p. 320.
- [7] For purposes of this article, total positive income is a compilation of all income items on individual income tax returns (Forms 1040, 1040A, 1040EZ, 1040PC, and electronically-filed returns) for which a positive amount was reported by the taxpayer. The Form 1040 income tax return entry for Schedule E, Supplemental Income and Loss (From rental real estate, royalties, partnerships, S corporations, estates, trusts, REMICs, etc.), was separated into the following components: rent and royalty net income, partnership and S Corporation net income, and estate and trust net income. When any of these components were positive on a return, the corresponding income (rather than the netted total amount from Schedule E) was included in the statistics for total positive income. For example, if a return showed estate and trust net income of \$20,000 and rent and royalty net loss of \$12,000, total positive income would include the \$20,000 of estate and trust net income, rather than the \$8,000 netted total of both sources of supplemental income.
- [8] For example, farm net income decreased 10.3 percent, from \$9.7 billion to \$8.7 billion, while farm net loss

- rose 20.4 percent, from \$12.8 billion to \$15.4 billion. The net income (less loss), however, decreased 117.5 percent. The smaller percentage changes in the positive and negative portions led to a larger percentage change in the combined total because the respective portions of total income and total losses were similar in size.
- [9] In contrast to AGI, modified income (calculated on the social security worksheet) includes tax-exempt interest, excludable interest from U.S. savings bonds reported on Form 8815, one-half of total social security benefits, and the foreign-earned income exclusion, and excludes the foreign housing deduction.
- [10] Returns in the sample were stratified based on the presence or absence of one or more of the following forms or schedules: Form 2555, Foreign Earned Income; Form 1116, Foreign Tax Credit (Individual, Fiduciary, or Nonresident Alien Individual); Schedule C, Profit or Loss from Business (Sole Proprietorship); Schedule F, Profit or Loss From Farming; and Form 4835, Farm Rental Income and Expenses (Crop and Livestock Shares (Not Cash) Received by Landowner (or Sub-Lessor)).

<sup>\*</sup>Estimate should be used with caution because of the small number of sample returns on which it is based.

<sup>&</sup>lt;sup>1</sup>Not included in adjusted gross income.

<sup>&</sup>lt;sup>2</sup>Total income tax represents income tax after credits (including the earned income credit), plus alternative minimum tax

Total tax liability represents income tax after credits (including the earned income credit), plus alternative minimum tax, plus any other additional taxes, e.g., self-employment tax and penalty tax on Individual Retirement Arrangements (IRA's).

NOTE: Detail may not add to totals because of rounding.

Table 2.--Returns With Earned Income Credit by Size of Adjusted Gross Income

[All figures are estimates based on samples-money amounts are in thousands of dollars]

Size of adjusted	Number of	Adjusted gross	Earned	income	Total earned	ncome credit	Earned incom to offset in before	come tax
gross income	returns	income (less deficit)	Number of returns	Amount	Number of returns	Amount	Number of retums	Amount

<sup>1</sup> Less than \$500.

by Amy M. Gill and Susan M. Wittman

he number of S Corporation returns filed rose 6.5 percent for 1993 to 1.9 million. Following enactment of the Tax Reform Act of 1986 (TRA 86), the annual growth rate for S Corporation returns averaged 13.0 percent. Despite the increase in the number of S Corporations, the total number of corporations remained relatively constant because the increase in S Corporations was partially offset by an average annual decline of 3.2 percent in the number of taxable corporation returns.

TRA 86 made it advantageous for many closely-held corporations to elect to have their profits taxed through shareholders at the individual income tax rates, rather than at the corporate level at the generally higher corporation rates. As a result, the number of S Corporations grew from 24.1 percent of all corporation income tax returns for 1986, to 48.0 percent of the total for 1993. However, because S Corporations are generally smaller in size than taxable corporations, their share of total adjusted corporate net income (less deficit) grew only slightly from 1986 to 1993, from 8.9 percent to 13.3 percent. [1]

Total net income (less deficit) reported by S Corporations for 1993 amounted to \$66.2 billion, about 13.3 percent of the adjusted total for all corporations. Net income (less deficit) from a trade or business (in contrast to net income from rental activities and investments) was the major component of the total, \$54.1 billion. For 1993, net income (less deficit) from a trade or business increased by 17.2 percent, due mainly to increases attributable to companies classified in services, and in wholesale trade and retail trade. Real estate rental net income nearly tripled for 1993, increasing from \$0.4 billion for 1992 to \$1.2 billion for 1993.

#### **S Corporation Criteria**

Certain closely-held taxable corporations were first given special treatment in 1958. Subchapter S of the Internal Revenue Code -- from which these corporations take their name -- provides a set of restrictive criteria which a company must meet in order to qualify. S Corporations file Form 1120S, U.S. Tax Return for an S Corporation [2,3]. Although some of the details have changed over the years, S Corporations had to meet the following criteria for 1993:

- no more than 35 shareholders;
- only individuals as shareholders (with an exception for estates and trusts);

Amy M. Gill and Susan M. Wittman are economists with the Corporation Special Projects Section. This article was prepared under the direction of Alan Zempel, Chief.

- no nonresident alien shareholders; and
- only one class of stock.

Corporations that were ineligible to be treated as S Corporations were:

- a member of an affiliated group eligible for inclusion in a consolidated return;
- a financial institution (mostly banks) to which Internal Revenue Code section 585, concerning deductions for additions to reserves for losses of bad debts, applied;
- an insurance company subject to tax under Subchapter L of the Internal Revenue Code;
- a corporation which elected to take advantage of the U.S. possessions tax credit; or
- an Interest-Charge Domestic International Sales Corporation (IC-DISC), or a former DISC.

There are no restrictions on the size or types of assets an S Corporation can hold or on the amount of income which it can earn, although most are small corporations [4]. An S Corporation election terminates if any of the Code's eligibility rules are violated. An election is also terminated if a corporation's passive investment income exceeds specified limits.

There are many advantages to being a Subchapter S
Corporation. One advantage is the avoidance of double taxation of income. A taxable corporation's income is taxed first at the corporate level and again at the shareholder level if and when earnings are distributed.

For 1993, S Corporations comprised 48 percent of all corporation returns compared to 24 percent for 1986. Their net income (\$66.2 billion) was 13 percent of the total, compared to 9 percent for 1986.

Under Subchapter S, a corporation's income is taxed only once, at the shareholder level. Income from an S Corporation is taxed to the shareholder whether or not distributed (as in a partnership), rather than when received in the form of a dividend (as in the case of other corporations). At the same time, an S Corporation can retain many of the characteristics of corporations, such as limited liability, freely transferable corporate ownership, and an unlimited life span.

The number of S Corporations grew from 826,214 for 1986 to 1,901,505 for 1993. This growth was directly attributable to the provisions of TRA 86 which made the

maximum individual tax rate lower than the maximum corporate tax rate, and repealed the General Utilities
Doctrine [5,6]. Figure A shows the number of S Corporations, their assets, and business receipts for 1986 and 1993. The number of other types of corporations declined from 2.6 million returns for 1986 to 2.1 million for 1993.

Taxable corporations declined by almost 1.0 percent from 1992 to 1993. For 1993, of the 255.6 thousand corporations that elected S Corporation status for the first time, three-fourths were newly incorporated [7]. S Corporations comprised 24.1 percent of all corporation income tax returns for 1986, but by 1993 this had increased to 48.0 percent.

#### **S Corporation Income From a Trade or Business**

The number of S Corporation returns, as well as their total assets and total receipts (business receipts plus income from rental activities and investments), increased modestly from 1992 to 1993 (Figure B). However net income (less deficit) from a trade or business increased more dramatically, from \$46.2 billion-for-1992-to \$54.1 billion-for 1993. Though large, this increase was half the size of the 1991-1992 increase of \$17.1 billion. The 1993 increase resulted from a combination of an increase in positive net income (8.9 percent) and a decrease in deficit, (2.5 percent). The number of returns with positive net

income from a trade or business increased from 941.2 thousand for 1992 to 1.0 million for 1993 [7].

The largest increase in trade or business net income occurred in wholesale and retail trade, \$2.4 billion, from \$12.6 billion to \$14.9 billion (Figure B). Wholesale trade showed a \$1.2 billion increase, with miscellaneous wholesale trade having the largest increase, \$0.8 billion. Within retail trade, automotive dealers and service stations accounted for over three-fourths of the \$1.1 billion increase.

Services reported the second largest increase in trade or business net income. Net income jumped from \$10.6 billion for 1992 to \$12.6 billion for 1993. Business services reported the largest increase, from \$3.8 billion for 1992 to \$4.7 billion for 1993.

#### S Corporation Total Net Income

The taxable income of an S Corporation accrues to the shareholders, regardless of whether the income is actually distributed in the form of dividends. The entity's losses are allocated to the shareholders, who deduct them on their-income tax-returns, subject to certain limitations.—Besides "ordinary" taxable income or losses, other corporate transactions flow through separately; these include net long-term capital gains and losses, charitable contributions, tax-exempt interest, foreign tax credits, and business credits [8]. S Corporations for 1993-reported

\$66.2 billion of total net income (less deficit) (Table 1). While 53.4 percent of S Corporations had positive trade or business net income [7], 58.7 percent had positive total net income. As is shown in Table 2, positive total net income includes \$9.7 billion in portfolio income and \$3.4 billion in rental income. The largest percentage of total net income (less deficit) was for the manufacturing division (27.0 percent). This was followed closely by wholesale and retail trade (25.7 percent) and services (22.2 Percent) (Figure C).

Trade or business income accounted for 81.7 percent of the total net income (less deficit) for all S Corporations

for 1993. This percentage varied by industrial division, ranging from 90.3 percent for manufacturing to 42.8 percent for finance, insurance, and real estate. The lower percent for finance, insurance, and real estate resulted because portfolio income and rental income were not considered to be trade or business income. The largest income items for finance, insurance, and real estate (next to net income from a trade or business) were portfolio income from net long-term capital gain (less loss), \$1.8 billion, and interest, \$1.4 billion. Holding and other investment companies accounted for 84.8 percent of net long-term capital gain (less loss), \$1.5 billion. The real

estate industry group accounted for the largest amount of the interest income, \$0.9 billion.

#### **Taxation of S Corporations**

An S Corporation is mostly an income-reporting, not a tax paying, entity. There is, in general, no corporate-level income tax. Instead, income is taxed to the shareholders immediately, whether or not actually distributed. The S Corporation is also not subject to the corporate alternative minimum tax (AMT) on tax preferences. Tax preference items are allocated to shareholders for AMT purposes.

However, an S Corporation is subject to tax at the corporate level under certain circumstances. Some of these taxes are the built-in gains tax, the excess net passive income tax, and the investment credit recapture tax. Additional taxes, reported as adjustments to tax by S Corporations, are the "last-in, first-out" (LIFO) inventory recapture tax, and interest due under the "look-back method" for completed long-term contracts (Figure D) [9].

The total of all corporate level taxes reported by S Corporations for 1993 was \$82.6 million, down from more than \$88.6 million for 1992. The drop in adjustments to tax, from \$23.5 million to \$18.8 million, ac-

N/A -- Not applicable.

counted for most of this decrease. The income tax adjustment of \$2.1 million was included for 1993, but not for 1992.

#### **Shareholder Activity for 1993**

Table 4 presents the first data available from the Schedule K-1, the schedule used by S Corporations to report each shareholder's share of income, credits, and deductions. Schedules K-1 were included with 1,866,758 S Corporation returns out of the total estimated population of

1,901,505. Data are shown for 3.8 million Schedules K-1 out of the estimated 4.5 million S Corporation shareholders for 1993. There are two reasons for the discrepancy. First, no Schedules K-1 were located for approximately 34.7 thousand S Corporations. Second, about 19.8 thousand S Corporations reported more shareholders than the number of Schedules K-1 attached [7]. Schedules K-1 were missing either because the S Corporation did not include them when the return was filed, or because they could not be obtained for statistical processing. In a very few cases there were more Schedules K-1 filed than the number of shareholders reported on the Form 1120S. This resulted from shareholders transferring their ownership during the year. When this happened, the S Corporation included part-year Schedules K-1 for both shareholders. However, only the number of shareholders of record at the end of the year was reported on the Form 1120S itself.

The 3.8 million shareholders shown on Schedules K-1 accounted for \$54.0 billion of the \$54.1 billion in net income (less deficit) from a trade or business. They account for similarly large amounts of the total for other income items.

The overwhelming number of S Corporations had only one or two shareholders (Figure E). Although the Internal Revenue Code allows as many as 35 shareholders at one time, 1.5 million out of the 1.9 million S Corporations for

which Schedules K-1 were filed for 1993 reported either one or two shareholders. S Corporations with one or two shareholders comprised 81.3 percent of the total number of S corporations filing Schedules K-1. S Corporations with more than 10 shareholders comprised only 1.1 percent of the total number of S Corporations filing Schedules K-1.

Ordinary income from trade or business reported on Schedules K-1 was \$54.0 billion. Corporations with only one shareholder accounted for 26.7 percent of this amount. Ordinary income from trade or business was, usually, the largest income item that is carried to the shareholder's individual income tax return. S Corporation deficits can be used to offset income from any other source that a shareholder may report.

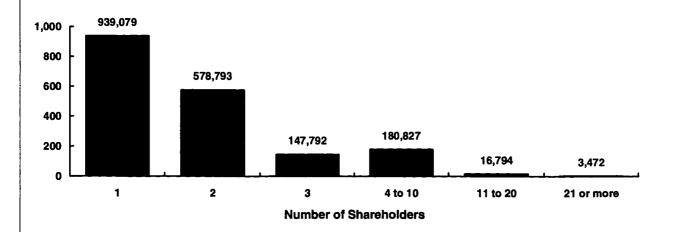

#### **Income from Rental Real Estate**

Also new for 1993 are data on rental real estate income and deductions (Table 5). For 1993, about 164.0 thousand S Corporations reported rental real estate income and expenses on the Form 8825 Rental Real Estate Income and Expenses of a Partnership or an S Corporation. Net rental income (less loss) was \$1.2 billion. As would be expected, the real estate industrial group dominated these statistics (Figure F). The finance, insurance, and real estate division reported \$424.5 million in net rental income. Not surprisingly, the real estate industry group accounted for nearly all of the rental real estate income within this

#### Figure E

1 Includes mining and construction.

division, \$401.2 million.

The number of S Corporation returns reporting rental real estate net income (less deficit) increased from 134.1 thousand for 1992 to 164.0 thousand in 1993 [7]. The average amount of net income (less deficit) from rental real estate increased from \$3,187 for 1992 to \$7,064 for 1993. This was mostly due to a decrease in the average deficit amount, from \$37,389 for 1992 to \$28,731 for 1993. The largest increase occurred in the finance, insurance, and real estate division. Rental real estate net income (less deficit) increased from a net loss of \$148.1 million for 1992 to \$424.5 million for 1993. The largest increase, \$421.6 million, came from the real estate industry group. Of all returns with net income (less deficit) from rental real estate, 68.1 percent were in this industry group.

The deficit amount for rental real estate income for 1993 was \$2.0 billion. The real estate industry group reported most of this loss, \$1.7 billion. The average loss for an S Corporation in this group was \$31,227. This loss flowed through to the individual shareholder. Generally, any rental activity is defined as a "passive activity", even if the shareholder materially participates in the operation

of the company. There is a limit to the amount of losses, deductions, and credits that shareholders may claim from passive activities [10].

#### Summary

The Tax Reform Act of 1986 had a marked effect on the incentives and advantages of a company electing S Corporation status. For 1993, S Corporations continued to be a large portion of returns relative to all corporation income tax returns, yet were small in terms of assets held.

The majority of S Corporations had either one or two shareholders. A large portion of S Corporations was concentrated in the services division, but these tended to be the smaller corporations. Total net income (less deficit) for S Corporations for 1993 was \$66.2 billion, which amounted to 13.3 percent of the adjusted total for all corporations.

#### **Data Sources and Limitations**

#### **Data Sources**

The Form 1120S filed by S Corporations was substantially revised for Tax Year 1987 to reflect provisions of the Tax Reform Act of 1986. As a result, receipts and deductions

are reported separately for trade or business activities; for rental real estate activities; for rental activities other than real estate; and for portfolio income. These changes are reflected in the statistics by presenting net income or deficit for each of these components and also by showing total net income or deficit (Table 1). The total net income (less deficit), \$66.2 billion, is the result of combining net income (less deficit) from trade or business, \$54.1 billion; rental real estate net income (less deficit), \$1.2 billion; net income(less deficit) from rentals other than real estate, \$0.6 billion; and portfolio net income (less deficit), \$10.3 billion. Portfolio net income (less deficit) comprised dividends, \$0.7 billion; interest, \$5.2 billion; royalties, \$0.3 billion; net short-term capital gains less net short-term capital losses, \$0.3 billion; net long-term capital gains less net long-term capital losses, \$3.7 billion; and other portfolio net income less deficit, \$0.2 billion. The sum of these components is a comprehensive measure of S Corporation profits, as computed under provisions of the Internal Revenue Code. It also enables comparisons to be made with data for S Corporations for years prior to 1987. Starting with 1987, Statistics of Income -- Corporation Income Tax Returns has presented annual data on S Corporations only for the receipts, deductions, and net income (or deficit) from a trade or business. Data for the other sources of receipts and for the net income from these sources were not tabulated. Consequently, totals for these receipts and for the net income of all corporations are understated.

The industry codes used indicate the type of business activity from which the corporation received its income, or the largest portion of its income if it was engaged in more than one kind of activity. Although some industry codes are unusual for S Corporations, e.g., insurance, (based on the restrictions in the Internal Revenue Code), the data show a small number of corporations in these industries. This could be due to either inconsistent reporting of corporations' principal industrial activity (generally in finance, insurance, and real estate), or to exceptions to Subchapter S rules.

#### Sample Selection and Sampling Error

The statistics for Tax Year 1993 are based on a stratified probability sample of S Corporation income tax returns with accounting periods ended July 1993 through June 1994 posted to the Internal Revenue Service Business Master File during July 1993 through June 1995. The estimates were based on a sample stratified on combinations of total assets and income at rates ranging from 0.25 percent to 100 percent. The sample was selected after administrative processing was complete, but before audit examination. A sample of 21,897 active S

Corporation returns was selected. Based on this sample the number of active S Corporations for 1993 was estimated to be 1,901,505.

Because the estimates are based on a sample, they are subject to sampling error. To properly use the data, the magnitude of the potential sampling error needs to be known. Coefficients of variation (CV's) are used to measure this magnitude. Figure G presents coefficients of variation for S Corporations by size of assets. The smaller the coefficient of variation, the more reliable the estimate is judged to be.

#### **Notes and References**

- [1] The net income (less deficit) used for the calculation of percent of net income for 1993 is adjusted to include portfolio income, rental income and other income items which are not included in the S Corporation net income (less deficit) from a trade or business.
- [2] For a more complete explanation see Internal Revenue Service, *Internal Revenue Code Subchapter S [Section 1361(a)]*.
- [3] Internal Revenue Service, Statistics of Income Corporation Income Tax Returns, annual.
- [4] The average assets for an S Corporation in 1993 were \$457.7 thousand, as compared to the average assets for a taxable corporation which were \$10.2 million.
- [5] For a more complete explanation of the effects of TRA 86 on S Corporations, see Gill, Amy, "S Corporation Returns, 1992, "Statistics of Income Bulletin, Spring 1995, Volume 14, Number 4.
- [6] In summary, the General Utilities doctrine states that a corporation does not recognize gain or loss on a distribution of appreciated or depreciated property to its shareholders with respect to their stock. The Tax Reform Act of 1986 ended the possibility of corporate liquidation to avoid corporate taxation on unrealized capital gains. The repeal of the General Utilities doctrine encourages new businesses to form outside the taxable corporate sector.
- [7] Source: unpublished Statistics of Income tabulations.
- [8] Some of the business credits are: credit for alcohol used as a fuel; low-income housing credit; qualified rehabilitation expenditures related to rental real estate activities; credits related to rental real estate activities; credits related to other rental activities; and other credits.

<sup>1</sup> Includes returns not allocable by industrial division.

- [9] For a more complete explanation of the corporatelevel taxes reported by S Corporations, see Gill, Amy, "S Corporation Returns, 1992," Statistics of Income Bulletin, Spring 1995, Volume 14, Number 4.
- [10] The passive activity rules provide that losses from passive activities can generally be applied only against income from passive activities. In reporting

the corporation's income or losses from rental activities, the corporation must separately report rental real estate activities and rental activities other than rental real estate activities. Shareholders who actively participate in a rental real estate activity may be able to deduct part or all of their rental real estate losses from income from nonpassive activities. The combined amount of rental real estate losses from all sources that may be claimed in this way is limited to \$25,000.

by Margaret Riley

n extensive revision of the Tax Year 1992 Form 990-T, Exempt Organization Business Income Tax Return, introduced a change in reporting requirements, and this may be the chief reason for an overall 5-percent drop in the number of returns filed, from 32,690 for 1991 to 31,122 for 1992. However, the drop in the number of filers did not adversely affect the growth of the four major financial items for 1992: \$4.1 billion of gross "unrelated business income" (UBI), up 20 percent from 1991; \$5.2 billion of total deductions, up 28 percent; and \$485.9 million of "unrelated business taxable income" (UBTI) and \$132.4 million of total income tax, each up 13 percent [1].

Only 3 percent of the more than 1 million population of tax-exempt organizations to which the UBI tax provisions applied filed Tax Year 1992 Forms 990-T to report income from unrelated business activities [2]. The proportion of organizations reporting UBI was the same for Tax Year 1991.

# Effect of Tax Year 1992 Reporting Requirement Changes

Tax-exempt organizations with gross UBI of \$10,000 or less, which accounted for 40 percent of all filers, were largely responsible for the 5-percent decrease in total Form 990-T filings (Figure A) [3]. They filed 16 percent fewer returns between 1991 and 1992. These smaller organizations were required for the first time to report itemized sources of gross unrelated business income, rather than the single total amount required previously [4]. (For a listing of these itemized sources, see the definition of gross UBI in the Explanation of Selected Terms section; see, also, the individual definitions of each source.)

The 16-percent decrease in the number of returns filed by smaller organizations likely was an effect of the new requirement for 1992 to calculate and report the detailed sources of gross UBI. The main purpose of the Form 990-T revision was to improve the accuracy of the information reported, by making the reporting format similar to other Federal business income tax forms and by providing the smaller organizations with a specific format for itemizing and computing gross UBI. In the absence of a specific format prior to 1992, it generally was not known how smaller organizations determined if their gross UBI was \$10,000 or less, which, in turn, allowed them to bypass the more detailed income and deduction sections of the return. With the requirement to follow an explicit itemization format, perhaps organizations that previously had reported

[Money amounts are in thousands of dollars]

Item	1990	1991	1992
	(1)	(2)	(3)
Number of returns, total	31,091	32,690	31,122
Number with gross unrelated business		1	1 .
income (UBI) of \$10,000 or less	13,274	14,819	12,400
Number with gross UBI over \$10,000	17,817	17,871	18,722
Gross UBI	3,511,499	3,384,698	4,069,149
Total deductions	4,143,101	4,047,183	5,182,551
Unrelated business taxable income (UBTI)			
less deficit	-631,605	-662,487	-1,113,402
UBTI	388,890	431,143	485,874
Deficit	1,020,495	1,093,630	1,599,276
Total income tax	99,119	116,933	132,378

a single total of gross UBI between \$1,000 and \$10,000 (requiring only a "partial" return to be filed) found for 1992 that their calculated gross UBI was either below the \$1,000 filing threshold (requiring no return to be filed) or above \$10,000 (requiring a more detailed return to be filed) [5].

Larger organizations, those with gross UBI greater than \$10,000, filed 18,722 returns for 1992, a 5-percent increase over the number filed for 1991. As a whole, these organizations accounted for the growth in total gross UBI, total deductions, taxable income, and total income tax (Tables 2 and 3). The 1992 tax form revision did not greatly affect these organizations because they had always been required to calculate detailed gross income and expense items from unrelated business activities on schedules that were part of the tax return. They were still required to complete these schedules for 1992, but then had to transfer the schedule totals to the new income statement section of the tax form that applied to all organizations.

#### **Primary Unrelated Business Activities**

The discussion of unrelated business activities that follows takes into consideration only the primary (first) activity code of three possible codes reported on the Form 990-T. If an organization was engaged in more than one unrelated business activity, it was instructed to list the code of the largest activity in terms of gross UBI first, and then the codes for the next two largest activities. Because it is not possible to distribute gross UBI according to each type of activity when more than one activity was reported (filers were not required to do this), the amount of gross UBI assigned to primary unrelated business activities discussed in this section is overstated.

Three of the 10 principal industrial groupings--services; finance, insurance, and real estate; and retail tradeaccounted for 91 to 92 percent of all Forms 990-T and the

total gross UBI, total deductions, taxable income, and total income tax reported on those forms (Table 5). The predominance of these three industry groupings varied for small versus large organizations in terms of gross UBI, but they encompassed the primary unrelated business activities of both types of organizations (Figure B). About 84 percent of returns showing some type of service as a primary unrelated business activity could be classified under the sub-groupings of business services, amusement and recreation services, and health services [6]. More organizations reported the business service of advertising (including printing) as their primary business activity than any other single activity chosen from a list of 160 possibilities [7]. These organizations, most of which were charitable organizations, business leagues, chambers of commerce, and real estate boards, accounted for 18 percent of returns filed, 18 percent of gross UBI, and 8 percent of total tax.

Some form of finance, insurance, or real estate enterprise was given as the organization's primary unrelated business activity on nearly 40 percent of the Forms 990-T filed for 1992. Twenty-eight percent of total gross UBI and 63 percent of total income tax reported by all filers were attributable to this group of returns. Organizations whose primary business activities were included in the industrial sub-groupings of real estate; insurance; investment activities of Internal Revenue Code section 501(c)(7), (9), (17), and (20) organizations; and unrelated "debt-financed" activities accounted for 91 percent of gross UBI reported for the finance, insurance, and real estate grouping. (See the Appendix to this article for a description of the various types of tax-exempt organizations, which are listed by Internal Revenue Code section.)

Eleven percent of exempt organizations reported primary unrelated business activities in the retail trade industrial grouping. They accounted for 10 percent of gross UBI and 4 percent of total income tax. The majority of returns allocated to this grouping, about 69 percent, indicated that these organizations operated eating and drinking facilities as their primary business activity. Another 28 percent reported "miscellaneous" retail activities, which included the operation of pharmacies, book stores, and gift shops.

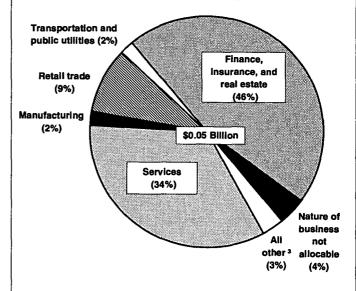

#### **Unrelated Business Income**

Ninety-nine percent of gross UBI was reported by the 18,722 larger organizations (those with gross UBI of more than \$10,000). The larger organizations also collectively accounted for between 97 and 98 percent of the total deductions, taxable income, and total income tax reported by all organizations.

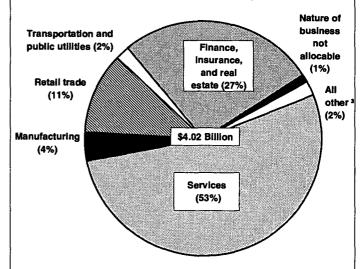

#### Figure B

Gross Unrelated Business Income (UBI), by Size of Organization and Industrial Grouping, Tax Year 1992

#### Gross UBI of Small Organizations 1

#### Gross UBI of Large Organizations 2

- <sup>1</sup> Small organizations are those with gross UBI of \$10,000 or less.
- <sup>2</sup> Large organizations are those with gross UBI over \$10,000.
- 3 Includes "exploited exempt activities."

The number of tax-exempt organizations reporting gross UBI of \$1 million or more grew by 45 percent between 1991 and 1992, and their aggregate gross UBI increased by 31 percent, to \$2.2 billion. The 627 organizations in this group were only 2 percent of all Form 990-T filers, but they accounted for 54 percent of total gross UBI and 64 percent of total income tax reported for 1992 (Table 2).

Gross profit (less loss) from sales and services and advertising income were the largest sources of gross UBI reported by all organizations, large and small, alike (Table 6). Combined, these two items accounted for 64 percent of the income of large organizations and 44 percent of the income of small organizations. Between 1991 and 1992, advertising income of large organizations rose by slightly-more than 50 percent, mainly the result of a 146-percent increase in the advertising income of large nonprofit "charitable" organizations exempt from tax under section 501(c)(3) [8].

"Other" income (less loss), which includes types of \_\_income not specifically required to be reported elsewhere on the return (such as insurance benefits fees; member support fees; commissions; refunds of tax payments; recoveries of bad debts; and returned contributions, if they were previously reported as deductions), was the third largest source of gross UBI reported by large organizations, accounting for 14 percent of the total. Following gross profit (less loss) from sales and services and advertising income, investment, rental, and partnership income individually played an important role in the gross UBI of small organizations, with each source contributing 10 to 15 percent of the total. "Other" income (less loss) accounted for another 8 percent of small organizations' gross UBI.

Section 501(c)(3) charities accounted for over one-half of total gross UBI for 1992 (Table 1). They also produced about half of all large organizations' gross UBI. The charities and section 501(c)(7) social and recreational clubs each accounted for a quarter of total gross UBI reported by small organizations. Together, five types of organizations reported nearly 90 percent of total gross income from unrelated business activities: charitable organizations exempt under section 501(c)(3); civic leagues and social welfare organizations exempt under section 501(c)(4); business leagues, chambers of commerce, and real estate boards exempt under section 501(c)(6); social and recreational clubs exempt under section 501(c)(7); and voluntary employees' beneficiary associations exempt under section 501(c)(9) (Figure C) [9].

#### **Deductions**

Organizations with gross UBI of \$10,000 or less were not required either for 1992 or previous years to report the detailed expense and deduction items that larger organizations reported. Prior to 1992, smaller organizations were required to report only two deduction items, total deductions and the \$1,000 "specific deduction" allowed all organizations. For 1992, these organizations had to report a total for expenses directly allocable to certain gross UBI components and a total for any other deductions, excluding the "specific deduction" and any "net operating loss"

Gross profit (less loss) from sales and services and advertising income — — were the two largest sources of exempt organizations' gross unrelated business income.

carryover, which had to be reported separately.

The largest portion of the \$5.2 billion of total deductions, 56 percent, was attributable to section 501(c)(3) organizations, followed in descending order by organizations tax exempt under sections

501(c)(6), 501(c)(4), 501(c)(7), 501(c)(5), and 501(c)(9). These latter organizations collectively accounted for another 37 percent of the total. "Set-asides," a fairly large proportion of total deductions taken by section 501(c)(9) organizations with gross UBI over \$10,000, nearly doubled between 1991 and 1992, from \$55.1 million to \$109.1 million. (Set-asides are defined in the Explanation of Selected Terms section.)

Total deductions and some of its components are somewhat understated because of the way cost of sales and services was reported on Form 990-T. Filers had to deduct the cost of sales and services from their gross receipts from sales and services in order to compute gross profit (less loss) from sales and services, which was the amount reported as a gross UBI component in the income statement. As a consequence, cost of sales and services was not included in the deductions section of the return. Also, because cost of sales and services can include some of the same types of expenses that are reported as separate deductions elsewhere on the return, some of the separate components also are understated. The amount of cost of sales and services deducted from gross receipts in computing gross profit (less loss) from sales and services was \$1.4 billion, which means that prior to deducting these costs, the amount of gross receipts from sales and services (minus returns and allowances) was \$3.1 billion for 1992.

The four largest types of deductions taken by organizations with gross UBI over \$10,000 were the "net operating loss" carryover, "other" deductions (such as professional

services fees, insurance costs not related to employee benefits, equipment costs, rent paid, travel expenses, educational expenses, utilities, and general office costs), salaries and wages (excluding executive compensation), and direct advertising costs (Table 7). Together, these deductions made up three-fourths of the \$5.1 billion of total deductions reported by large organizations. Executive compensation was a very small component of these total deductions, less than 1 percent.

#### **Unrelated Business Income Tax**

After deductions, exempt organizations reported a negative \$1.1 billion of unrelated business taxable income less deficit for 1992. However, of the 31,122 organizations filing Forms 990-T, 14,690 reported positive taxable income of \$485.9 million and 14,443 reported total income tax of \$132.4 million, an increase of 13 percent over the tax liability reported for 1991 (Table 4). The proportion of all filers reporting taxable income and total income tax was up 3 percent and 4 percent, respectively. A deficit was reported by 12,352 organizations and amounted to \$1.6 billion, a 46-percent increase over 1991 (Table 3).

Some organizations made adjustments to the unrelated business income tax for additional taxes and certain credits. While the largest share of total income tax was the tax on unrelated business income, total tax also could have included "recapture taxes" (such as from recomputation of prior-year investment or low-income housing credits), the "alternative minimum tax" (AMT), and the environmental tax. Also, the foreign tax credit, general business credit, prior-year minimum tax credit, and other credits (such as the U.S. possessions tax credit, nonconventional source fuel credit, and qualified electric vehicle credit) were subtracted from the unrelated business income tax in computing total tax.

Approximately \$1.2 million of total credits against unrelated business income tax was reported by 228 organizations. The total amount included \$0.5 million of general business credits, \$0.4 million of foreign tax credits, \$0.1 million of credits for prior-year minimum tax, and \$0.1 million of other credits. The AMT, an addition to "tax after credits" was reported on 28 Forms 990-T and amounted to \$0.6 million. Eleven organizations reported the additional environmental tax, amounting to \$0.1 million. No returns showed a "recapture tax."

There were 11,482 exempt corporations and 2,961 exempt trusts that reported total income tax, out of a respective total of 27,397 and 3,725 Form 990-T filers. Exempt corporations were liable for \$76.4 million, or 58 percent, of total income tax and exempt trusts were liable

for \$56.0 million. The unrelated business taxable income of exempt corporations and trusts was taxed at the regular corporate or trust tax rates that were in effect for the 1992 Tax Year. The corporate tax rate schedule remained unchanged between 1991 and 1992. For trusts, the ceiling

Sixty-eight percent of the total unrelated business income tax was reported by non-profit charitable organizations and voluntary employee beneficiary associations.

on income tax brackets was revised upward for 1992, resulting in lower marginal tax rates for some organizations. Overall, however, exempt trusts reported a 23-percent increase in taxable income and exempt corporations reported a 7-percent increase, resulting, for the most part, in the respective 21-percent and 8-percent increases in total income tax liability.

Thirty-five percent of total income tax liability was attributable to section 501(c)(3) charitable organizations; 33 percent to section 501(c)(9) voluntary employees' beneficiary associations; 12 percent to 501(c)(6) business leagues, chambers of commerce, and real estate boards; 8 percent to section 501(c)(7) social and recreational clubs; and 5 percent to section 401(a) trusts that acted as fiduciary agents for profit-sharing plans. Although section 501(c)(9) associations were liable for nearly one-third of the total income tax reported by all organizations, they accounted for only 3 percent of all returns filed and 7 percent of gross UBI.

The high percentage of tax reported by section 501(c)(9) associations can be attributed, in part, to a limitation on amounts deducted from income as "set-asides" for employee welfare benefit plans. If plans were overfunded, meaning that investment income was set aside that exceeded qualified asset account limits, then a deduction for the set-aside amount in excess of the limitation was not allowed; the excess amount was taxed as unrelated business income, instead. Another factor affecting the relatively high amount of tax reported by these associations is that their investment portfolios are usually overseen by only one or two trust managers, so deductions for salaries and wages, a significant deduction for many other types of organizations, are relatively small, resulting in higher taxable income.

#### Summary

Tax-exempt organizations filed 5 percent fewer Forms 990-T, Exempt Organization Business Income Tax Return, for 1992, most likely the result of a revised tax form that introduced more extensive reporting requirements aimed at improving the accuracy of information provided.

Organizations with gross unrelated business income (UBI)

of \$10,000 or less were largely responsible for this drop, with 16 percent fewer returns filed. Larger organizations, those with gross UBI over \$10,000, filed 5 percent more returns for 1992 over 1991 and accounted for the increases in gross UBI, total deductions, taxable income, and total income tax between the two years.

Three major industrial groups--services; finance, insurance, and real estate; and retail trade--accounted for 90 percent or more of all returns filed, total gross UBI, total deductions, taxable income, and total tax. Organizations reporting various types of services as primary business activities were responsible for 53 percent of gross UBI and 25 percent of total income tax. Finance, insurance, and real estate activities of tax-exempt organizations accounted for 28 percent of gross UBI and 63 percent of total tax.

Section 501(c)(3) charitable organizations accounted for 51 percent of gross UBI and 56 percent of total deductions reported on all Forms 990-T. As a group, four other types of organizations reported an additional 38 percent of gross UBI and 32 percent of total deductions: civic leagues and social welfare organizations, exempt under section 501(c)(4); business leagues, chambers of commerce, and real estate boards, exempt under section 501(c)(6); social and recreational clubs, exempt under section 501(c)(7); and voluntary employees' beneficiary associations, exempt under section 501(c)(9). The two largest sources of gross UBI were gross profit (less loss) from sales and services and advertising income, accounting for 43 percent and 21 percent, respectively, of the total.

For organizations with gross UBI over \$10,000, the largest components of total deductions were the net operating loss carryover, salaries and wages, direct advertising costs, and "other" deductions (not specifically reported elsewhere). These four types of deductions accounted for 75 percent of the total reported by all large organizations. Small organizations were not required for either 1992 or previous years to report all deduction items separately, as were the large organizations; therefore, comparisons with other years cannot be made. Small organizations reported less than 2 percent of the \$5.2 billion of aggregate total deductions taken by all organizations. After deductions, exempt organizations reported -\$7.1 billion of unrelated business taxable income less deficit. About 53 percent of these organizations had no taxable income or they reported a deficit, amounting to \$1.6 billion. The remaining organizations reported taxable income of \$0.5 billion.

Total unrelated business income tax liability for 1992 was \$132.4 million, an increase of 13 percent over 1991. Seventy-nine percent of the organizations reporting the

tax were exempt corporations and 21 percent were exempt trusts. Section 501(c)(3) charitable organizations; section 501(c)(6) business leagues, chambers of commerce, and real estate boards; section 501(c)(7) social and recreational clubs; section 501(c)(9) voluntary employees' beneficiary organizations; and section 401(a) trusts that were fiduciary agents for profit-sharing plans accounted for 92 percent of the total income tax reported on all Forms 990-T filed for 1992.

#### **Data Sources and Limitations**

The statistics in this article are based on a sample of Tax Year 1992 Forms 990-T, Exempt Organization Business Income Tax Return. The Internal Revenue Service required organizations having accounting periods beginning in 1992 (and, therefore, generally ending between December 1992 and November 1993) to file a 1992 Form 990-T. Because the accounting periods of the organizations filing a 1992 Form 990-T vary, the unrelated business financial activities covered in this article span the period January 1992 through November 1993 (although the majority of activities occurred during Calendar Year 1992).

The population from which the 1992 sample was drawn consisted of Form 990-T records posted to the IRS Business Master File system during 1993 and 1994. The returns in the sample were stratified based on the absolute value of gross unrelated business income (UBI). The sample of 5,181 returns was selected from a population of 41,496. After excluding returns that were selected for the sample but later rejected, the sample size was 5,017 and the estimated population was 31,122. Rejected returns included those which had gross UBI below the \$1,000 filing threshold, were filed only to claim a refund, or were filed for a part-year accounting period that began in a year other than 1992. (For example, a final return filed for January - June 1993 would have an ending accounting period that fit into the December 1992 to November 1993 ending range for a Tax Year 1992 return, but did not fit the criteria of having an accounting period beginning in 1992.)

Sampling rates ranged from 4.5 percent (returns with an absolute value of gross UBI less than \$20,000) to 100 percent (returns with an absolute value of gross UBI of \$300,000 or more). When it was determined that gross UBI was less than the \$1,000 filing threshold, the return was excluded from the study.

Only the primary unrelated business activity code was used for the statistics to present the types of unrelated business activities for exempt organizations. In addition to the primary activity code, up to two other codes could have been reported if the organization engaged in more

than one unrelated activity. However, because income was not reported separately by activity code if the organization entered more than one code, it was not possible to distribute gross UBI by type of activity when more than one business activity was reported. Therefore, when more than one code was provided, the statistics show all of gross UBI, as well as other financial information, assigned to the primary code given.

The data presented were obtained from returns as originally filed with the IRS. They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment, were not incorporated into the data base.

Because the data are based on a sample, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure D shows CV's for selected financial data. CV's are not shown for classes of gross UBI in ranges above "\$100,000 under \$500,000" because returns with gross UBI of \$300,000 or more were sampled at the 100-percent rate and, therefore, are not subject to sampling variability. A discussion of the reliability of estimates based on samples and methods for evaluating both the magnitude of sampling and nonsampling error and the precision of sample estimates can be found in the general Appendix in this issue.

#### Figure D

# Coefficients of Variation for Selected Financial Items, Tax Year 1992

Size of gross unrelated busines income	Gross unrelated business income	Total deductions	Unrelated business taxable income	Total income tax
	Coeffic	cient of varia	ation (percer	ntages)
··	(1)	(2)	(3)	(4)
Total	0.64	1.87	9.42	2.52
\$1,000 under \$10,001 1	2.59	10.73	6.22	7.15
\$10,001 under \$100,000 1	0.67	10.19	4.09	5.41
\$100,000 under \$500,000	0.56	2.58	4.23	4.51
\$500,000 under \$1,000,000	N/A	N/A	N/A	N/A
\$1,000,000 under \$5,000,000.	N/A	N/A	N/A	N/A
\$5,000,000 or more	N/A	N/A	N/A	N/A

¹ The bracketed gross unrelated business income (UBI) amounts of \$1,000 under \$10,001 and \$10,001 under \$100,000 reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required).

N/A - Not applicable.

#### **Explanation of Selected Terms**

Advertising Income.—Gross income realized by an exempt organization from the sale of advertising in a periodical was gross income from an unrelated trade or business activity involving the "exploitation of an exempt activity," namely, the circulation and readership of the periodical developed by producing and distributing the readership content of that periodical. Advertising income was reported separately from other types of "exploited exempt activity income." (See the explanation of Exploited Exempt Activity Income.) Section 501(c)(7), (9), (17), and (20) organizations (each described in the Appendix to this article) reported gross advertising income, as well as other types of "exploited exempt activity income," as gross receipts from sales and services. All other organizations reported this income separately.

Capital Gain Net Income.--Generally, organizations required to file Form 990-T (except organizations exempt under sections 501(c)(7), (9), (17), and (20)) were not taxed on the net gains from the sale, exchange, or other—disposition of property. However, net capital gains on sales of debt-financed property, certain gains on the cutting of timber (section 1231), and gains on sales of certain depreciable property (described in sections 1245, 1250, 1252, 1254, and 1255) were taken into account in computing capital gain net income. (See the explanation of Investment Income (Less Loss) for information regarding investment income of section 501(c)(7), (9), (17), and (20) organizations.)

Deductions Directly Connected With Unrelated Business Income .-- These were deductions allowed in computing "unrelated business taxable income," if they otherwise qualified as income tax deductions under the Internal Revenue Code and if they had a "proximate and primary" relationship to the carrying on of an unrelated trade or business. Allowable deductions included those directly connected with rental of personal property; those allocable to unrelated debt-financed income; those directly connected with investment income of Code section 501(c)(7), (9), (17), and (20) organizations; those allocable to interest, annuities, royalties, and rents received from controlled organizations; those allocable to "exploited exempt activity income" other than advertising; direct advertising costs; and deductions for compensation of officers, directors, and trustees; salaries and wages; repairs; bad debts; interest; taxes; depreciation (unless deducted elsewhere); depletion; contributions to deferred compensation plans; contributions to employee benefit plans; the "net operating loss" carryover; and "other deductions." Exempt organizations with gross unrelated business income (UBI) above \$10,000 were required to report each deduction

component separately. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 reported a single total of the first five types of directly connected expenses listed above (those described as "allocable to") and a single total for all other types of deductions (both deductions directly connected with UBI and those not directly connected, both defined below), except for two items that were required to be reported separately: the "net operating loss" deduction and the "specific deduction," also defined below.

Deductions Not Directly Connected With Unrelated Business Income.—The component deductions were "set-asides," "excess exempt expenses," charitable contributions, and the "specific deduction." The specific deduction was reported by all organizations; the other types of deductions not directly connected with UBI were reported separately only by exempt organizations with gross UBI above \$10,000. (See, also, the explanations of Set-asides, Excess Exempt Expenses, and the Specific Deduction.)

Excess Exempt Expenses .-- Two types of "excess" expenses were allowed as a deduction from unrelated business income: (1) excess exempt expenses attributable to commercial exploitation of exempt activities, and (2) excess exempt expenses attributable to advertising income. In the case of "exploited" exempt activity income (see the explanation of Exploited Exempt Activity Income, Except Advertising, below), if the expenses of the organization's exempt activity exceeded the income from the exempt activity, then the excess of exempt expenses over exempt income could be used to offset any positive net unrelated business income produced from exploiting the exempt activity, to the extent that it did not result in a loss. Excess expenses of a commercially exploited exempt activity could not be used to offset income from another type of unrelated business activity if the unrelated activity did not exploit that particular exempt activity. In the case of excess exempt expenses attributable to advertising income, if the expenses attributable to producing and distributing the readership content of a periodical exceeded the circulation income, then the excess of readership costs over circulation income could be used to offset any net gain from advertising (gross advertising income less direct advertising costs), to the extent that it did not result in a loss.

Exploited Exempt Activity Income, Except Advertising.—In some cases, exempt activities create goodwill or other intangibles that are capable of being exploited in a commercial manner. When an organization exploited such an intangible in commercial activities that did not contribute importantly to the accomplishment of an exempt purpose, the income it produced was gross income

from an unrelated trade or business. An example of this type of activity would be an exempt scientific organization with an excellent reputation in the field of biological research that exploits its reputation regularly by selling endorsements of laboratory equipment to manufacturers. Endorsing laboratory equipment would not have contributed importantly to the accomplishment of any purpose for which tax exemption was granted to the organization. Accordingly, the income from selling such endorsements is gross unrelated business income. Exploited exempt activity income from advertising was reported separately from other types of exploited exempt activity income (see the explanation of Advertising Income). Section 501(c)(7), (9), (17), and (20) organizations reported income from exploited exempt activities as gross receipts from sales and services. All other organizations reported this income separately.

Gross Profit (Less Loss) from Sales and Services.--This was the gross profit (less loss) from any unrelated trade or business regularly carried on that involved the sale of goods or performance of services. It did not include income from unrelated business activities that were required to be reported separately on any of the tax return schedules. For example, a section 501(c)(7) social club would include gross restaurant and bar receipts from nonmembers in the calculation of gross profit (less loss) from sales and services, but would report its investment income from sales of securities on the required return schedule. Gross profit (less loss) from sales and services is computed as gross receipts from sales or services, less returns and allowances, minus cost of sales and services.

Gross Unrelated Business Income (UBI). -- This was the total gross unrelated business income (see the explanation of Unrelated Business Income), prior to reduction by allowable deductions used in computing unrelated business taxable income. All organizations were required to report detailed sources of gross UBI. The components of gross UBI, as shown on the tax return, were gross profit (less loss) from sales and services; capital gain net income; net gain (less loss), sales of noncapital assets; net capital loss deduction (trusts only); income (less loss) from partnerships; rental income; unrelated debt-financed income; investment income (less loss) of Code section 501(c)(7), (9), (17), and (20) organizations; annuities, interest, rents, and royalties from controlled organizations; "exploited exempt activity" income; advertising income; and "other income" (less loss). (For an explanation of how income is allocated to the components of gross UBI, see the separate listings of each component.)

Income from Controlled Organizations.--When an exempt organization controls another organization, the

gross interest, annuities, royalties, and rents from the controlled organization are included in the gross UBI of the controlling organization at a specified ratio, depending on whether the controlled organization is exempt or nonexempt. The rules for debt-financed property did not apply to passive income from controlled organizations. (See the explanation of Unrelated Debt-financed Income.)

Income (Less Loss) from Partnerships.--If an organization was a partner in any partnership that carried on an unrelated trade or business, this was the organization's share of partnership gross unrelated business income less its share of partnership deductions that were directly connected with the unrelated income.

Investment Income (Less Loss) .-- This item was reported only by organizations exempt under sections 501(c)(7), (9), (17), and (20) (each described in the Appendix to this article) and included income such as gross unrelated debt-financed income, gross income from the ownership or sale of securities, and set-asides deducted from investment income in previous years that were subsequently used for a purpose other than that for which a deduction was allowed. (See, also, the explanation of Set-asides.) All gross rents (except those that were exempt-function income) of section 501(c)(7), (9), (17), and (20) organizations were treated as unrelated business income and were reported as "rental income." Organizations exempt under sections other than 501(c)(7), (9), (17), and (20) did not report "investment income (less loss)." Generally, these organizations' dividend, interest, rental and annuity income was not taxed as unrelated business income, unless it was income from a controlled organization or debt-financed income, or if the rents were of the type described in the explanation of rental income. (See explanations of Income from Controlled Organizations, Rental Income, and Unrelated Debt-financed Income.)

Net Capital Loss (Trusts Only).--If an exempt trust had a net capital loss, it was subject to a \$3,000 limitation. This item was reported on Form 990-T as a negative component of gross unrelated business income.

Net Gain (Less Loss), Sales of Noncapital Assets.--This was the gain or loss from the sale or exchange of business property, as reported on Form 4797, Sales of Business Property. Property other than capital assets generally included property of a business nature, in contrast to personal and investment properties which were capital assets

Net Operating Loss Carryover.--The net operating loss carryover (as described in Code section 172) was allowed as a deduction in computing unrelated business taxable income. However, the net operating loss carryback or

carryover (allowed only to or from a tax year for which the organization was subject to tax on unrelated business income) was determined without taking into account any amount of exempt-function income or deductions that had been excluded from the computation of unrelated business taxable income. A "net operating loss" represented the excess of deductions over receipts for specified prior or future years for which an organization reported an overall deficit. The statistics in this article represent only the net operating loss carryover because carrybacks from future years would be reported on an amended return, not on the return as initially filed, which served as the basis for the statistics.

Other Deductions.--This included all types of unrelated business deductions that were not specifically required to be reported elsewhere on the tax return. Examples are fees for financial management, accounting, legal, or consulting services; insurance costs (if not for employee-related benefits); equipment costs; mailing costs; office expenses, such as janitorial services, supplies, or security services; rent; travel expenses; educational expenses; and utilities.

Other Income (Less Loss).--This included all types of unrelated business income that were not specifically required to be reported elsewhere on the tax return. Examples are insurance benefits fees; member support fees; commissions; returned contributions that were deducted in prior years; income from insurance activities that was not properly set aside in prior years; recoveries of bad debts; and refunds of State or local tax payments, if the payments were previously reported as a deduction.

Rental Income. -- For organizations tax exempt under sections other than 501(c)(7), (9), (17), and (20), this was the amount of (1) gross rents from personal property (e.g., computer equipment or furniture) leased with real property, if the rental income from the personal property was more than 10 percent, but not more than 50 percent, of the total rents from all leased property; or (2) gross rents from both real property and personal property leased with real property if the personal property was more than 50 percent of the total rents from all leased property. Except for the second situation covered above, gross rents from real property generally were excluded in computing "unrelated business taxable income." In addition, gross rents from personal property that did not exceed 10 percent of the total rents from all leased property were excluded. Any rents excluded from the explanation of "rental income" had to be considered in terms of their taxability as unrelated business income from controlled organizations or unrelated debt-financed income, in that order. For organizations tax exempt under sections 501(c)(7), (9), (17),

and (20), rental income included all gross rents (except those that were exempt-function income), with no exclusions. (See explanations of Income from Controlled Organizations and Unrelated Debt-financed Income.)

Set-asides.--These amounts were allowed to social clubs (Code section 501(c)(7)), voluntary employees' beneficiary associations (section 501(c)(9)), supplemental unemployment benefit trusts (section 501(c)(17)), and group legal service organizations (section 501(c)(20)) as a deduction from investment income when passive income (generally, investment income) was set aside for one of the following described purposes: (1) the passive income of section 501(c)(7), (9), (17), and (20) organizations generally was not taxed if it was set aside to be used for charitable purposes; (2) in the case of section 501(c)(9), (17), and (20) organizations, passive income was generally not taxed if it was set aside to provide for the payment of life, sick, accident, or other benefits. However, any amounts set aside that exceeded the "qualified asset account" limit, as figured under section 419A, were not allowed as a deduction from unrelated business investment income; they were treated as taxable investment income. A section 419A qualified asset account is any account consisting of assets set aside to provide for the payment of disability benefits, medical benefits, severance pay benefits, or life insurance benefits.

Specific Deduction.--The specific deduction was a \$1,000 deduction, considered "not directly connected" with gross unrelated business income, allowed to all organizations which had positive taxable income after all other types of deductions were taken. If positive taxable income was less then \$1,000, then an organization could take a specific deduction equal to its taxable income.

Total Income Tax.--Total income tax was unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the tax from recomputing certain prior-year credits ("recapture taxes"), the "alternative minimum tax," and the environmental tax.

Unrelated Business Income.—This was income of a taxexempt organization that was from a trade or business which was regularly carried on by the organization and which was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. Activities of producing or distributing goods or performing services from which gross income was derived did not lose their identity as trades or businesses merely because

they were carried on within a larger aggregate of similar activities or within a larger complex of other endeavors that may, or may not, have been related to the exempt purposes of the organization.

Unrelated Business Income Tax.--This was the tax imposed on "unrelated business taxable income (UBTI)." It was determined based on the regular corporate or trust income tax rates that were in effect for the 1992 Tax Year, as specified in the 1992 Instructions for Form 990-T, Exempt Organization Business Income Tax Return booklet

Unrelated Business Taxable Income (UBTI).--This was gross income derived from any unrelated trade or business regularly carried on by an exempt organization, less deductions directly connected with carrying on the trade or business and less other allowable deductions not directly connected. UBTI included only positive amounts of net income and was the "taxable income" amount that was subject to the unrelated business income tax. (See, also, explanations of Deductions Directly Connected With Unrelated Business Income and Deductions Not Directly Connected With Unrelated Business Income.)

Unrelated Business Taxable Income (UBTI) Less
Deficit.—This was derived as described in the explanation
of Unrelated Business Taxable Income (UBTI). UBTI
less deficit included both positive amounts (net income)
and negative amounts (deficit).

Unrelated Debt-financed Income.--Gross income from investment property for which there was acquisition indebtedness outstanding at any time during the tax year was subject to the unrelated business income (UBI) tax. The percentage of investment income to be included as gross UBI was proportional to the ratio of average acquisition indebtedness to the average adjusted basis of the property. Various types of passive income (generally, investment income) were considered to be unrelated debtfinanced income, but only if the income arose from property acquired or improved with borrowed funds and if the production of income was unrelated to the organization's tax-exempt purpose. When any property held for the production of income by an organization was disposed of at a gain during the tax year, and there was acquisition indebtedness outstanding at any time during the 12-month period prior to the date of disposition, the property was considered debt-financed property and the gain treated as unrelated debt-financed income. Income from debtfinanced property did not include rents from personal property (e.g., computers or furniture leased with real property), certain passive income from controlled organizations, and other amounts that were otherwise included in computing unrelated business taxable income.

### **Notes and References**

- [1] Discussions using the term "unrelated business taxable income (UBTI)" in this article refer only to positive amounts of net income (gross income minus total expenses and deductions). This is "taxable income." Data shown as "unrelated business taxable income (UBTI) less deficit" include both positive and negative amounts reported. UBTI less deficit is analogous to the term "net income (less deficit)" used in all other Statistics of Income business programs.
- [2] Based on a total of 1,083,028 exempt organizations reported in the Internal Revenue Service Data Book, Fiscal Years 1993-94. The total excludes Internal Revenue Code section 501(d) religious and apostolic organizations, farmers' cooperatives, and nonexempt charitable trusts treated as exempt organizations, none of which reports tax on the Form 990-T. Also, the total is understated because it excludes churches, exempt under Code section 501(c)(3), which are not required to apply for recognition of tax exemption unless they desire to obtain an Internal Revenue Service (IRS) ruling. However, these churches are required to file Form 990-T if they have unrelated business income. Because of the understatement of the total number of exempt organizations, the proportion of all exempt organizations that filed a Form 990-T is lower than 3 percent.
- [3] Organizations which are determined by the Internal Revenue Service to be tax-exempt under the Internal Revenue Code must file a Federal income tax return (Form 990-T) if they received \$1,000 or more of gross income from business activities that were considered unrelated to the purposes for which they received tax exemption.
- [4] The most significant change made to the 1992 Form 990-T was an extensively revised income statement section of the main part of the tax return for reporting unrelated business income. It contained three columns: (A) gross unrelated business income (UBI); (B) expenses directly related to the type of gross income reported in column (A); and (C) the resulting net UBI. All Form 990-T filers were required to fill out the gross UBI column. Large organizations (those with gross UBI more than \$10,000) also had to fill out columns (B) and (C), while smaller organizations had to report only totals for these two columns. Previously, small organizations had to report only a single total for gross UBI and large organizations reported only net UBI amounts on the income state-

- ment. For 1992, as was the case for prior years, large organizations were required to fill out return schedules to compute gross UBI and related expenses for specified income items. New for 1992, small organizations were instructed to follow the format given in applicable schedules to compute the gross UBI amounts reported in column (A) of the income statement; however, as in previous years, they were not required to complete the schedules.
- [5] Returns filed by organizations with gross unrelated business income (UBI) below the filing requirement threshold (less than \$1,000) were excluded from the statistics presented in this article. Some of these returns were filed inadvertently; others were filed for a specific reason, such as to claim a refund of Form—1099 backup withholding that was withheld erroneously on interest or dividend payments because the payer didn't realize that the payee was a tax-exempt organization.
- [6] Most of the data in this section on industry sub-groups are from unpublished *Statistics of Income* tabulations.
- [7] The total of 160 industry classifications were combined to form the 10 major groupings shown in Table 5. See Office of Management and Budget, Standard Industrial Classification Manual, 1972 and 1987, which lists all of the 4-digit industry codes used by businesses, except for the five additional categories that reflect certain provisions of the Internal Revenue

- Code pertaining to exempt organizations. These additional categories include exploited exempt activities and the first four activities classified under finance, insurance and real estate in Table 5.
- [8] The term "charitable" refers to tax-exempt activities which are charitable, educational, scientific, social, literary or religious in nature.
- [9] For the most recent annual data on Internal Revenue Code section 501(c)(3) through (9) tax-exempt organizations (excluding private foundations and most religious organizations), see Hilgert, Cecelia, "Charities and Other Tax-Exempt Organizations, 1991," Statistics of Income Bulletin, Summer 1995, Volume 15, Number 1. For the most recent annual data on private foundations, see Arnsberger, Paul and Easten. Susan, "Private Foundations and Charitable Trusts. 1992," Statistics of Income Bulletin, Winter 1995-1996, Volume 15, Number 3. Previous articles and papers on tax-exempt organizations and charitable giving for the years 1974-1992 have been published in Internal Revenue Service, Statistics of Income, Compendium of Studies of Tax-Exempt Organizations, 1974-1987, and Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2. See, also, Skelly, Daniel F., "Tax-Based Research and Data on Nonprofit Organizations, 1975-1990," Statistics of Income Bulletin, Summer 1994, Volume 14, Number 1.

# Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section

Code section	Description of organization	General nature of activities
401(a)	Qualified pension, profit sharing, or stock bonus plans	Fiduciary agent for pension, profit sharing, or stock bonus plans
408(e)	Individual Retirement Arrangements	Fiduciary agent for retirement funds
501(c)(2)	Title holding corporations for exempt organizations	Holding title to property for exempt organizations
(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations.  Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of the class of organization
(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
(5)	Labor, agricultural, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
(6)	Business leagues, chambers of commerce, real estate boards, and like organizations	Improving conditions in one or more lines of business
(7)	Social and recreational clubs	Pleasure, recreation, and social activities
(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, sickness, accident, or other benefits to members
(9)	Voluntary employees' beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered by section 501(c)(10))	Providing for payment of life, sickness, accident, or other benefits to members
(10)	Domestic fraternal societies and associations	Lodges, societies, or associations devoting their net earnings to charitable, fraternal, and other specified purposes, without life, sickness, or accident benefits to members
(11)	Teachers' retirement fund associations	Fiduciary association providing for payment of retirement benefits
(12)	Benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, and like organizations	Activities of a mutually beneficial nature implied by the description of the class of organization
(13)	Cemetery companies	Arranging for burials and incidental related activities
(14)	State chartered credit unions and mutual reserve funds	Providing loans to members

# **Appendix**

Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section—Continued

Code section	Description of organization	General nature of activities
501(c)(15)	Mutual insurance companies or associations other than life, if written premiums for the year do not exceed \$350,000	Providing insurance to members, substantially at cost
(16)	Corporations organized to finance crop operations	Financing crop operations in conjunction with activities of a marketing or purchasing association
44.50		
(17)	Supplemental unemployment benefit trusts	Fiduciary agent for payment of supplemental
		unem ployment compensation benefits
(18)	Employee funded pension trusts (created before June 25, 1959)	Providing for payments of benefits under a pension plan funded by employees
(19)	Posts or organizations of past or present members of the armed forces	Activities implied by the nature of the organization
(20)	Prepaid legal service funds <sup>1</sup>	Providing legal services exclusively to employees
(21)	Black lung benefit trusts	Created by coal mine operators to satisfy their liability for disability or death due to black lung disease
(22)	Withdrawal liability payment funds	Providing funds to meet the liability of employers withdrawing from a multi-employer pension fund
(23)	Associations of past and present members of the armed forces founded before 1880	Providing insurance and other benefits to veterans or their dependents
(24)	Trusts described in section 4049 of the Employee Retirement Income Security Act of 1974	Providing funds for employee retirement income
(25)	Title holding corporations or trusts with no more than 35 shareholders or beneficiaries and only one class of stock or beneficial interest	Acquiring real property and remitting all income earned from such property to one or more exempt organizations; pension, profit sharing, or stock bonus plans; or governmental units
501(e)	Cooperative hospital service organizations	Performing cooperative services for exempt hospitals
501(f)	Cooperative service organizations of operating educational organizations	Performing collective investment services for exempt educational organizations

<sup>&</sup>lt;sup>1</sup> Beginning with tax years after June 30, 1992, section 501(c)(20) organizations were no longer tax-exempt.

Table 1.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Unrelated Business Taxable Income (UBTI) Less Deficit, and Total Income Tax, by Internal Revenue Code Section Describing Type of Tax-Exempt Organization

[All data are estimates based on samples--money amounts are in thousands of dollars]

<sup>\*</sup>Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding. See the Appendix to this article for a listing of the types of tax-exempt organizations, by the Internal Revenue Code section describing them.

<sup>\*\*</sup>Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ Excludes cost of sales and services which was subtracted from gross receipts from sales and services in computing gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations, cost of sales and services was \$1.4 billion.

<sup>&</sup>lt;sup>2</sup> "Total deductions" includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

<sup>3</sup> Excludes returns with unrelated business taxable income (UBTI) less deficit equal to zero.

<sup>&</sup>lt;sup>4</sup> Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the environmental tax.

<sup>\*</sup>Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ All organizations were required to report each income item, as shown in columns 7 through 30. However, only organizations with gross UBI over \$10,000 were required to report each expense item and deduction, as shown in columns 10 through 59 of Table 7. Sources of gross UBI are shown separately for these larger organizations in columns 31 through 54 of this table in order to facilitate comparison with Table 7.

<sup>2</sup> Property other than capital assets generally included property of a business nature, in contrast to personal and investment property which were capital assets.

s income from real property and personal property leased with real property.

<sup>4</sup> Reported by Internal Revenue Code section 501(c)(7), (9), (17), and (20) organizations only.

<sup>&</sup>lt;sup>5</sup> Annuities, interest, rents, and royalties.

NOTE: Detail may not add to totals because of rounding.

<sup>\*</sup>Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ Excludes cost of sales and services which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations, cost of sales and services was \$1.4 billion.

<sup>2 &</sup>quot;Total deductions" includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

<sup>3</sup> Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 were required to report only totals for expenses and deductions (except for the specific deduction and net operating loss carryover, which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report each expense and deduction item separately, as shown in columns 10 through 59.

Excludes \$40.0 million of cost of sales and services reported by organizations with gross UBI of \$10,000 or less. See footnote 1.

<sup>&</sup>lt;sup>5</sup> Excludes \$1.3 billion of cost of sales and services reported by organizations with gross UBI over \$10,000. See footnote 1.

<sup>&</sup>lt;sup>9</sup> This deduction was required to be reported as a lump-sum total only and may have included component deductions that were of the same type shown elsewhere in this table. For example, if deductions "allocable to rental income" included depreciation, then that amount of depreciation would not be included in the separately reported item, "depreciation." Therefore, the total amount shown for some of the separately reported deductions may be understated.

<sup>&</sup>lt;sup>7</sup> Reported by Internal Revenue Code section 501(c)(7), (9), (17), and (20) organizations only.

by Tom Petska

tatistics compiled from business tax and information returns reveal some dramatic changes since the mid-1980's, particularly between businesses electing to be taxed at individual versus corporate rates. In the period between 1985-1992, a shift occurred among corporations, from those electing to be subject to the corporation income tax, to S Corporations, those electing to be subject to the individual income tax. This shift was initially observed in the statistics for Tax Year 1987, the first year for which the Tax Reform Act of 1986 (TRA86) was in effect, and is consistent with a response to the tax rate changes of the Act.

This shift to S Corporations, which is more apparent in the number of businesses than in economic activity, is consistent with a response by smaller-size corporations to the marginal tax rate reductions in TRA86. These tax rate reductions made the individual income tax rates, at which S Corporation profits were taxed, more attractive. The fact that this change primarily affected smaller corporations is also consistent with the restrictions affecting S Corporations.

This article is an extension of earlier works on trends in business activity based on statistics compiled from tax and information returns [1,2,3]. It includes the most recent year for which complete Statistics of Income (SOI) data are available for all business types, Tax Year 1992.

### **Taxation and Organizational Choice**

Studies of business dynamics have generally focused on the activities or behaviors of one or more types of businesses. The motives for these studies have generally been: (1) to present and analyze data on one legal form of business, or (2) to examine the pros and cons of shifting from one organizational form to another based on various factors, including incentives (or disincentives) in the Internal Revenue Code. The Internal Revenue Service's Statistics of Income (SOI) studies, as well as others, have most often been of the first type, while many other studies (often from academia) have been of the second type [4,5].

While both approaches have contributed to the understanding of the effect of taxation of businesses, these approaches do not explicitly take into consideration the overall "zero sum" nature of business activity -- that businesses conduct their profit-seeking activities in a variety of legal modes, and that rational economic behavior requires that managers examine various alternative forms of organizational structure in much the same way that they consider the merits of other strategies.

Tom Petska is Chief of the Special Studies and Publications Branch.

To address this issue, data from the major SOI business statistics programs have been compiled and are examined in this article. The advantage of this approach is primarily that organizational changes from one legal form could have offsetting changes in another legal form. By combining summary data for several organizational types, trends in the overall composition can be more readily ascertained.

This section summarizes some of the most significant features of various organizational forms. Since Federal taxation of business income is a complicated topic, these issues are summarized at only a very basic level [6]. In addition, some of the significant tax law changes in the 1985-1992 period are highlighted.

## Business Organizational Forms --

The major legal forms of economic organization that are examined in this article are corporations, partnerships, and nonfarm sole proprietorships [7]. Corporations, in this analysis, are subdivided into those taxed at corporate rates and those electing to be taxed through their shareholders at individual income tax rates (commonly referred to as Subchapter S Corporations or simply S Corporations).

The tax treatments of these organizational forms are briefly summarized below:

Corporations.--Corporation income is generally taxed directly at the business level, then again at the shareholder level, at the applicable rates on dividend income. However, certain provisions in the Internal Revenue Code lessen this effect. First, the corporate income potentially taxable at the shareholder level excludes the taxes paid by the corporation, so income distributed to shareholders is only taxable on the after-tax profits earned by the corporation. Second, the after-tax income of the corporation is not taxable at the shareholder level until it is paid to the latter as dividends or until the shareholder realizes capital gains by selling shares that have appreciated in value. Statistical compilations of corporation income based on tax returns are published annually [8,9].

Subchapter S Corporations are small, closely-held corporations that are not taxed directly. Their income is generally subject to tax only at the owner level, much like partnerships. Owners of S Corporations report their *pro rata* shares of income or loss on their own tax returns. Although S Corporations have attractive features, they do face restrictions, including limitations on the number and type of shareholders and on the classes of stock permitted, and prohibition of foreign or corporate ownership. S Corporation data are also compiled annually and are published in this issue of the *SOI Bulletin* [10].

Partnerships.--The partnership entity is not taxed

directly; each partnership files an annual information return, which includes an income statement, balance sheet (in most cases), and a schedule of allocations or distributions made to each partner. Partners report their allocated shares of income and expenses on their own tax returns. Partners are predominately (though not exclusively) individuals.

Partnerships may be either general partnerships or limited partnerships. Limited partnerships include all partnerships for which the liability of any partner is limited to the amount invested in the business. General partnerships, and general partners as well, face personal liability limited only by their personal resources and the applicable bankruptcy laws. Limited partners are more like corporate shareholders, with liability limited to the amount invested and with no active participation in management of the business. Annual compilations of partnership data are published in the SOI Bulletin [11].

Sole proprietorships.--The profits of nonfarm sole proprietorships are taxed only at the personal (i.e., owner) level. The income statement of proprietorships, which summarizes the income and expenses of the business, is completed on Schedule C (or C-EZ) of the owner's individual tax return. The net income or loss from proprietorships is added to personal income from all other sources and taxed at the applicable individual income tax rates [12]. In effect, the proprietorship acts as a conduit through which the income of the business is passed through to the business owner. Data on nonfarm sole proprietorships are published annually in the SOI Bulletin [13].

Limited Liability Companies.--A relative newcomer among business types is the Limited Liability Company (LLC). These entities have the limited liability of corporations, but are taxed in the partnership model--income and expenses flow through the LLC to the owners, who are taxed on their *pro rata* shares. Unlike S Corporations, however, LLC's do not have nearly as extensive restrictions on the number and composition of owners.

Data on LLC's have not been collected in the past. However, LLC's are now required to report their financial activities on the partnership annual information return (Form 1065), and indicate that they are filing as a LLC. The SOI partnership program identified these entities for the first time for Tax Year 1993 [14]. To provide some perspective on their number and the scope of their financial activities, summary data on LLC's are included in the next section.

### **Tax Law Changes**

Many provisions of tax legislation in the 1985-1992 period may have affected the choice of business organizational

Changes in the marginal tax rates for individuals or corporations may create incentive to switch organizational form to minimize tax liabilities.

form. Clearly, the Tax Reform Act of 1986 (TRA86), the most comprehensive revision of the Internal Revenue Code since 1954, had a major impact. Key provisions of TRA86 broadened the tax base of both individuals and

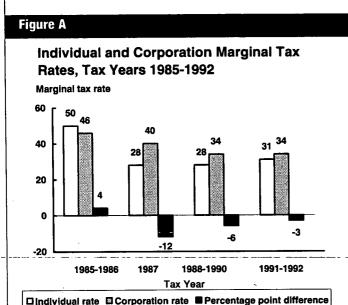

corporations, by curtailing or rescinding many provisions in the tax code which had previously eroded the base, while lowering overall tax rates [15]. Other provisions of TRA86 and other law changes may have also affected organizational structure, including repealing the "general utilities doctrine," tightening the corporation "alternative minimum tax," limiting losses from "passive activities," and repealing the long-term capital gains exclusion. However, the law changes that appear to have had the most significant effect (and are the focus of this article) are the changes in corporate and individual marginal tax rates.

Since business income is taxable either at the corporate or individual level (or both), changes in the individual income tax rates have an effect on the taxation of business income. In addition, changes in the marginal tax rates for individuals or corporations may create incentives to switch from a corporate to either a non-corporate or Subchapter S structure to minimize tax liabilities. Thus, not only is the applicable tax rate schedule (whether corporate or individual) for the entity significant, but so are the tax rates for other organizational forms. For example, in the period after TRA86, the tax rates for both individuals and corporations declined; however, the individual marginal rate reversed its pre-TRA position by becoming the lower of the two. This lower individual tax rate has been cited as the primary reason for the enormous growth in the number of S Corporations in the post-TRA period [16].

The tax rates applicable to corporate and individual taxable income are reflected in the tax computation schedules, usually with higher marginal rates applicable for larger amounts of taxable income. In this article, the top marginal tax rates are assumed to be the applicable tax rate business owners would consider in deciding which form of organization to adopt [17].

Figure A shows the top marginal corporate and individual marginal tax rates during the 1985-1992 period, as well as the difference between the two [18]. Three key inferences which may be drawn from Figure A are that:

■ The top marginal tax rates for both individuals and corporations declined for 1987 as a result of TRA86.

- The individual marginal rate replaced the corporate marginal tax rate as the lower of the two, thereby providing an incentive (after making an allowance for the double taxation of some corporate income) to shift either to an unincorporated or Subchapter S business structure.
- The size of this differential between corporate and individual rates decreased for 1988 and again for 1991, the latter with the initiation of a 31 percent marginal tax rate for individual income. Thus, while the lower individual marginal tax rate continued to provide incentives for conducting business as an entity taxed at the individual level, the magnitude of this differential declined.

As a result of the change in the relative positions of the top corporate and individual marginal tax rates, certain taxable corporations might consider reorganizing as an S Corporation, a partnership, a sole proprietorship, or a Limited Liability Company in the period following TRA86. Considerations other than the marginal tax rate would also enter into this decision-making, however, since each of these organizational types has limitations and restrictions. Nevertheless, after the 1986 reform, a change from taxable corporation status to that of a business that would be taxed at the individual tax rates could have substantially reduced tax liability. Whether or not such a change did occur is a primary focus of the analysis in the next section.

### **Analysis of Business Data**

The data in this article were compiled from SOI annual

cross-sectional studies of corporations (taxable and S Corporations), partnerships, and nonfarm sole proprietorships, for Tax Years 1985-1992. Data from the annual statistical studies are publicly available and are published in a variety of SOI reports [8-11,13]. They represent weighted estimates of U.S. totals by year for each legal form or organizational type. The data base used in this article combines data from these types of organizations for an 8-year period to examine changes in their overall composition.

This section is divided into three parts. First, the size and composition of the business sector is examined in detail for the most recent year for which complete data are available, Tax Year 1992. Next, trends in the data between 1985 and 1992 are examined to ascertain what transpired within this period. Finally, this 8-year period is divided into 4 sub-periods, and changes between the sub-periods are examined. These periods are: the pre-TRA period (1985-1986); the initial year of TRA86 (1987); the subsequent years of TRA86 (1988-1990); and the final years of TRA86 transition and the economic recession (1991-1992).

## The Composition of Financial Activity in 1992

For a first look at the data, summary data on corporations (taxable and S), partnerships, and nonfarm sole proprietorships for Tax Year 1992 are displayed in Figure B. Nonfarm proprietorships accounted for 74 percent of the nearly 21 million entities for 1992, but only 6 percent of business receipts, and 26 percent of net income (less deficit). Corporations, on the other hand, accounted for only 19 percent of the total number of entities, but 90 percent of business receipts, and 67 percent of net income (less deficit).

Figures C and D graphically show this dominance in the number of entities and business receipts for all types of organizations. Clearly, two legal types are predominant -- the large number of relatively small proprietorships and the considerably smaller number of corporations that dominate the financial statistics.

These figures together show several other noteworthy phenomena. S Corporations, although accounting for relatively small portions of the overall financial statistics (14 percent of business receipts and 8 percent of net income (less deficit)), account for over 46 percent of all corporations. Partnerships account for relatively small portions of the overall number of entities (7 percent), business receipts (4 percent), and net income (less deficit) (7 percent). General partnerships are the dominant form of partnerships, both in number of entities and in net income (less deficit). Limited partnerships represent 18

## Figure B

# Number of Entities, Business Receipts, Net Income (Less Deficit), Net Income, and Deficit by Type of Entity, 1992

[All figures are estimates based on samples--numbers of entities are in thousands and money amounts are in billions of dollars.]

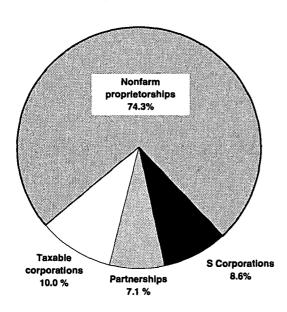

Entity type	Number of entities	Business receipts	Net income (less deficit)	Net income	Deficit
	(1)	(2)	(3)	(4)	(5)
Total	20,849	12,542.3	598.9	865.7	266.8
Corporations	3,869	11,271.6	402.0	570.4	168.4
S Corporations	1,785	1,795.3	46.2	79.6	33.5
Taxable corporations	2,084	9,476.3	355.8	490.8	134.9
Unincorporated businesses	16,980	1,270.7	196.9	295.3	98.4
Partnerships 1	1,485	533.6	42.9	121.8	78.9
Limited partnerships	271	n.a.	-3.3	50.3	39.9
General partnerships		n.a.	46.2	86.1	30.1
Nonfarm sole proprietorships	15,495	737.1	154.0	173.5	19.5

Data are available for Limited Liability Companies only for Tax Year 1993. However, for comparison purposes, there were 17,000 such companies, with \$7.1 billion in business receipts, \$0.3 billion net income (less deficit), \$1.1 billion net income, and \$0.8 billion deficit.

n.a.--not available.

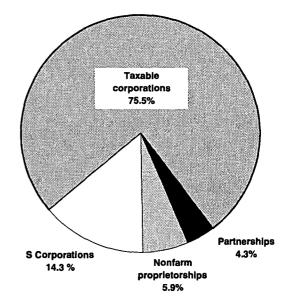

## Figure C

# **Entities by Type, Tax Year 1992**

## Figure D

## Business Receipts by Type of Entity, Tax Year 1992

percent of all partnerships and show an overall loss, as they have annually since the 1970's.

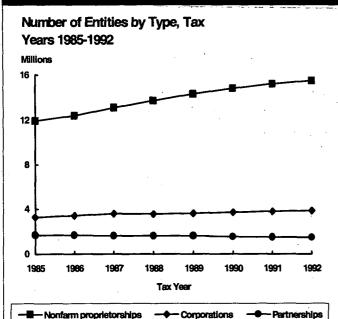

For comparison purposes, Limited Liability Company data are shown in the footnote to Figure B even though these data are for Tax Year 1993, the first year of their availability. Despite the overall interest and anecdotal information on this relatively new "hybrid" organizational type, these organizations are still small in number and in financial activity, accounting for only about 0.1 percent of entities, business receipts, and net income (less deficit).

### Trends in the Number of Businesses

This section focuses on trends in the number of entities and financial data for the various organizational types for the period 1985-1992. These data are presented in Tables 1-4.

Number of entities.— In terms of number of entities, Figure E provides some perspective on the composition by organizational types over time. Nonfarm proprietorships dominate the numbers of entities throughout the 1985–1992 period, and their dominance in numbers appears to

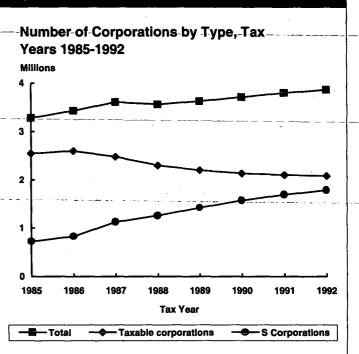

Figure E

be increasing. Corporations are a distant second, followed by partnerships. Growth in the number of corporations was relatively modest for this period. The number of partnerships declined after the passage of TRA86, which is consistent with an anticipated response to the passive loss limitations.

In Figure F, the total number of corporations is shown again along with separate plots of the numbers of S and taxable corporations. Overall, the number of corporations grew very little in this period. However, what happened within the corporate sector is most striking, where changes in the numbers of S Corporations and taxable corporations began with the passage of TRA86. Starting with 1987, the first year for which TRA86 was in effect, the number of S Corporations grew dramatically. For 1987 alone, they increased in number by nearly 37 percent [19]. The

Figure F

number of taxable corporations declined annually since the passage of TRA86, complementing the growth of S Corporations. As a result, the numbers of these two types seem to be converging--for 1992, S Corporations account for 46 percent of all corporations and taxable corporations the remaining 54 percent.

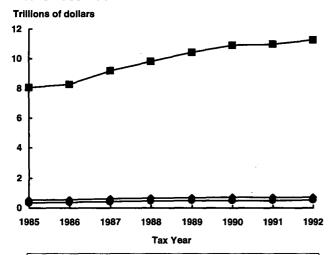

As previously noted, the partnership population declined over this time frame. Somewhat surprisingly, this decline occurred for both general as well as limited partnerships. Since the passive loss limitations of TRA86 were intended to address the losses generated by limited partnerships, their decline in numbers was expected. If anything, it is surprising that they have not declined more rapidly. However, the steady decline in the number of general partnerships was less anticipated, even though many general partnerships are in real estate (the industry group most affected by the passive loss limitations).

General partnerships declined in every year in this period [20]. Why owners seem to be avoiding the partnership organizational form is not clear. Roll-ups, roll-outs, and other "consolidation strategies" may have reduced the numbers, but these have generally been for limited partnerships.

**Business receipts.**-- Data plotted in Figure G for business receipts show a very different picture than trends for the number of entities [21]. Corporations clearly

## Figure G

## Business Receipts by Type of Entity, Tax Years 1985-1992

dominate this measure of gross financial activity. Throughout the 1985-1992 period, corporations accounted for approximately 90 percent of overall business receipts. Partnerships and proprietorships both show small and relatively stable portions of business receipts during this period.

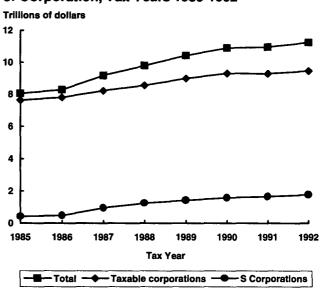

-Corporations

- Partnerships

Corporation business receipts are the focus of Figure H, which displays time series data for taxable, S, as well as total corporations. Despite the enormous growth in the number of S Corporations, taxable corporations still clearly dominate corporate receipts. Not that S Corporation receipts have not grown; they clearly have in this period. However, for 1985, they only accounted for 5 percent of total corporate receipts. Even though S Corporation receipts exhibited substantial growth in the post-TRA period (for example, they more than doubled in 1987 alone), their share of corporate receipts rose only to 16 percent by 1992. This reflects the facts that S Corpora-

# Figure H

# Corporation Business Receipts by Type of Corporation, Tax Years 1985-1992

tions are generally small in size and that taxable corporations include the nation's largest corporations.

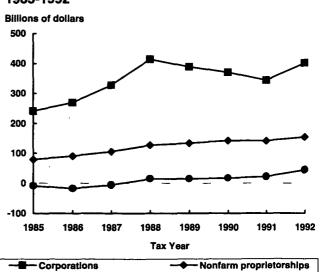

Net income (less deficit).--Profits or net income (less deficit) for all three organizational types are plotted in Figure I [22]. As in the case of business receipts, corpora-

### Figure I

- Nonfarm proprietorships

# Profits by Type of Entity, Tax Years 1985-1992

**Partnerships** 

tions again dominate the statistics on profits (even after allowing for definitional differences), but with two caveats. First, their dominance of profit statistics is not to the same degree as business receipts. For example, for 1992, corporations accounted for 90 percent of business receipts, but only 67 percent of profits. Second, unlike business receipts, corporate profits are volatile and actually declined in 3 of the 4 years since 1988.

Profits of nonfarm proprietorships show modest growth throughout this period, amounting to \$154 billion for 1992 (26 percent of the total). Partnerships, on the other hand, had deficits through 1987, but began a steady stream of (positive) profits thereafter.

Figure J focuses on corporate profits by type of corporation. As expected, taxable corporations very much dominate corporate profits, and, as a result, their pattern of volatility is very much the same as that for all corporations. Although S Corporation profits increased following the passage of the 1986 tax reform, they still are a relatively small component of total corporate profits, accounting for only 11 percent for 1992. Thus, despite an annual growth rate of 26 percent between 1985 and 1992 by S

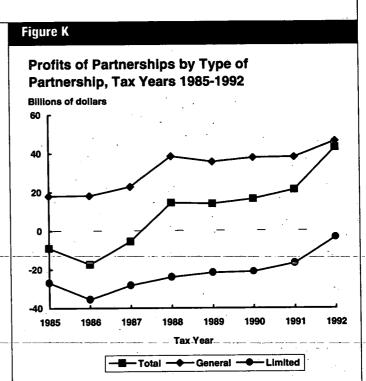

# Profits of Corporations by Type of Corporation, Tax Years 1985-1992 Billions of dollars 500 400 100 1985 1986 1987 1988 1989 1990 1991 1998 Tax Year

Corporations, overall corporate profits are still dominated by those of taxable corporations.

- Taxable corporations

S Corporations

The profits of partnerships, by type of partnership, (Figure K) show similar trends, but at considerably different levels. Limited partnerships had losses for every year,

bottoming out at nearly \$36 billion for 1986, the last pre-TRA year.- However, since that year, losses have steadily declined to only \$3 billion for 1992. General partnerships show a similar pattern of growth throughout the period, however at a much higher level. Unlike limited partnerships that had deep losses for 1985, general partnerships had \$18 billion in net income (less deficit) for 1985 and registered increases in 6 of 7 years thereafter.

### **Growth Rates**

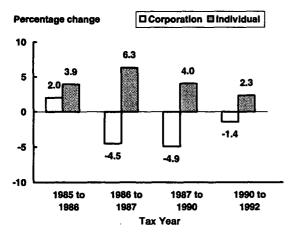

Growth rates were computed from the database to further examine trends in the 1985-1992 period. However, clearer patterns emerge by compiling the data into 4 distinct periods, based on tax law provisions. The periods are: the pre-TRA period (1985 to 1986); the initial year of TRA (1986 to 1987); the subsequent years of TRA (1988 to 1990); and the final years of TRA transition, which were also accompanied by individual tax increases and a recession (1990 to 1992). The percentage changes are "annualized" rates of growth, so that periods of different duration can more readily be compared [23].

Number of entities.--Table 1 shows data and percentage changes for the number of entities for the four periods, which are summarized graphically in Figure L. In the latter, a re-aggregation was made to focus on the effects of taxation. S Corporation data have been combined with partnership and proprietorship data to create an aggregate of entities taxed as individuals. The corporate data that remain are the non-S or taxable corporations.

Figure J

## Figure L

# Annual Percentage Change in Number of Entities by Type of Taxation, Tax Years 1985-1992

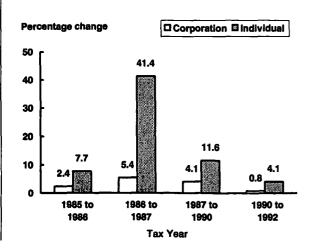

For entities taxed as corporations, a modest 2 percent gain for 1986 was followed by nearly 5 percent annual declines for 1986-1990. This pattern of change is consistent with the shift to S Corporations in the post-TRA period. Conversely, for entities taxed as individuals, nearly 4 percent growth in the pre-TRA period was followed by 6 percent growth for 1987, and declining, though positive, growth rates through 1992. Most of this increase for 1987 was a result of a 37 percent increase for S Corporations, which continued to show strong, albeit declining, rates of growth through 1992.

Business receipts.-- Data and percentage changes for

### Figure M

# Annual Percentage Change in Receipts by Type of Taxation, Tax Years 1985-1992

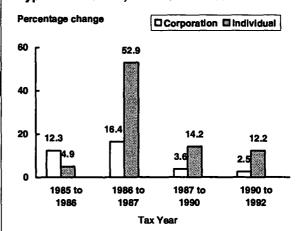

business receipts are shown in Table 2 and summarized in Figure M. These data exhibit some similarities and some differences to data on entity changes. In both instances, the rate of growth for those taxed as corporations was approximately 2 percent for 1986. However, between 1987-1990, differences emerge. The annual declines in growth rates for the number of corporations for the 1987-1990 period were in contrast to the 4 to 5 percent annual increases for corporate business receipts in this period. This is consistent with the earlier findings, which showed that taxable corporations, despite declines in number, still registered steady growth in receipts in the post-TRA period.

In spite of the continued growth of corporation receipts, the receipts of organizations taxed as individuals show substantial growth in all periods, peaking at 41 percent for 1987. Although the receipts of all entities taxed as individuals grew in all periods, S Corporations registered by far the largest increases, more than doubling for 1987, followed by a 17 percent annual rate of increase for 1988-1990.

Net income (less deficit).--Data and year-to-year changes in net income (less deficit) are in Table 3 and a

### Figure N

# Annual Percentage Change in Profits by Type of Taxation, Tax Years 1985-1992

graphical summary of percentage changes appears in Figure N. These data clearly show some of the most pronounced swings. Taxable corporation profits increased in the 12 to 16 percent range from 1985-1987, but their rate of growth declined to 3 to 4 percent after 1987. This is mainly due to the fact that corporate profits declined in 3 of the 4 years since 1988. The profits of entities taxed as individuals increased by nearly 53 percent for 1987

alone and continued to increase at rates between 12 to 14 percent through 1992.

## **Summary and Conclusions**

So what do the time series data and growth rates tell us about the most significant developments in organizational choice dynamics in the 1985-1992 period? Here are some conclusions.

- Businesses taxed as individuals grew substantially in the post-TRA86 period, both in overall numbers and in financial activity. This rate of growth peaked with 1987, the first post-TRA year, but continued even despite the 1991-1992 recession.
- The number of S Corporations accounted for much of the overall increase in the number of businesses and financial activities of businesses taxed as individuals. Their large increase in number for 1987 was partly attributable to conversions from taxable corporations [24].—The growth in the number of S Corporations in the post-TRA period appears to have been primarily at the expense of taxable corporations. This is also consistent with a response to the incentives provided by the marginal tax rate changes.
- Despite declining numbers, taxable corporations still generally increased in terms of receipts and profits, thereby maintaining their dominance of overall business financial activity. This was because many of the businesses that shifted to S Corporation status were relatively small, thereby causing a larger change in the number of businesses than in financial activity.
- Partnerships grew in number until 1986, then declined after the passage of TRA86. This is also consistent with the expected response to the passive loss limitations in TRA86.
- Nonfarm proprietorships exhibited the most stable patterns of growth throughout the period.

The changes in the number of corporations are affected by the increase in the number of consolidated returns filed for affiliated groups [25]. These affiliated groups would have included established companies that formerly filed separate returns whose ownership changed, as well as new companies. The increase in merger activity that occurred in the 1980's would have reduced the number of corporation returns, and, to a lesser extent, reduced the corporate financial data since intra-company transfers among affili-

ates would be netted out in the reported statistics. However, the extent of this latter effect is not clear [26].

The data and analysis in this paper can best be characterized as "the tip of the iceberg," since each study for each year is a statistical compilation of data from literally thousands of tax and information returns. Clearly, additional detail in the time series, such as more financial data, or industry or financial size delineations, would improve the data base [27]. An even further improvement would be to build a multi-year, multi-legal form micro-data base, to include panel studies of identical entities for each legal type and a means to track entity changes. However, all of these exceed the scope of this article. Still, the analysis of trends in the business data can provide a framework for assessing the relative size and changes over time of the various types of entities. For example, the data show a strong correlation between changes in the tax law, particularly the marginal tax rate changes associated with TRA86 and the choice of organizational structure. While this does not demonstrate. causality, it can provide a framework for insight into the underlying dynamics.

In conclusion, this analysis of trends in aggregate statistics indicates there were some substantial changes in the overall structure of U.S. business activity in the 1985-1992 period. The most substantial change was the shift to S Corporations beginning with 1987, the first full year for which the Tax Reform Act of 1986 was in effect, although this was more apparent in the number of businesses than in the financial activity. This shift is consistent with a response by smaller-size corporations to the provisions of TRA86, particularly the relative lowering of the individual marginal tax rates. Also, the fact that this change primarily affected smaller corporations is consistent with the restrictions affecting the size of S Corporations.

### **Data Sources and Limitations**

The data in this paper were compiled from Statistics of Income (SOI) annual studies of corporations, partnerships, and nonfarm sole proprietorships for Tax Years 1985-1992. These data are publicly available and are published in a variety of SOI reports [8-11,13]. They represent weighted estimates of U.S. totals based on samples, by year for each legal form. This data base combines data from these types of organizations for an 8-year period to examine overall changes in their overall composition.

The SOI studies for each of these forms of business are conducted independently and are affected by changes in the Internal Revenue Code, IRS administrative processing, and the tax forms themselves, as well as the effects of

resource constraints and changes in statistical processing methodology. Sometimes these changes result in discontinuities in the time series. While efforts have been made to minimize these discontinuities, several remain, some of which have been mentioned already:

- Proprietorship farms, a major portion of farming businesses, are not included in the data because the annual SOI studies were discontinued after Tax Year 1980 in response to resource constraints.
- It is difficult, if not impossible, to track an individual entity legal change which results in the issuance of a new Employer Identification Number (EIN).
- A significant activity has been made to derive data that are comparable among legal types, particularly for business receipts and net income. Although this often succeeded, some problems remain [28].

The corporate data include all filers of the Form 1120 series, U.S. Corporation Income Tax Return. The data on S Corporations, which have been extracted from Form 1120S, U.S. Income Tax Return for an S Corporation, are also included in the overall corporation data, but have been deducted to compute amounts for corporations other than S Corporations (i.e., taxable corporations).

Data for partnerships have been separated into those for general partnerships and limited partnerships. Partnership data have been aggregated with those for nonfarm sole proprietorships to compute an "unincorporated business total," and the corporate and unincorporated data have been aggregated into a grand total for all businesses.

Although partnership income is subject to tax at the applicable rates of the partners, who can be individuals, corporations, tax-exempt organizations, or virtually any other legal type, most partners are individuals. In this analysis, it is assumed that all partnership income is subject to individual taxation. Partnership data were aggregated with data for nonfarm proprietorships and S Corporations to produce data for entities taxed as individuals.

## **Explanation of Terms**

The analysis in this article is dependent on data that are both consistent over time for one organizational type, as well as consistent between organizational types. Efforts were made to construct time series that were as consistent as possible, even though some inconsistencies remain. This section provides basic definitions of terms used [29].

Number of entities.--This includes the estimated number of active tax or information returns filed by each

legal or form type. For corporations, the numbers represent the number of income tax returns of active corporations, rather than the number of active corporations. The number includes consolidated returns of parent corporations, but not the number of affiliated companies or subsidiaries. The number of partnerships represent the total number of returns of active partnerships that were engaged in a U.S. business or that had income from U.S. sources. Nonfarm proprietorships represent the number of nonfarm sole proprietors, rather than the number of nonfarm businesses owned by sole proprietorships. In all instances, part-year returns are included.

Total and business receipts.--Business receipts include the gross operating receipts of the business. Total receipts include business receipts plus income from investments. In this article, the business receipts of corporations and partnerships classified under finance, insurance, and real estate were made equal to total receipts in recognition of the fact that investment income is often the principal operating income of these businesses, even though such income is reported separately on the tax returns. For sole proprietorships, business receipts were made equal total receipts.

Net income (less deficit).--This amount represents the taxable profit, before income tax, computed under definitions in the Internal Revenue Code. However, because the definitions of receipts and deductions used to compute net income, as well as for conceptual reasons applicable to net income itself, net income (less deficit) is not always defined the same for all legal forms for all years.

- [15] There are many sources that discuss the changes in the tax code resulting from TRA86. See, for example, Joint Committee on Taxation, General Explanation of the Tax Reform Act of 1986; Internal Revenue Service, Explanation of the Tax Reform Act of 1986 for Individuals, Publication 920; and Nelson, Susan and Petska, Tom, "Partnerships, Passive Losses, and Tax Reform," 1989 Proceedings of the American Statistical Association, Section on Survey Research Methods, 1990.
- [16] See sources in footnotes 2-5.
- [17] Ideally, not only should the full tax rate schedules for corporations and individuals be used, but also other provisions, such as the maximum tax rate on capital gains and the alternative minimum tax, should be taken into consideration.
- [18] Advisory Commission on Intergovernmental Relations, Significant Features of Fiscal Federalism, Volume 1, Budget Processes and Tax Systems, Tables 9-10, 1993.
- [19] Beginning with 1987, S Corporations were required to use accounting periods identical to those of their owners. Since owners are mostly individuals with calendar year accounting periods, many S Corporations with other accounting periods had to file two part-year returns in order to convert to calendar year accounting periods and were double counted in the 1987 statistics for the number of S Corporations (there was no such duplication in the financial data, however). This double counting is estimated to have added approximately 100,000 returns to 1987. Taxable corporations also may be understated in the statistics because of an omission of Personal Service Corporations.
- [20] In retrospect, it appears that in processing the 1987 SOI partnership data, too many sampled records were rejected. If an appropriate adjustment were to

- be made, it would involve increasing the overall population estimate by 6,000 to 50,000 returns, which would result in a steady decline in the partner-ship population since 1987.
- [21] One general issue on receipts data is that of "grossing up" business receipts. The multi-year and multitype analysis in this article is dependent on data that are both consistent over time for one organizational type, as well as consistent among organizational types. However, in constructing the annual SOI statistical compilations, insuring such consistency, even within an organizational type, is a challenging, if not impossible, task. Potential changes (and discontinuities) can originate from changes in tax law, changes in tax forms, changes in the IRS master file system, and statistical processing changes. One example of a tax form change is the initiation of a new schedule for certain activities, such as rental income and expenses, which results in the inclusion of only rental net income in the income statement (instead of gross income and expense, separately). Such a change would cause an understatement in "gross" financial activities.
- [22] As with business receipts, efforts were made to construct time series data that were consistent over time. However, some inconsistencies remain. For example, from 1987-1991, net income (less deficit) for S Corporations excludes taxable income (less deficit) from investments. For a more detailed discussion of these issues, see the footnote 2 to Table 1 in [2].
- [23] Annual growth rates for periods of more than 1 year in this article were computed as follows:

$$G_t = (\ln X_t - \ln X_{t-n}) 100 / n$$

where

G<sub>t</sub> = the annual growth rate in the value of X between periods t and n,

- $\ln X_t$  = the natural logarithm of the value of X for period t,
- ln X<sub>t-n</sub> = the natural logarithm of the value of X for period t-n, and
  - n = the number of years on which the computation is based.
- [24] See footnote 19.
- [25] See source in footnote 2 for a discussion of the potential affects of mergers and consolidation.
- [26] Ibid.
- [27] A logical extension would be to add industrial detail to this analysis, particularly in such cases where certain industries show substantial differences. One such example is for real estate partnerships. While many of these losses are from limited partnerships, use of the industry delineation would probably have been more effective.
- [28] Deriving consistent aggregates was made considerably more difficult beginning with 1987, when "portfolio income" distributed directly to partners and net income or loss from partnership rental and other real estate activities were excluded from net income (less deficit) on the Form 1065, U.S. Partnership Return of Income. However, efforts were made to recoup these income types to preserve a consistent time series. For S Corporations, a similar circumstance exists, but a similar adjustment was not made for the 1987-1991 data on net income (less deficit), so they are understated by the amounts of these types of income. In addition, since the taxable corporation data were computed by subtracting the S Corporation data from the corporation total, the taxable corporation data are consequently overstated by these amounts.
- [29] For additional information, see the source in the "Notes and References" section, particularly notes to Table 1 in the article cited in footnote 2.

## Corporate Foreign Tax Credit, 1992: An Industry and Geographic Focus

On pages 115 and 116:

Footnote 4, Table 1 (explained in the footnote section on page 129) should have been appended to the column 5 heading ("Dividends received from IC-DISC's or former DISC's"). It was inadvertently omitted.

On pages 118, 132, 134, 135, 138, 142, 144, and 146:

Please note that certain cells in Table 1 (column 13), Table 2 (columns 14, 19, 24, and 35), and Table 3 (columns 6, 10, 11, and 18), which showed neither data nor dashes as published, should contain dashes (--), indicating that these cells contained no returns with the specific characteristic.

On pages 130-139:

Wherever certain cells in Table 2, column 1 ("Number of returns") contain triple asterisks (\*\*\*) to indicate

that data have been suppressed to avoid disclosure of information about specific corporations, then, according to the convention used for Statistics of Income, the entire line of data cells containing dollar amounts associated with these returns should also have been suppressed and triple asterisks shown instead, even if some of these cells might otherwise have contained dashes (--) indicating there were no returns with the specific characteristic (or contained a footnote indicating there was an amount "under \$500"). Therefore, it is possible for a total for a specific characteristic to have been suppressed in the table, but for some of the cells presenting detail beneath that total to show data in the absence of a disclosure problem. (If dollar amounts associated with a suppressed frequency for the number of returns are inadvertently shown in the table as published, such amounts should be disregarded.)

On page 132 in column 9, under "Agriculture, forestry, and fishing," the triple asterisk (\*\*\*) for "High withholding tax interest" should be replaced with dashes (--) indicating that there was no such interest reported by corporations classified in this industrial division.

An asterisk (\*) indicating the estimate is subject to high sampling variability, as published, appears in each cell on the total line under "Agriculture, forestry, and fishing." For this same industrial division, an asterisk should also appear in each cell on the line described as for "All other income from outside the United States."

There should have been a footnote attached to all totals in Table 2, column 1 ("Number of returns") to explain that the detail beneath such totals is not additive because some corporations report more than one type of income.

Because of the inadvertent omission at the end of Table 2 of the explanatory "Notes" paralleling those presented for Table 1 on page 129, those for Table 1 can be used for Table 2, making allowance though for differences in the column heading references cited in the Table 1 notes.

### On pages 140-151:

Data shown in Table 3 under "European Economic Community, total," for "West Germany" are, in fact, for "Germany," as a whole. (Therefore, even though "East Germany" appears as a separate title under "Eastern European countries, total," no data are shown for East Germany.)

- be made, it would involve increasing the overall population estimate by 6,000 to 50,000 returns, which would result in a steady decline in the partnership population since 1987.
- [21] One general issue on receipts data is that of "grossing up" business receipts. The multi-year and multitype analysis in this article is dependent on data that are both consistent over time for one organizational type, as well as consistent among organizational types. However, in constructing the annual SOI statistical compilations, insuring such consistency, even within an organizational type, is a challenging, if not impossible, task. Potential changes (and discontinuities) can originate from changes in tax law, changes in tax forms, changes in the IRS master file system, and statistical processing changes. One example of a tax form change is the initiation of a new schedule for certain activities, such as rental income and expenses, which results in the inclusion of only rental net income in the income statement (instead of gross income and expense, separately). Such a change would cause an understatement in "gross" financial activities.
- [22] As with business receipts, efforts were made to construct time series data that were consistent over time. However, some inconsistencies remain. For example, from 1987-1991, net income (less deficit) for S Corporations excludes taxable income (less deficit) from investments. For a more detailed discussion of these issues, see the footnote 2 to Table 1 in [2].
- [23] Annual growth rates for periods of more than 1 year in this article were computed as follows:

$$G_t = (\ln X_t - \ln X_{t-n}) 100 / n$$

where

G<sub>t</sub> = the annual growth rate in the value of X between periods t and n,

- ln X<sub>t</sub> = the natural logarithm of the value of X for period t,
- ln X<sub>t-n</sub>= the natural logarithm of the value of X for period t-n, and
  - n = the number of years on which the computation is based.
- [24] See footnote 19.
- [25] See source in footnote 2 for a discussion of the potential affects of mergers and consolidation.
- [26] Ibid.
- [27] A logical extension would be to add industrial detail to this analysis, particularly in such cases where certain industries show substantial differences. One such example is for real estate partnerships. While many of these losses are from limited partnerships, use of the industry delineation would probably have been more effective.
- [28] Deriving consistent aggregates was made considerably more difficult beginning with 1987, when "portfolio income" distributed directly to partners and net income or loss from partnership rental and other real estate activities were excluded from net income (less deficit) on the Form 1065, U.S. Partnership Return of Income. However, efforts were made to recoup these income types to preserve a consistent time series. For S Corporations, a similar circumstance exists, but a similar adjustment was not made for the 1987-1991 data on net income (less deficit), so they are understated by the amounts of these types of income. In addition, since the taxable corporation data were computed by subtracting the S Corporation data from the corporation total, the taxable corporation data are consequently overstated by these amounts.
- [29] For additional information, see the source in the "Notes and References" section, particularly notes to Table 1 in the article cited in footnote 2.

### High-Income Tax Returns for 1992

On page 48:

Figure B is partially reproduced to correct the percentage of all returns for Tax Year 1991 with adjusted gross income of \$200,000 or more (in current dollars) that showed no "worldwide income tax" liability (column 7).

#### Corporate Foreign Tax Credit, 1992: An Industry and Geographic Focus

On pages 115 and 116:

Footnote 4, Table 1 (explained in the footnote section on page 129) should have been appended to the column 5 heading ("Dividends received from IC-DISC's or former DISC's"). It was inadvertently omitted.

On pages 118, 132, 134, 135, 138, 142, 144, and 146:

Please note that certain cells in Table 1 (column 13), Table 2 (columns 14, 19, 24, and 35), and Table 3 (columns 6, 10, 11, and 18), which showed neither data nor dashes as published, should contain dashes (--), indicating that these cells contained no returns with the specific characteristic.

On pages 130-139:

Wherever certain cells in Table 2, column 1 ("Number of returns") contain triple asterisks (\*\*\*) to indicate

#### Revisions to the Winter 1995-1996 Issue

that data have been suppressed to avoid disclosure of information about specific corporations, then, according to the convention used for Statistics of Income, the entire line of data cells containing dollar amounts associated with these returns should also have been suppressed and triple asterisks shown instead, even if some of these cells might otherwise have contained dashes (--) indicating there were no returns with the specific characteristic (or contained a footnote indicating there was an amount "under \$500"). Therefore, it is possible for a total for a specific characteristic to have been suppressed in the table, but for some of the cells presenting detail beneath that total to show data in the absence of a disclosure problem. (If dollar amounts associated with a suppressed frequency for the number of returns are inadvertently shown in the table as published, such amounts should be disregarded.)

On page 132 in column 9, under "Agriculture, forestry, and fishing," the triple asterisk (\*\*\*) for "High withholding tax interest" should be replaced with dashes (--) indicating that there was no such interest reported by corporations classified in this industrial division.

An asterisk (\*) indicating the estimate is subject to high sampling variability, as published, appears in each cell on the total line under "Agriculture, forestry, and fishing." For this same industrial division, an asterisk should also appear in each cell on the line described as for "All other income from outside the United States."

There should have been a footnote attached to all totals in Table 2, column 1 ("Number of returns") to explain that the detail beneath such totals is not additive because some corporations report more than one type of income.

Because of the inadvertent omission at the end of Table 2 of the explanatory "Notes" paralleling those presented for Table 1 on page 129, those for Table 1 can be used for Table 2, making allowance though for differences in the column heading references cited in the Table 1 notes.

#### On pages 140-151: -

Data shown in Table 3 under "European Economic Community, total," for "West Germany" are, in fact, for "Germany," as a whole. (Therefore, even though "East Germany" appears as a separate title under "Eastern European countries, total," no data are shown for East Germany.)

# **General notations and statement**

N/A - Not applicable.

n.a. - Not available.

p - Preliminary.

r - Revised.

- \* Estimate should be used with caution because of the small number of sample returns on which it is based. See "Appendix—SOI Sampling Methodology and Data Limitations."
- \*\* Not shown to avoid disclosure of information about specific taxpayers. However, the data are included in the appropriate totals.

Detail may not add to totals because of rounding.

# Table 1

- [1] Forms 1040, 1040A, and 1040EZ include "standard" electronically-filed (ELF) returns starting with 1985, and returns filed electronically by telephone ("Telefile") starting with 1991. For 1992 and 1993, includes computer-generated "paper" returns (Form 1040PC) that were reclassified as Form 1040, 1040A, or 1040EZ returns for Statistics of Income, depending on the filing characteristics of each return. Starting with 1994, Form 1040PC returns are shown separately and were not reclassified. Therefore, 1994 data for Forms 1040, 1040A, and 1040EZ are not comparable with previous years.
- [2] Less deficit. Starting with 1987, data are not comparable with earlier years because of major changes in the law, many of which are referred to in other footnotes.
- [3] Not included in AGI.
- [4] Starting with 1987, represents total dividends; previously, represented total dividends after statutory exclusion.
- [5] Starting with 1987, losses are after "passive loss" limitation.
- [6] Starting with 1987, represents total capital gains; previously, represented total capital gains after statutory exclusion. For other changes affecting capital gains, see Statistics of Income—Individual Income Tax Returns, various years.
- [7] Before 1980 and starting again after 1987, excludes Individual Retirement Arrangement (IRA) distribu-

- tions; for intervening years, pensions and IRA distributions in AGI were reported together on the tax return. Effective during 1986, the more liberal of the two methods of computing the nontaxable portion of pensions and annuities (representing taxpayer contributions to certain pension plans) was repealed.
- [8] Starting with 1987, represents total unemployment compensation; previously, all or part was excludable under certain conditions.
- [9] Starting with 1994, up to 85 percent of social security benefits were taxable; previously, the maximum percentage was 50.
- [10] Excludes sole proprietorship (including farm) rental income or loss. Starting with 1987, rental losses are before "passive loss" limitation and, therefore, exceed the amount included in AGI.
- [11] Excludes certain royalties included in computations of capital gain or loss and of ordinary gain or loss, sales of noncapital assets.
- [12] Prior to 1981, amounts for net income are actually for net income (less loss). Net income and loss were not separately tabulated. Also, for these years, the number of returns shown with net income was rounded to millions during processing; the more exact number was not tabulated.
- [13] See footnote 5.
- [14] See footnote 12.
- [15] See footnote 5.
- [16] Includes adjustments not shown separately in this table. Starting with 1987, excludes certain business-related expenses, deduction for two-earner married couples, and certain alimony payments, but includes self-employed health insurance deduction; see also footnotes 17 and 18. Also, for 1987-1993, excludes employee moving expenses (see footnote 22). Starting with 1990, adjustments include deduction for one-half of self-employment (social security) tax. For changes in adjustments for earlier years, see Statistics of Income—Individual Income Tax Returns.
- [17] Deductible Individual Retirement Arrangement (IRA) contributions, reflected in adjustment statistics starting with 1980, were limited starting with 1987.
- [18] Deduction expired during 1992 and 1994, but was later reinstated retroactively for each of these years.

- Data for 1992 and 1994 are, therefore, understated because they exclude amounts subsequently claimed on amended returns.
- [19] Includes exemptions for blindness repealed effective 1987. Deduction for exemptions was limited for higher-income taxpayers starting with 1991. Exemption amounts were indexed for inflation starting with 1985 and were limited for certain high-income taxpayers starting with 1987.
- [20] In general, represents the sum of standard and itemized deductions. For 1980 and 1985 data, includes total itemized deductions before subtraction of "zero bracket amount," plus, for non-itemized deduction returns, the zero bracket amount and, for 1985 data only, charitable contributions deduction. Starting with 1987, includes revised itemized deductions (see also footnotes 22-24), "basic" standard deduction and "additional" standard deductions for age 65 or over or for blindness (for changes in the standard deduction and its relation to the zero bracket amount, see *Statistics of Income—Individual Income Tax Returns*, for appropriate years). Starting with 1991, total itemized deductions are after statutory limitation (see footnote 22).
- [21] For 1980 and 1985 data, represents "zero bracket amount" used on returns of non-itemizers; see also footnote 26. Zero bracket amount for 1985 and standard deduction, starting with 1986, were indexed for inflation.
- [22] Includes itemized deductions not shown separately in this table, including revised deductions, starting with 1987, for "miscellaneous expenses" after limitation and for employee moving expenses; see also footnotes 23 and 24. For the most part, moving expenses are excluded after 1993 (see also footnote 15). In general, total itemized deductions were limited for certain high-income taxpayers starting with 1991. For changes in deductions for earlier years, see Statistics of Income—Individual Income Tax Returns.
- [23] Deductible medical and dental expenses were limited, starting with 1987, based on a revised percentage of AGI. For changes in the deduction for 1987 and earlier years, see Statistics of Income—Individual Income Tax Returns.
- [24] Starting with 1987, State sales taxes were no longer deductible.

- [25] Starting with 1987, deductions for "personal" interest and mortgage real estate loan interest were limited and, starting with 1991, personal interest was no longer deductible.
- [26] For 1980 and 1985 data, taxable income includes the "zero bracket amount," repealed effective 1987 and partially replaced by standard deductions which were subtracted in computing taxable income. A standard deduction was similarly used prior to 1980. For the percentages of AGI used for the standard deduction and the limitation on the deduction, see Statistics of Income—Individual Income Tax Returns.
- [27] Different tax rate structures applied to Tax Years 1970, 1971-1978, 1979-1981, 1982-1986, 1987, 1988-1990, 1991-1992, and 1993-1994. Indexing of tax rate boundaries for inflation was introduced starting with 1985. The preferential maximum tax rate on net long-term capital gains under "alternative tax" was revised over the years. Alternative tax was abolished effective 1987, but a maximum capital gains tax rate less than the maximum regular tax rate continued to apply under certain conditions starting with 1991. For additional information on changes affecting tax computations, see Statistics of Income—Individual Income Tax Returns.
- [28] Includes that portion of the earned income credit used to offset income tax before credits; see also footnote 33. Earned income credit is shown in Table 2.
- [29] Includes credits not shown separately in this table, such as the political contributions credit (repealed effective 1987), earned income credit (liberalized starting with 1987, 1991, and 1994), and low-income housing credit (introduced effective 1987); see also footnote 30. For changes in credits allowed for earlier years, see Statistics of Income—Individual Income Tax Returns.
- [30] Investment credit was included in the more-inclusive general business tax credit starting with 1984. With exceptions, investment credit was repealed effective 1986.
- [31] Includes income tax after credits and additional tax for tax preferences, i.e, "minimum tax" or "alternative minimum tax" (see footnote 32).
- [32] The add-on "minimum tax" on "tax preferences" (chief among which were net long-term capital gains) was introduced starting with 1970. (This tax was formerly described in Statistics of Income as the

"additional tax for tax preferences.") The minimum tax computation, using a base related to taxable income, was revised and the tax rate increased effective 1976. The number of preferences subject to tax was revised effective 1976 and 1981. Starting with 1979, two major preferences formerly subject to minimum tax (including net long-term capital gains) were subjected, instead, to the new "alternative minimum tax," which required taxpayers to pay the larger of the regular income tax or the AMT. Computation of AMT was revised effective 1980 (to allow tax to be reduced by certain credits) and. again, effective 1981 (to modify the graduated tax rate structure). Minimum tax was abolished effective 1983 and many of the tax preferences subject to this tax were subjected, instead, to a revised AMT. AMT was increased starting with 1983 by introduction of a single, higher tax rate which replaced two, lower graduated rates. The single rate was increased effective 1987 and 1991; two, higher graduated rates were introduced effective 1993.

- [33] Includes refunds and credits to the following year's estimated tax and refundable portion of earned income credit. Reflects overpayments of income tax, tax recapture of certain prior-year tax credits, tax applicable to Individual Retirement Arrangements (IRA's), self-employment (social security) tax, social security tax on certain tip income, and certain other income-related taxes (for the taxes applicable to the years shown, see Statistics of Income—Individual Income Tax Returns).
- [34] Reflects taxes mentioned in footnote 33.

SOURCE: Statistics of Income—Individual Income Tax Returns, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# Table 2

- [1] Includes returns with adjusted gross deficit.
- [2] U.S. totals in Table 2 do not agree with Tables 1 and 3 mostly because Table 2 also includes (a) "substitutes for returns," whereby the Internal Revenue Service constructs returns for certain known nonfilers on the basis of available information and imposes an income tax on the resulting estimate of "taxable income," and (b) returns of nonresident or departing aliens. In addition, for purposes of Table 2:

- a. "Number of exemptions" also includes responses of taxpayers who checked the boxes on their tax return for age 65 or over or for blindness in order to claim the additional standard deductions for age or blindness. This treatment enables some comparability to be maintained between State data starting with 1987 and data for years prior to 1987. Number of exemptions is still understated, however, because these boxes are not checked if taxpayers itemize deductions. (Prior to 1987, checking these boxes entitled taxpayers to additional personal exemptions.)
- b. "Itemized deductions" includes any amounts reported by the taxpayer, even if they were not used in computing taxable income, e.g., amounts reported on returns with no adjusted gross income. See also footnote 22, Table 1.
- c. "Total tax liability" includes income tax after credits, alternative minimum tax, tax recapture of prior-year investment or low-income housing credits, tax applicable to Individual Retirement Arrangements (IRA's), self-employment (social security) tax, social security tax on certain tip income, and certain other income-related taxes. Total tax liability is before reduction by earned income credit (see footnotes 2(d) and 4, below).
- d. "Earned income credit," liberalized starting with 1994, includes both the refundable and nonrefundable portions. The nonrefundable portion could reduce income tax and certain related taxes to zero. See also footnote 4.
- [3] Excludes those farm returns which also included a non-farm sole proprietorship business schedule (s).

  These returns are included in the statistics for the "number of sole proprietorship returns."
- [4] "Excess earned income credit" represents the refundable portion of the credit (see footnote 2(d)) and equals the amount in excess of total tax liability (defined in footnote 2(c)), including any advance earned income credit payments for those returns which had such an excess.
- [5] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside of Puerto Rico or with income earned as U.S. Government employees.

NOTE: This table presents aggregates of *all* returns filed and processed through the Individual Master File (IMF) system during Calendar Year 1995. In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in Table 2 should therefore be used with the knowledge that some of the data have not been perfected or edited for statistical purposes and that U.S. totals in this table may not be altogether comparable to the U.S. totals in Tables 1 and 3, as a result.

SOURCE: Internal Revenue Service, Corporate Systems Division, Individual Systems Branch.

# Table 3

- [1] In addition to low-income taxpayers, this size class (and others) includes taxpayers with "tax preferences," not reflected in adjusted gross income or taxable income, which are subject to the "alternative minimum tax" (included in "total income tax"), defined in footnote 32, Table 1.
- [2] AGI minus "total deductions, personal exemptions" will not equal "taxable income" because the total of deductions and exemptions could exceed AGI and therefore includes amounts that could not be used in computing taxable income.
- [3] Tax includes income tax after credits and the alternative minimum tax (see footnote 1).
- [4] Not computed.

SOURCE: Statistics of Income—Individual Income Tax Returns, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# Table 4

[1] Represents "income" from owner-occupied nonfarm housing (less actual rental income and subsidies); proprietors' income; services to individuals furnished without payment by financial intermediaries (except life insurance carriers and private non-insured pension plans); employment-related food to employees, including that related to military and domestic

- service; standard military clothing issued to military personnel; and employees' lodging. Excludes employer-paid health and life insurance premiums.
- [2] Represents imputed interest received by persons from life insurance carriers and private non-insured pension plans.
- [3] Starting with 1990, the procedure for estimating the difference between NIPA and IRS treatment of depreciation was revised. Therefore, the data for years before 1990 are not comparable to data for later years.
- [4] Represents income of low-income individuals not required to file individual income tax returns, unreported income, and statistical errors or omissions and effects of errors in data for adjusted gross income or personal income.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, Volume 1, 1929-58,* 1993, and revised *Volume 2, 1959-92,* (in preparation); for years after 1992, *Survey of Current Business,* various issues. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# **Tables 5 and 6**

- [1] See Table 4 for the differences between personal income and adjusted gross income.
- [2] Beginning with 1987, data are not comparable with earlier years because of major changes in the definition of adjusted gross income.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, *The National Income and Product Accounts of the United States, 1929-58, Volume 1, 1993, and revised Volume 2, 1959-92* (in preparation); for years after 1992, *Survey of Current Business*, various issues. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# Table 7

[1] Returns with standard deduction, starting with 1955, include a small number with no adjusted gross

income and no deductions. (For 1977-1986, standard deduction is the "zero bracket amount," which was also reported on a small number of returns included in the 1987-1988 statistics; see footnote 2.) For 1944-1954, returns with no adjusted gross incomeare included in the number of returns with itemized deductions.

- [2] Amount of standard deduction for 1944-1957 was estimated by Joseph A. Pechman, The Brookings Institution, on the basis of the distribution of the number of returns by income class and marital status in Statistics of Income—Individual Income Tax Returns, and, starting with 1958, was obtained directly from Statistics of Income tabulations for these years. Represents "zero bracket amount" for 1977-1986. Starting with 1987, represents the sum of "basic" and "additional" standard deductions (for age 65 or over and for blindness); also includes zero bracket amount reported on the small number of prior-year returns filed in 1988-1989 that were included in the 1987-1988 statistics.
- [3] For 1977-1986, total itemized deductions are before subtraction of the "zero bracket amount." Starting with-1991, total itemized deductions are after statutory limitation (see footnote 22, Table 1).
- [4] Sum of standard and itemized deductions, plus charitable deduction reported on standard deduction returns for Tax Years 1982-1986. For 1987-1988, total deductions also include "zero bracket amount" reported on a small number of returns (see footnote 2). Includes total deductions that could not be used because they exceeded AGI
- [5] See footnote 2, Tables 5 and 6.

SOURCE: Except as indicated in footnote 1, Statistics of Income—Individual Income Tax Returns, and unpublished tables, appropriate years. Data are subject to sampling error. Tax law and form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# **Table 8**

- [1] See Table 4 for the differences between personal income and adjusted gross income.
- [2] Excludes the "zero bracket amount" for 1977-1986. Because of major changes in law, taxable income starting with 1955 and 1987 is not comparable with

earlier years. See also footnote 26, Table 1.

[3] For the definition of total income tax, see footnote 31, Table 1.

SOURCE: U.S. Department of Commerce, Bureau of Economic Analysis, The National Income and Product Accounts of the United States, Volume 1, 1929-58, 1993, and revised Volume 2, 1959-92, (in preparation); for years after 1992, Survey of Current Business, various issues; and Statistics of Income—Individual Income Tax Returns, appropriate years. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# Table 9

[1] Starting with 1975, includes refundable portion of the earned income credit.

SOURCE: Statistics of Income—Individual Income Tax Returns, and unpublished tables, appropriate years. Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# Table 10

- [1] For 1980, represents number of businesses (up to a maximum of three per return). For other years, represents the number of returns, even if there were more than one business per return.
- [2] Total deductions include amounts not shown separately in this table, as well as amounts not reported separately on Schedule C-EZ (short form) used by certain of the smaller businesses starting with 1992. Most deductions for which statistics are shown are slightly understated to the extent that only total deductions had to be reported on Schedule C-EZ. After 1986, total deductions exclude disallowed "passive losses"; but net income (less deficit), net income, and deficit reflect these losses. In addition, net income (less deficit), net income, and deficit are after adjustment for the passive loss carryover from prior years. Therefore, business receipts minus total deductions do not equal net income (less deficit).

SOURCE: Statistics of Income—Sole Proprietorship

Returns, appropriate years, and Statistics of Income Bulletin, Summer issues (for most years). Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# Table 11

- [1] Includes assets and liabilities not shown separately.

  Totals are somewhat understated because not all partnership returns included a complete balance sheet.

  In addition, after 1990 certain small partnerships were not required to file balance sheets.
- [2] Short-term debt is the abbreviated title for mortgages, notes, and bonds payable in less than 1 year.
- [3] Long-term debt is the abbreviated title for mortgages, notes, and bonds payable in 1 year or more.
- [4] "Total receipts" and "total deductions" include amounts not shown separately. Prior to 1981, "total receipts" included gross income from farming, rents, and royalties. Expenses related to this income were included under "total deductions." Starting with 1981, only the net incomes or deficits from farming, rents, and royalties were tabulated; the positive amounts were included under "total receipts" and the negative amounts under "total deductions." The related expenses were not tabulated. Because of a redesign of the partnership return, starting with 1987, total receipts was computed for the statistics as the sum of "total income from a trade or business;" and the following income distributed directly to partners: "ordinary" gain from sales of property other than "capital assets;" "ordinary" income from estates, trusts, and other partnerships; "portfolio income," comprising interest, dividends, royalties, and other (excluding net capital gains), and rental real estate income (positive amounts only); income from other rental activities (positive amounts only). Most, but not all, of these types of income were included in receipts data for 1986 and earlier years.

Total deductions was computed as the sum of "cost of sales and operations," "total deductions from a trade or business", and the following, which were allocated directly to partners: "ordinary" loss from sales of property other than "capital assets"; "ordinary" loss from estates, trusts, and other partnerships; rental real estate losses; other rental losses; and "portfolio losses" (excluding net capital losses). Portfolio income and loss from sales of "capital assets" was intentionally omitted from receipts and

- deductions to improve comparability with earlier years.
- [5] In finance, insurance, and real estate prior to 1981, only gross rentals reported as investment income were treated as business receipts, but only if they were the principal operating income.
- [6] Taxable interest only. For the 1985 statistics, also includes certain dividends reported in combination with taxable interest.
- [7] After 1980, represents the more complete amounts reported in depreciation computation schedules, rather than the amounts reported as the depreciation deduction (augmented by depreciation identified for the statistics in cost of sales and operations schedules).

SOURCE: Statistics of Income—Partnership Returns, appropriate years, and Statistics of Income Bulletin,
Summer or Fall issues (for most years). Data are subject to sampling error. Tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# Table 12

- [1] Size classes are based on "business receipts," i.e., gross amounts from sales and operations, for industries except those in finance, insurance, and real estate. For the latter industries, "total receipts," which is the sum of business receipts and investment income, was used. For partnerships, comparability of data by size of receipts is affected by revisions to the definition of receipts; see also footnotes 4 and 5, Table 11. To help minimize the break in comparability caused by the change in statistical treatment of partnership farm and rental income, an effort was made for 1981-1987 only, to include rental (though not farm) gross income in the receipts used for the size distribution in Table 12. Starting with 1988 though, only partnership net rentals are reflected in the size distribution.
- [2] Includes returns with no business receipts.
- [3] Includes corporations and partnerships with zero assets and liabilities. In addition, for partnerships, includes partnerships without balance sheet information (see also footnote 1, Table 11).
- [4] See footnote 1, Table 10. Table 10.

SOURCE: Statistics of Income—Corporation Income Tax Returns; Statistics of Income—Partnership Returns, Sole

Proprietorship Returns, and Business Income Tax Returns, depending on the year; and Statistics of Income Bulletin, Summer or Fall issues (for most years). Tax law and tax form changes affect the year-to-year comparability of the data. See the appropriate Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# Table 13

- [1] Starting with 1985, "number of returns" excludes taxable cooperatives; starting with 1987, Real Estate Mortgage Investment Conduits (REMIC's); and starting with 1988, Foreign Sales Corporations (FSC's) and Interest-Charge Domestic International Sales Corporations (IC-DISC's); see also footnotes 5 and 6, below. Because of the omission of these returns, totals for all income and financial items shown in the statistics (except those not applicable to IC-DISC's and FSC's, such as "income subject to tax," "income tax," and tax credits) are slightly understated. (There were 980 IC-DISC returns for 1991; see "Interest-Charge Domestic International Sales Corporations, 1991," Statistics of Income Bulletin, Summer 1995, Volume 15, Number 1.) A change in the definition of S Corporation net income starting with 1987 means that totals for receipts and deductions are slightly understated to the extent that they were not directly related to the "trade or business incomereported by these companies.." Comparability of data for returns with net income is also affected by this same change, as well as by a change in the definition of regulated investment company net income for certain years; for additional information about these changes in the definition of net income, see footnote 16.
- [2] Consolidated returns were filed on an elective basis for groups of affiliated corporations (with exceptions), in general, if 80 percent or more of the stock of the affiliates was owned within the group and a common parent corporation owned at least 80 percent of the stock of at least one of the affiliates.
- [3] Included in "number of returns, total" and "number with net income."
- [4] In general, certain small, closely-held corporations that elected to be taxed at the shareholder level, with no more than 35 shareholders (25 for 1982; 15 for 1979-1981; 10 or 15 for 1977-1978, depending on conditions contained in the law; and 10 for earlier years).

- [5] Domestic International Sales Corporations (DISC's) were designed to promote U.S. exports. They were taxed through parent corporations, but only when profits were distributed or deemed distributed to them. This system of tax deferral was generally replaced after 1984 with a new system of Foreign Sales Corporations (FSC's); see footnote 6. Tax benefits of DISC's remaining after 1984 were limited and an interest charge for tax-deferred amounts was imposed on the parent shareholders, whose DISC subsidiaries were unable to meet the FSC requirements and that elected to continue as IC-DISC's.
- [6] Foreign Sales Corporations (FSC's) generally replaced DISC's as a means of promoting U.S. exports (see footnote 5). Under the FSC provisions, a portion of these subsidiaries' "foreign trade income" was exempt from U.S. income tax.
- [7] Starting with 1985, inventories includes amounts
   reported by real estate subdividers and developers previously included in "other investments."
- [8] For 1980 and 1985 data, tax-exempt securities, representing investments in State and local Government obligations, were reported with investments in U.S. Government obligations as a combined total on the tax return. After 1988, tax-exempt securities were again reported separately on the tax return, but were redefined to include, not only investments in State and local Government obligations, but also stock in investment companies that distributed dividends during the current year representing tax-exempt interest on such obligations.
- [9] After 1990, accounts payable of banking and savings and loan institutions includes deposits and withdrawable shares previously reported in "other current liabilities."
- [10] In general, after 1982, Statisticsof income data for receipts, deductions, and net income (or deficit) of S Corporations are limited to those attributable to a trade or business. Therefore, most investment income or loss, such as from taxable interest, dividends, rents, royalties, and gain (loss) from sales of investment property; the deductions related to this income; as well as deductions for charitable contributions, intangible drilling and development costs, oil and gas depletion, foreign taxes paid, and the limited expensing of the cost of depreciable assets (Code section 179), are not reflected in net income (because they were allocated directly to shareholders, instead). See also footnote 11.

- After 1991, "cost of sales and operations" exclude amounts previously estimated for the statistics from other information reported (often in "other deductions") on the tax returns of corporations reporting "business receipts," without a corresponding cost of sales and operations. Most of these corporations were classified either in transportation and public utilities or in services.
- [11] After 1986, "business receipts" includes the full amount reported by stock and commodity brokers and exchanges, and by real estate subdividers, developers and operative builders, even when they bought and sold securities, commodities and real estate on their own account. Previously, such transactions were treated as "net gain (loss), non-capital assets."
- [12] See footnote 10.
- [13] Starting with the 1985 statistics, includes any dividends reported in combination with interest on Form 1120-S by S Corporations, i.e., certain corporations that elect to be taxed through shareholders (see footnote 4). Based on prior years when Form 1120-S required each to be reported separately, nearly all of the combined amount represents interest.
- [14] For the 1985 statistics, "other deductions" includes depletion and employer contributions to pension, profit-sharing, stock bonus, and annuity plans, and to employee benefit programs, reported on the Form 1120-A short form. After 1987, identifiable amounts reported on Form 1120-A for any of these items are included in the statistics for the appropriate deduction. For the 1985 statistics, "other deductions" include depletion and employer contributions to pension, profit-sharing, stock bonus, and annuity plans, reported on the Form 1120-A short form. After 1987, identifiable amounts reported on Form 1120-A for any of these items are included in the statistics for the appropriate deduction. Starting with 1992, "other deductions" include certain amounts previously treated as part of the cost of sales and operations for Statistics of Income. See also footnote 10.
- [15] In general, "total receipts less total deductions" includes nontaxable interest on State and local Government obligations, but excludes income from related foreign corporations only "constructively" received. As such, "total receipts less total deductions" represents all income, taxable and nontaxable,

- "actually" received by the corporation, as reported on the corporation income tax return, and excludes all income only "constructively" received. In contrast, "net income (less deficit)" represents all taxable income, actually or constructively received. Therefore, in the statistics, "total receipts less total deductions" minus "nontaxable interest on State and local Government obligations" and "constructive taxable income from related foreign corporations" equals "net income (less deficit)." For the exception, due to regulated investment companies, see footnote 16.
- [16] "Net income (less deficit)," "net income," and "deficit" shown for 1991-1993 exclude: (a) net longterm capital gain reduced by net short-term capital loss reported by regulated investment companies (see also footnote 15), and (b) amounts other than "from a trade or business" reported by S Corporations (see also footnote 4). For comparisons with earlier years, these amounts should therefore be added back in. Regulated investment company net long-term capital gain reduced by net short-term capital loss excluded from the statistics for net income (less deficit) were: for 1990, \$7.5 billion; for 1991, \$12.8 billion; for 1992, \$20.9 billion; and, for 1993, \$33.3 billion. S Corporation net income (less deficit) excluded from the statistics for 1992 and 1993 was estimated at \$12.1 billion for each year. Data with which to estimate the S Corporation net income (less deficit) excluded from the statistics for 1988-1991 were not tabulated. (For additional information about S Corporation net income, see Statistics of Income Bulletin, "S Corporations, 1992," Spring 1995, Volume 14, Number 4, and "S Corporation Returns, 1993," Spring 1996, Volume 15, Number 4.)
- [17] For most years, "income subject to tax" (the corporate tax base) exceeds "net income (less deficit)" in the statistics, chiefly because of the deficits reported on returns without net income. Moreover, it is the sum of the several tax bases applicable over time to different classes of corporations, not all of which were directly related to net income. Income subject to tax thus includes the "taxable income" base used by most companies (and defined for the statistics as net income minus certain statutory special non-business deductions, such as for intercorporate dividends received and "net operating losses"): prior to 1988, a variation of this base in combination with net long-term capital gains in certain situations where the lower capital gains tax applied; and the

special tax bases applicable to S Corporations (otherwise taxed through their shareholders), insurance businesses, and certain investment companies. Profits of Domestic International Sales Corporations or Interest-Charge Domestic International Sales Corporations (depending on the year) were tax-deferred until distributed, actually or constructively, to parent businesses, and those of S Corporations were mostly taxed through their individual shareholders. Therefore, the net income of all these corporations is excluded from income subject to tax for years for which data for these companies are included in the statistics (see also footnote 1).

- [18] For 1980, includes tax from recapture of Work Incentive Program (WIN) credit; starting with 1985, Personal Holding Company tax; after 1987, tax on "branch profits" of foreign corporations with U.S. operations; and, after 1988, certain lesser taxes, including special taxes applicable to real estate investment trusts and foreign corporations with U.S.-source income.
- [19] Different tax rate structures applied for Tax Years 1979-1981, 1982, 1983-1986, and 1987-1993. In general, starting with tax years beginning in 1987, "alternative tax" was repealed. This tax included a maximum rate on net long-term capital gains that produced a tax that was less than that produced by the regular tax rates.
- [20] Effective during 1987, the "alternative minimum tax" replaced the "minimum tax" (formerly referred to in the statistics as the "additional tax for tax preferences"). The tax computation was modified effective with Tax Years 1983, 1984, and 1990. The alternative minimum tax rate exceeded that applicable under the former minimum tax.
- [21] Starting with the 1985 statistics, general business credit includes alcohol fuel, investment, jobs and employee stock ownership plan (ESOP) credits which were reported separately for previous years. Also included are the research credit (starting 1986) and the low-income housing credit (starting 1987). With exceptions, investment credit was repealed effective 1986; employee stock ownership plan contributions credit was repealed effective 1987. For changes in definitions of component credits, see Statistics of Income—Corporation Income Tax Returns, for the years concerned.

and Statistics of Income—Corporation Income Tax Returns, appropriate years. Statistics of Income data are subject to sampling error; tax law and tax form changes affect the year-to-year comparability of the data. See the specific Statistics of Income reports for a description of sampling error and of the changes mentioned above.

# Table 16

- [1] Total adult deaths represent those of individuals age 20 and over, plus deaths for which age was unavailable.
- [2] Prior to 1982, number of "taxable estate tax returns" by year of death is only approximate because, while the majority of returns filed in a given calendar year represent estates of decedents who died in the immediately preceding year, many represent estates of decedents who died in earlier years. Therefore, the number of taxable returns shown for 1976 decedents is actually the number of taxable returns filed in 1977, regardless of year of death. Starting with 1982, statistics by year of death are more accurate because they are based on the year of death reported on return filings over a period of successive years.

Year-to-year comparability is affected by changes in the gross estate filing threshold which is based on date of death: 1934 (\$50,000); 1935 (\$50,000 changing to \$40,000); 1942 (\$40,000 changing to \$60,000); 1943 (\$60,000); 1977 (\$120,000); 1978 (\$134,000); 1979 (\$147,000); 1980 (\$161,000); 1981 (\$175,000); 1982 (\$225,000); 1983 (\$275,000); 1984 (\$325,000); 1985 (\$400,000); 1986 (\$500,000); and 1987 (\$600,000).

SOURCE: For years after 1953, Statistics of Income— Estate Tax Returns; Estate and Gift Tax Returns; Fiduciary, Estate and Gift Tax Returns; and unpublished tabulations, depending on the year. For years prior to 1954, Statistics of Income—Part 1. Adult deaths are from the National Center for Health Statistics, Public Health Service, U.S. Department of Health and Human Services, Vital Statistics of the United States, unpublished tables.

# Tables 17 and 18

[1] Collections include that portion designated for the Presidential election campaign fund by taxpayers on their income tax returns. Also included is the income tax collected from estates and trusts.

Income tax from estates and trusts collected in 1994,

was \$6.2 billion; *in* 1993 was \$6.0 billion; *in* 1992, \$6.1 billion; *in* 1991, \$4.8 billion; *in* 1990, \$5.9 billion; *in* 1989, \$6.0 billion; *in* 1988, \$6.5 billion; and, *in* 1987, \$8.4 billion. Presidential election campaign designations amounted to \$69.7 million *in* 1994, \$27.7 million *in* 1993; \$29.6 million *in* 1992, \$32.3 million *in* 1991; \$32.5 million *in* 1990; \$32.3 million *in* 1989; \$33.2 million *in* 1988; and \$33.2 million *in* 1987.

Refunds include the refundable portion of the earned income credit; see footnote 4, Table 2. Individual income tax refunds are net of offsets under laws which require IRS to act as collecting agent for delinquent payments owed various U.S. Government agencies under specific programs; see Table 19.

- [2] Includes various taxes applicable to tax-exempt organizations, including the tax on "unrelated business income." Total taxes collected from tax-exempt organizations were \$372.4 million in 1994, \$173.6 million in 1993, \$181.6 million in 1992, \$155.6 million in 1991, \$127.9 million in 1990, \$115.6 million in 1989, \$137.5 million in 1988, and \$119.9 million in 1987.
- [3] Excise taxes are imposed on selected products. services and activities, such as on alcohol and tobacco products and on gasoline. Statistics shown in Table 17 have been revised, starting with Fiscal Year 1988, to include alcohol and tobacco taxes, collection of which was transferred from the Internal Revenue Service to the Bureau of Alcohol. Tobacco, and Firearms, starting with that year. Collections and refunds of manufacturers tax on recreational products include taxes on firearms, responsibility for which was transferred from the Internal Revenue Service to the Bureau of Alcohol, Tobacco, and Firearms starting January 1991. Collections exclude taxes on cargoes, paid to the U.S. Customs Service; however, refunds include these taxes.
- [4] Employment taxes include payroll taxes levied on salaries and wages, such as social security, railroad retirement, and unemployment taxes; plus the self-employment (social security) tax imposed on "self-employment income."

NOTES: Refunds in Table 18 are associated with the taxes (including alcohol, tobacco, and firearms taxes) as described in footnotes 1-4, Table 17. Collections (or refunds) are those made during time periods indicated,

regardless of the year or other period during which the tax liability was incurred (or to which the refund applied).

Collections represent the gross amounts before refunds and include amounts paid with the tax return; prior to filing the return (as applicable, income tax withheld by employers and estimated tax payments); and subsequent to filing the return (chiefly the result of initial return processing or of examination and enforcement activities). Collections also include interest and penalties.

Refunds result chiefly from tax overpayments determined at time of filing a return. Also included are amounts subsequently determined as due the taxpayer as a result of an amended return or a claim for refund (including those produced by "net operating loss" and other carryback adjustments from future taxable years); or as a result of initial return processing or of IRS examination and other activities.

All refund data include interest paid by IRS (in 1994, \$3.1 billion, in 1993, \$2.1 billion; in-1992, \$3.2 billion; in-1991, \$2.8 billion; in 1990, \$2.4 billion; in 1989, \$0.5 billion; in 1988, \$0.4 billion; and, in 1987, \$0.4 billion).

Starting with Fiscal Year 1988, additional detail on manufacturers excise taxes, retail and special fuel taxes, and miscellaneous excise taxes is available in the fourth quarter Internal Revenue Report of Excise Taxes; previously this information was published in the Internal Revenue Service Annual Report or starting with Fiscal Years 1993-1994, the Internal Revenue Service Data Book. For additional detail on alcohol, tobacco, and firearms taxes, see the Statistical Release, Alcohol and Tobacco Tax Collections, Bureau of Alcohol, Tobacco, and Firearms, U.S. Department of the Treasury.

SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Assistant Commissioner (Taxpayer Services), Customer Service Branch.

### Table 19

- [1] Represents repayments to specific Federal agencies for debts, such as student loans, mortgage and loan foreclosures, dishonored checks, and overpayments of benefits. There was no refund offset program prior to Fiscal Year 1982.
- [2] After 1990, number of offsets includes adjustments for injured spouse claims filed with the offset claim.
- [3] Only amounts rounded to thousands of dollars are available for 1982 and 1983. Although data for 1982 are not shown, the total number and amount

- were 273,423 offsets totaling \$171,300,000 (in full dollars, rounded), all of which was in connection with the Aid to Families with Dependent Children (AFDC) program administered by the Social Security Administration, U.S. Department of Health and Human Services.
- [4] Net amount collected after injured spouse claims and after processing of reversal claims; excludes fees charged by the Internal Revenue Service and Financial Management Service, U.S. Department of the Treasury.
- [5] Also includes repayments to the Public Health Service (starting with 1987) and to the Social Security Administration, U.S. Department of Health and Human Services (starting with 1992).
- [6] Represents repayments to State treasuries for funds disbursed to families receiving State assistance.
- [7] Represents repayments to State treasuries for distribution to custodial parents.

SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Annual Report, Commissioner and Chief Counsel, for Fiscal Years 1982 and 1983; for all other years, Assistant Commissioner (Taxpayer Services), Customer Service Branch.

# Table 20

- [1] For 1970 and 1975, the fiscal year was defined as July of the previous calendar year through June of the year noted. Starting with 1980, the fiscal year was redefined as October of the previous calendar year through September of the year noted. (For Fiscal Year 1976, data are not shown for the interim period, July-September 1976.)
- [2] Alcohol and tobacco taxes each include special (occupational) taxes prior to Fiscal Year 1988. Starting with Fiscal Year 1988, occupational taxes are excluded from the separate amounts shown for alcohol and for tobacco taxes, although they are reflected in the combined total for *all* alcohol and tobacco taxes.
- [3] Also includes lubricating oil taxes. Effective January 7, 1983, taxes on lubricating oil were repealed.
- [4] Effective January 1, 1984, taxes on tubes and tread rubber were repealed.
- [5] Effective January 7, 1983, the manufacturers excise taxes on parts and accessories for trucks and buses, which are included in this classification, were

- repealed. Beginning with the quarter ending December 1983, taxes on motor vehicles are excluded.
- [6] Starting with the quarter ended December 1983, includes manufacturers excise taxes on motor vehicles and, starting with the quarter ended March 1990, Leaking Underground Storage Tank Trust Fund tax (except for the tax on fuel used in aviation, which is classified under environmental excise taxes). Also, starting with the quarter ended June 1991, includes the luxury taxes on automobiles, boats, aircraft, jewelry, and furs. Except for the tax on automobiles, these taxes were repealed effective January 1993.
- [7] Repealed effective August 23, 1988. Amounts reported for more recent time periods result from amended filings, delinquent taxes, examination activities, and refunds of tax deposited in excess of tax liabilities.
- [8] Environmental "Superfund" tax expired September 1985, but was reimposed January 1987. Data include Oil Spill Trust Fund and ozone-depleting chemical taxes, effective January 1990. Also includes Leaking Underground Storage Trust Fund tax for quarters ended March 1988 through December 1989; thereafter, except for the tax on aviation fuel use, this tax is classified under special fuels tax.

NOTE: Amounts reported for specific excise taxes are the total tax *liabilities* reported on returns processed during the period shown and thus differ from amounts collected during the same period through deposits and through payments with the returns, some of which were processed in other quarters. Gross excise tax *collections* are shown in Table 17.

### Table 21

[1] Form 1040 is the long form, and Form 1040A, one of the two short forms. Prior to 1994, Form 1040EZ, the other short form, was for single taxpayers with no dependents; starting with 1994, certain married taxpayers with no dependents could also file on this form. Schedule C is for reporting non-farm sole proprietorship business income and deductions, and Schedule F is for reporting farm sole proprietorship income and expenses. Totals for Forms 1040,

- 1040A, and 1040EZ, as well as totals for nonbusiness Form 1040 returns with Schedules C or F attached, include "paper" returns, plus "standard" electronically-filed (ELF) returns (usually filed by tax preparers) starting with 1986. Starting with 1992, these totals also include returns filed by telephone ("TeleFile"). Form 1040PC represents "paper" Form 1040, 1040A, or 1040EZ returns filed by taxpayers (or tax preparers) using an IRSapproved computer software-generated format, rather than a specific tax form. Calendar Year 1992 is the first for which this "form" applied. The last category under individual income includes Form 1040C (departing alien) in years before 1992; 1040NR (nonresident alien); 1040PR (self-employment tax, Puerto Rico); and 1040SS (self-employment tax, U.S. Virgin Islands, Guam, and American Samoa); but excludes Form 1040X (amended return).
- Form 1120 is the basic corporation income tax return; Form 1120A is the short form; and Form 1120S is for S Corporations (certain small companies electing to be taxed through their shareholders, no more than 35 shareholders starting with 1983, and no more than 10, for earlier years). "Other" includes Forms 1120F (most foreign companies with U.S. income); 1120L (life insurance companies) starting in 1992 (included in the statistics for Form 1120 in the earlier years); 1120 POL (certain political associations); 1120H (homeowners associations); 1120-FSC (Foreign Sales Corporations or FSC's) starting in 1986; starting in 1988, 1120-REIT for real estate investment trusts, 1120-RIC for regulated investment companies (both of which formerly filed on Form 1120), and 1120-PC for property and casualty insurance companies (which formerly filed on Form 1120 or 1120M, described below). "Other" also includes Form 1120 DF (for designated funds) starting in 1988; and for years before 1988, Form 1120M, now discontinued, for mutual non-life insurance companies which now file on Form 1120 or Form 1120-PC (and are included in the statistics for Form 1120 in the earlier years). "Other" excludes Forms 1120-DISC for Domestic International Sales Corporations or DISC's, discontinued after 1985 and mostly replaced by FSC's (see above); 1120 IC-DISC for Interest-Charge Domestic International Sales Corporations, which replaced certain DISC's after 1985; and 1120X, amended returns.
- [3] Form 1041 is the regular income tax return filed for

- estates and trusts. For 1988-1990, includes Form 1041S (short form). For 1970, includes Form 1041A (trust accumulation of charitable trust) information return.
- [4] Form 706 is the regular estate tax return; Form 706NA is for U.S. estates of nonresident aliens; Forms 706 GS(D) and 706 GS(T) are for estate tax returns for which the generation-skipping transfer tax applies.
- [5] Form 990 is for tax-exempt organizations, except private foundations (Form 990-PF). Form 990EZ is the short form. Form 990-T is the income tax return filed for businesses conducted by tax-exempt organizations. Form 990-C is for farmers' cooperatives. Form 4720 is for computing the special excise taxes applicable to certain private foundations and Form 5227 is for split-interest trusts treated as private foundations.

SOURCE: U.S. Department of the Treasury, Internal Revenue Service, Research Division, Projections and Forecasting Group.

# Table 22

[1] Number of returns with a paid signature is based on different sources, depending on the year. Data for 1993 are based on the Statistics of Income sample. Data for 1989-1992 are from the Individual Master File of all individual income taxpayers, with the following exceptions: the number of returns with itemized deductions; and, starting with 1990, the number of returns filed electronically. These latter numbers were estimated from the Statistics of Income—Taxpayer Usage Study (TPUS) samples of returns filed during the first 4 months of the filing year, and, for 1992, from the full Statistics of Income

- sample of returns received throughout the entire filing year.
- [2] Data on electronically-filed returns are included in the counts of Form 1040 returns shown above in Table 22, for all years. For Tax Years 1990 and 1991, data are based on the TPUS samples (see footnote 1) of returns filed, extended to cover the first 8 months of the filing years. No adjustment was made for the returns filed after the first 8 months on the assumption that few were likely to have been filed electronically during these months. For Tax Years 1992 and 1993, data are based on the full Statistics of Income samples of returns filed throughout the entire filing year.
- [3] Data on IRS taxpayer assistance programs are actually for the fiscal year. In general, assistance rendered in a given fiscal year may be associated with returns due on April 15th of that fiscal year and is, therefore, for the tax year ending with the previous December. As a result, data in Table 22 on taxpayer assistance, shown as for Tax Year 1993, for example, are actually for Fiscal Year 1994.

NOTE: Data on IRS assistance represent taxpayers contacts, unless otherwise indicated. Some taxpayers are contacted more than once. The number of taxpayers assisted (in contrast to the number of taxpayers contacted) is not known.

SOURCE: Data on paid preparers were obtained from Statistics of Income; and from the Corporate Systems Division, Individual Systems Branch. Data on IRS assistance were obtained from the *Internal Revenue Service Annual Reports* for Fiscal Years 1990 through 1992; and *Internal Revenue Service Data Book*, 1993/1994.

# **SOI Sampling Methodology and Data Limitations**

**Appendix** 

his appendix discusses typical sampling procedures used in most Statistics of Income (SOI) programs.

Aspects covered briefly include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports (see the References at the end of this appendix). More technical information is available, upon request, by writing to the Director, Statistics of Income Division CP:R:S, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608.

# **Sample Criteria and Selection of Returns**

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are filed and processed for tax purposes, they are assigned to sampling classes (strata) based on criteria such as: industry, presence or absence of a tax form or schedule, accounting period, State from which filed, and various income factors or other measures of economic size (total assets, for example, is used for the corporation and partnership statistics). The samples are selected from each stratum over the appropriate filing periods. Thus, sample selection can continue for a given study for several calendar years — 3 for corporations because of the prevalence of fiscal (non-calendar) year reporting. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fixed. This means, in practice, that both the population and the sample size can differ from that planned. However, these factors do not compromise the validity of the estimates.

The probability of a return being designated depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include the number of returns in the stratum, the diversity of returns in

Information for this appendix was compiled by Bettye Jamerson, Special Studies and Publications Branch, under the direction of Beth Kilss, Chief, Publications Section. Major contributions were made by Paul McMahon, Statistical Computing Branch.

the stratum and interest in the stratum as a separate subject of study. All this is subject to constraints based on the estimated cost or the target size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master Files based on the taxpayer identification number (TIN), which is either the social security number (SSN) or the employer identification number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise, it is counted (for estimation purposes), but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TIN's designated from one year's sample are for the most part selected for the next year's, so that a very high proportion of the returns selected in the current sample are from taxpayers whose previous years' returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

# **Method of Estimation**

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. Weights are, in general, computed by dividing the count of returns filed for a given stratum by the count of sample returns for that same stratum. "Weights" are used to adjust for the various sampling rates used — the lower the rate, the larger the weight. For some studies, it is possible to improve the estimates by subdividing the original sampling classes into "post-strata," based on additional criteria or refinements of those used in the

original stratification. Weights are then computed for these post-strata using additional population counts. The data on each return in a stratum are multiplied by that weight. To produce the tabulated estimates, these weighted data are summed to produce the published statistical totals.

Sample returns are designated by computer from the IRS Master Files based on the taxpayer identification number.

# SOI Sampling Methodology and Data Limitations

# **Sampling Variability**

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates

In transcribing and tabulating data from tax returns, checks are imposed to improve the quality of the statistics. derived from the different samples usually vary. The standard error of the estimate is a measure of the variation among the estimates from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the pos-

sible samples. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in percentage form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its coefficient of variation to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 2 percent, then the following arithmetic procedure would be followed to construct a 68 percent confidence interval estimate:

150,000 (sample estimate)

x 0.02 (coefficient of variation)

= 3,000 (standard error of estimate)

then:

150,000 (sample estimate)

+ or - 3,000 (standard error)

 $= \{147,000, 153,000\}$  (68 percent confidence interval).

Based on these data, the interval estimate is from 147 to 153 thousand returns. This means that the average estimate of the number of returns lies within an interval computed in this way. Such an estimate would be correct for approximately two-thirds of all possible samples similarly selected. To obtain this interval estimate with 95 percent confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Further details concerning sample design, sample selection, estimation method, and sampling variability for a particular SOI study may be obtained on request by writing the Director, Statistics of Income Division, at the address given above.

# **Nonsampling Error Controls and Limitations**

Although the previous discussion focuses on sampling methods and the limitations of the data caused by sampling error, there are other sources of error that may be significant in evaluating the usefulness of SOI data. These include taxpayer reporting errors, processing errors, and effects of an early cut-off of sampling. More extensive information on nonsampling error is presented in SOI reports, when appropriate.

In transcribing and tabulating the information from the returns or forms selected for the sample, checks are imposed to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during statistical "editing" in order both to improve data consistency from return to return and to achieve definitions of the data items that are more in keeping with the needs of major users. In some cases not all of the data are available from the tax return as originally filed. Sometimes the missing data can be obtained through field follow-up. More often, though, they are obtained through imputation methods. As examples, other information in the return or in accompanying schedules may be sufficient to enable an estimate to be made; prior-year data for the same taxpayer may be used for the same purpose; or data from another return for the same year that has similar characteristics may be substituted. Research to improve methods of imputing data that are missing from returns continues to be an ongoing process [1].

Quality of the basic data abstracted from the returns is subjected to a number of quality control steps including 100-percent key verification. The data are then subjected to many tests based on the structure of the tax law and the improbability of various data combinations. Records failing these tests are then subjected to further review and any necessary corrections are made. In addition, the Statistics of Income Division in the National Office conducts an independent reprocessing of a small subsample of statistically-processed returns as a further check [2].

Finally, before publication, all statistics are reviewed

# SOI Sampling Methodology and Data Limitations

for accuracy and reasonableness in light of provisions of the tax laws, taxpayer reporting variations, as well as limitations, economic conditions, comparability with other statistical series, and statistical techniques used in data processing and estimating.

# **Tabular Conventions**

Estimates of frequencies and money amounts that are considered unreliable due to the small sample size on which they are based are noted in SOI tables. The presence of the indicator means that the sampling rate is less than 100 percent of the population and that there are fewer than 10 sample observations available for estimation purposes.

A dash in place of a frequency or amount indicates that no sample return had that characteristic. In addition, a dash in place of a coefficient of variation for which there is an estimate indicates that all returns contributing to the estimate were selected at the 100-percent rate.

Whenever a weighted frequency in a data cell is less than 3, the estimate is either combined with other cells or deleted in order to avoid disclosure of information about individual taxpayers or businesses. These combinations and deletions are indicated in the tables.

# **Notes**

[1] See, for example, Hinkins, Susan M., "Matrix Sampling and the Effects of Using Hot Deck Imputation," in 1984 Proceedings of the American Statistical Association, Section on Survey Research Methods. Other research efforts are included in Statistical Uses of Administrative Records: Recent Research and

- Present Prospects, Volume 1, Internal Revenue Service, March 1984.
- [2] Quality control activities for all SOI studies are published from time to time in a series of separate reports. These reports provide detailed information relating to quality in all phases of SOI processing.

General Statistical Information	: (202) 874-0410	Fax: (202) 874-0964
Project	Primary Analysts	Frequency and Program Content
Americans Living Abroad: 1991 Program	Sarah Nutter	This periodic study is conducted every 4 years (every 5 years, after 1991). It covers foreign income and taxes paid, and foreign tax credit shown on individual income tax returns. Data are by size of adjusted gross income and country.
Corporation Foreign Tax Credit: 1993 Program 1994 Program	Bill States Robin Robison	This annual study provides data on foreign income and taxes paid and foreign tax credit reported on corporation income tax returns. Data are classified by industry and country.
Corporation Income Tax Returns: 1993 Program 1994 Program 1995 Program	Ellen Legel Glenn Hentz Paula Miller Nina Shumofsky Patty Treubert John McGrath	Basic data are produced annually and cover complete income statement, balance sheet, tax, and tax credits, and detail from supporting schedules. Data are classified chiefly by industry group or asset size.
Environmental Excise Taxes (Superfund) Study: 1994 Program 1995 Program	Sara Boroshok	The Superfund Amendments and Reauthorization Act of 1986 (SARA) replaced the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), authorizing the collection of environmental taxes, a type of excise tax. This study, published annually, is the only source of data that provides detailed tabulations by type of chemical.
Estate Tax Returns: 1992-1994 Program	Barry Johnson Martha Eller	This annual study includes information on gross estate and its composition, deductions, and tax; and information on the age, sex, and marital status of the decedents. Basic estate tax return data by year in which returns are filed are produced every year. Also included are data on nonresident aliens who had more than \$60,000 of assets in the United States. Other statistics are available on a year-of-death basis (approximately every 3 years). The most recent study is based on decedents who died in 1989 with returns filed in 1989-91.
Exempt Organizations Business Income Tax Returns: 1992 Program 1993 Program	Peggy Riley	This annual study includes tabulations of "unrelated business" income and deductions for organizations classified as tax-exempt under the Internal Revenue Code. The data file will also be linked with the Form 990 data file of tax-exempt organizations.
Foreign Controlled Corporations: 1992 Program 1993 Program 1994 Progam	Dan Holik	This annual study includes data on transactions between U.S. corporations and their foreign owners. Data are classified by country and industry.

Project	<b>Primary Analysts</b>	Frequency and Program Content
Foreign Corporations:		
1993 Program	Maggie Lewis	This annual study (as of 1992) provides data on activities
1994 Program	Kathryn Green	of foreign corporations that are controlled by U.S. corporations. Data are classified by industry and country.
		orations. Data are classified by industry and country.
Foreign Recipients of U.S. Income:		This annual study provides data by country on income
1993 Program	Denise Freites	paid to nonresident aliens and the amount of tax withheld
1994 Program		for the U.S. Government.
Foreign Sales Corporations (FSC):		These corporations replaced the Domestic International
1992 Program	Dan Holik	Sales Corporation, or DISC, as of 1985. Balance
		sheet, income statement, and export-related data are tabulated annually through 1987, and then on a 4-year
		cycle after 1992.
Foreign Trusts:	****	This periodic study, conducted every 4 years, provides data
1994 Program	Robin Robison	on foreign trusts that have U.S. persons as grantors,
		transferors, or beneficiaries. Data include country where trust was created, value of transfer to the trust, and the year
		the trust was created.
Individual Income Tax Return		Microdata magnetic tape files, produced annually, contain
Public Use File	Mario Fernandez	detailed information obtained from the individual statistics
		program, with identifiable taxpayer information omitted to make the file available for public dissemination, on a
		reimbursable basis. (In addition to microdata files, specific
		tabulations from them are produced, also on a reimburs- able basis.)
		avic vasis.)

Project	Primary Analysts	Frequency and Program Content
International Boycott Participation: 1994 Program	Denise Freites	This study provides data on business operations of U.S. persons in boycotting countries, as well as the requests and agreements to participate in, or cooperate with, international boycotts not sanctioned by the U.S. Government.
Migration Flow and County Income Data	Emily Gross	Migration flow data (based on year-to-year changes in individual income tax return addresses) and county or State income data are available annually on a reimbursable basis. The most recent data are for 1992-93.
Nonprofit Charitable and Other Dryanizations: 1992 Program 1993 Program	Cecelia Hilgert	This annual study includes balance sheet and income statement data for organizations classfied as tax-exempt under subsections 501(c)(3)-(9) of the Internal Revenue Code.
Occupation Studies	Terry Nuriddin	This periodic study, based on availability of outside funding, is designed to classify individual income tax returns by occupation and to develop a dictionary of occupation titles that can be used to enhance the economic data of many other individual income tax return studies.
Partnership Returns of Income	Tim Wheeler	Basic data, produced annually, cover income statement, balance sheet, and details from supporting schedules.  Data are classified chiefly by industry group.
Partnership Withholding Study: 1993 Program	Chris Carson	This annual study includes data on U.S. partnership payments to foreign partners. Data are classified by country and recipient type.
<b>Personal Wealth Study:</b> 1992 Program	Barry Johnson Martha Eller	This periodic study provides estimates of personal wealth of top wealthholders that are generated from estate tax return data using the "estate multiplier" technique, in conjunction with both filing-year and year-of-death estate data bases. The most recent data (1989) are based on returns filed from 1989 to 1991. The 1992 program will be based on returns filed from 1992-1994.
Private Foundations: 1992 Program 1993 Program	Susan Eastep Paul Arnsberger	This annual study includes balance sheet and income statement data for private foundations and charitable trusts filing a Form 990-PF.

General Statistical Information	n: (202) 874-0410	Fax: (202) 874-0964
Project	Primary Analysts	Frequency and Program Content
S Corporations	Amy Gill Susan Wittman	Annual study data are collected for the income statement, balance sheet, and from supporting schedules. Data are classified by industry group or by asset size.
Sales of Capital Assets: 1985 Program 1985-1994 Panel Study	Barbara Livington Janette Wilson Laura Prizzi	This periodic study provides detailed data on the sales of capital assets reported on Schedule D of the individual income tax return, sales of residences, and personal or depreciable business property.
		A panel study provides the same data on capital asset transactions for a subsample of the returns in the Sales of Capital Assets basic study, over a period of years.
Sales of U.S. Real Property Interests by Foreign Persons: 1994 Program	Chris Carson	This annual study will provide data on transfers of U.S. real property interests, when these interests are acquired from foreign persons. Data include the amount realized on transfers, U.S. tax withheld, and the country of foreign persons.
Sole Proprietorships: 1993 Program 1994 Program 1995 Program	Michael Strudler	Basic data, produced annually, cover business receipts, deductions and net income reported on Schedule C (for nonfarm proprietors), by industry group. Similar data from Schedule F (for farmers) are available on an occasional basis.
State Data: 1985 Program 1988 Program	Mario Fernandez	Special tabulations of selected individual income, deduction, and tax data by State are produced on a reimbursable basis. (The data file for 1988 is the most recent.)
Statistical Subscription Services: Corporation Source Book	Sandy Byberg	Annual data by more detailed industry groups than are used for the regular corporation statistics are produced by asset size.
Tax-exempt Bond Issues: 1992-1994 Program	Marvin Schwartz	This annual study provides information on private activity and governmental bond issues by type of property financed, size of face amount, and State.
Taxpayer Usage Study: 1995 Program	Mike Weber	Basic data, produced annually, provide weekly frequencies of specific line entries made by taxpayers, the use of various return schedules and associated forms, and general characteristics of the individual taxpayer population for returns received during the primary filing season (January through April).
U.S. Possessions Corporations: 1993 Program 1995 Program	Randy Miller	This periodic study, planned for every 2 years, provides data on income statements, balance sheets, tax, and "possessions tax credit" for "qualifying" U. S. possessions corporations. (Most of these corporations are located in Puerto Rico.)

# **Publications & Tapes**

# **Statistical Information Services**

For questions about the availability of SOI data, other statistical services, or release dates for new publications, please contact the Statistical Information Services Office on (202) 874-0410 or FAX (202) 874-0964. As its name implies, this office is best able to answer questions about data. It is not the place to call to obtain tax forms or information about the status of an individual's tax refund or audit examination. Also, all requests from the media should be directed to the IRS Media Relations Branch, Communications Division on (202) 622-4000.

The following Statistics of Income reports and tapes can be purchased from the Statistics of Income Division—(unless otherwise indicated). **Prepayment is required, with checks made payable to the IRS Accounting Section.** Please write:

# Compendiums

# Studies of Tax-Exempt Organizations, 1974-1987

-Publication 1416 - Price \$26.00

This publication presents 22 articles from Statistics of Income studies on tax-exempt organizations. The articles emphasize important issues within the nonprofit sector, and also include several other articles previously unpublished in the *SOI Bulletin*, as well as papers published in proceedings of the American Statistical Association and the Independent Sector Research Forum. Topics featured are:

- nonprofit charitable organizations (primarily charitable, educational, and health organizations);
- private foundations and charitable trusts; and
- unrelated business income of exempt organizations.

# **Studies of Tax-Exempt Organizations, 1986-1992**

Publication 1416 - Price \$26.00

This is the second volume in a series of Statistics of Income (SOI) publications on tax-exempt, nonprofit organizations. The volume includes data covering 1986-

1992 and contains 12 previously-published articles from SOI studies, including articles from the SOI Bulletin, as well as papers prepared for the Journal of Nonprofit Management and Leadership, Trusts and Estates, the Independent Sector Research Forum, the National Research Council's Committee on National Statistics, and the American Statistical Association.

# Studies of International Income and Taxes, 1984-1988

Publication 1267 - Price \$26.00

This report presents information from 13 Statistics of Income studies in the international area (many of thempreviously published in the SOI Bulletin), including:

- foreign activity of U.S. corporations;
- activity of foreign corporations in the United States;
- foreign controlled U.S. corporations;
- statistics related to individuals, trusts, and estates; and
- data presented by geographical area or industrial activity, as well as other classifiers.

# Compendium of Federal Estate Tax and Personal Wealth Studies

Publication 1773 - \$26.00

Part I of this report focuses on data from estate tax returns, describing decedents, their beneficiaries, and the composition of their estates. It contains a methodological discussion of the strategy used in weighting the sample data for the estate studies and also statistics on selected components of decedents' estates, 1916-1990. Information on charitable giving is also included.

Part II presents a series of articles describing the estatemultiplier technique and its applications for personal wealth estimates, estimates of personal wealth for selected years, 1962-1989, as well as a discussion of the relationship among realized income, wealth, and well-being.

# **Reimbursable Services**

# **Corporation Source Book, 1993**

Publication 1053 - Price \$175

This 511-page document presents detailed income state-

# **Publications & Tapes**

ment, balance sheet, tax, and selected other items, by major and minor industrial groups and size of total assets, for all returns and separately for returns with net income. The report, which underlies the *Statistics of Income-Corporation Income Tax Returns* publication, is part of an annual series and can be purchased in its entirety or by page. (The Source Book is also available on 35mm microfilm for \$175. Issues prior to 1982 are for sale at \$150 per year.) A magnetic tape or diskette containing the tabular statistics for 1993 can be purchased for \$1,500.

# **Public-Use Magnetic Tape Microdata Files**

(Price depends on the request.)

This includes individual income tax returns for 1979-1992. A limited number of files for 1989 are also available on CD-ROM. (Individual income tax returns for 1966-1978 are available for sale by writing to the Center for Electronic Records (NNX) of the National Archives and Records Administration, Washington, DC 20408.) Files containing more limited data for each State are also available for 1985 and 1988. All of these files have been edited to protect the confidentiality of individual taxpayers. Files for private foundations for 1982-1983 and 1985-1991 and nonprofit charitable organizations for 1982-1983 and 1985-1990 are also available from Statistics of Income. The individual, private foundation, and charitable organization files are the only microdata files that can be released to the public.

# **Migration Data**

(Price depends on the request.)

Compilations are available showing migration patterns, from where to where, by State and county, based on year-to-year changes in the individual income tax return address. Data are also available for selected time periods (according to the years in which the returns were filed) between 1978 and 1994 and include counts of the number of returns and the number of personal exemptions (which can be used to approximate population). Tabulations are available as hard copy for all years, on magnetic tape for all years except 1983, and diskette starting with 1989. (Compilations showing State-to-State migration flows only are also accessible through the SOI electronic bulletin board starting with 1988; see next page.)

# **County Income Data**

(Price depends on the request.)

Tables present adjusted gross income by source and number of personal exemptions (which can be used to approximate population) reported on individual income tax returns for Income Years 1982 and 1984 through 1993. Data are available as hard copy or on magnetic tape for each year, or on diskette starting with 1988. (County income data starting with 1990 are available on the SOI electronic bulletin board; see next page.)

# **ZIP Code Area Data**

(Price depends on the request.)

Recent statistics are available for Income Year 1991 only, either on computer tape or diskette, showing the number of individual income tax returns, the number of personal exemptions (which can be used to approximate population), adjusted gross income, and income tax, by 5-digit ZIP Code.

# **Other Unpublished Tabulations**

(Price depends on the request.)

Unpublished tabulations are also available, including detailed tables underlying those published in the *SOI Bulletin*. Special tabulations may also be produced, depending on the availability of resources.

# **Other Publications**

The following Statistics of Income publications are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC, by calling (202) 512-1800. The reports may also be obtained by using the order form following this section or write:

Superintendent of Documents P. O. Box 371954 Pittsburgh, PA 15250-7954.

If you determine from the Government Printing Office that any of the next three items is out-of-print, please telephone the Statistical Information Services Office on (202) 874-0410, for assistance.

# **Statistics of Income (S0I) Bulletin**

Quarterly Publication 1136, Stock No. 748-005-00000-5 Subscription price, \$30.00; Single copy price, \$15.00

This series provides the earliest published financial statistics from individual and corporation income tax returns. The *Bulletin* also includes annual data on nonfarm sole

# Publications & Tapes

proprietorships and on partnerships, as well as from periodic or special studies of particular interest to tax analysts and administrators and to economists. Historical tables include data from SOI, as well as on tax collections and refunds by type of tax.

# Statistics of Income – 1992, Corporation Income Tax Returns

Publication 16, Stock No. 048-004-02337-7 Price \$20.00

This report presents data on corporation income tax returns with accounting periods that ended July 1992 through June 1993, that are more comprehensive than those published earlier in the SOI Bulletin.

Presents information on:

Data are classified by:

m receipts:

■ industry;

■ deductions;

■ accounting period;

■ net income:

■ size of total assets; and

■ taxable income;

■ size of business receipts.

- income tax;
- tax credits;
- assets; and
- liabilities.

# Statistics of Income – 1993, Individual Income Tax Returns

Publication 1304, Stock No. 048-004-02334-2 Price \$14.00

This report presents more comprehensive and complete data on individual income tax returns for 1993 than those published earlier in the *SOI Bulletin*.

Presents information on:

Data are presented by:

- sources of income;
- size of adjusted gross
- exemptions;
- income; and
- itemized deductions; and
- marital status.
- tax computations.

The following Statistics of Income publication is available from the Statistics of Income Division by writing to the Director at the address shown at the beginning of this section.

# Turning Administrative Systems Into Information Systems – 1994

Publication 1299 - Free of Charge

This report is the third edition of the IRS' methodology reports series, which documents technological and methodological changes in Statistics of Income programs and other related statistical uses of administrative records. Previous volumes in the series were called Statistics of Income and Related Administrative Record Research. Topics featured are:

- overview of SOI;
- some results from the use of administrative records;

# **SOI Electronic Bulletin Board**

Since June 1992, over 1,100 files have been added to the SOI electronic bulletin board system (BBS) and are available for access. They include data from recent SOI Bulletin publications for returns covering individuals, corporations, partnerships, sole proprietorships and estates. The BBS also contains files on personal wealth and international topics, such as foreign tax credits and Controlled Foreign Corporations, as well as tax collections and refunds from the IRS administrative system.

# IRS Source Book of Detailed Corporation Income Tax Statistics

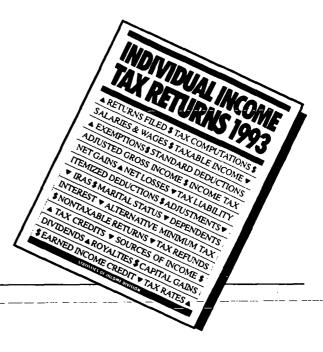

# Statistics of Income -- 1993 Corporation Source Book

This 511-page document presents detailed income statement, balance sheet, tax, and selected other items, by major and minor industrial groups and size of total assets, for accounting periods ending between July 1993 and June 1994. The report, which underlies the Statistics of Income — Corporation Income Tax Returns publication, is part of an annual series and can be purchased in its entirety or by page. A magnetic tape or diskette containing the tabular statistics for 1993 can also be purchased. The information is available on microfilm, as well.

To obtain copies of this report, or supplemental information on both the topics included in this volume and on other SOI products and services, call SOI Statistical Information Services Offices (202) 874-0410; or write to:

Director, Statistics of Income Division CP:R:S Internal Revenue Service P.O. Box 2608
Washington, DC 20013-2608.

# Announcing Latest IRS Report of Individual Income Tax Statistics

Statistics of Income — 1993, Individual Income Tax Returns, Publication 1304, is an annual report which provides statistics on the following:

Presents information on:

- sources of income;
- exemptions; and
- itemized deductions.

Data are presented by:

- size of adjusted gross income; and
- marital status.

The report is divided into six sections:

- Section 1 -- Introduction and changes in the law for 1993, and the 1979 Income Concept.
- Section 2 -- Description of the sample.
- Section 3 -- Tables of detailed aggregate statistics on individual income tax returns.
- Section 4 -- Explanations of the terms used in the tables.
- Section 5 -- 1993 tax forms and instructions.
- Section 6 -- A subject index.

The 209-page report is available for sale through the Government Printing Office -- stock number 048-004-02334-2. If this (or any other) SOI report is out of print, contact SOI's Statistical Information Services Office — at (202) 874-0410 — for assistance.
